Sensorimotor Impairment In The Elderly:

Sensorimotor Impairment in the Elderly George E. Stelmach, Volker Hömberg, 2012-12-06 Proceedings of the NATO Advanced Research Workshop Bad Windsheim Germany September 11 13 1992 *Changes in Sensory Motor Behavior in Aging* A.-M. Ferrandez, N. Teasdale, 1995-12-11 Recently studies on aging processes and age related changes in behavior have been expanding considerably probably due to the dramatic changes observed in the demographics This increase in the overall age and proportion of elderly people has heightened the severity of problems associated with the safety and well being of elderly persons in everyday life Many researchers working on motor control have thus focused more intensely on the effects of age on motor control This new avenue of research has led to programs for alleviating or delaying the specific sensory motor limitations encountered by the elderly e g falls in an attempt to make the elderly more autonomous The aggregation of studies from different perspectives is often fascinating especially when the same field can serve as a common ground between researchers Nearly all contributors to this book work on sensory motor aging they represent a large range of affiliations and backgrounds including psychology neurobiology cognitive sciences kinesiology neuropsychology neuropharmacology motor performance physical therapy exercise science and human development Addressing age related behavioral changes can also furnish some crucial reflections in the debate about motor coordination aging is the product of both maturational and environmental processes and studies on aging must determine how the intricate interrelationships between these processes evolve The study of aging makes it possible to determine how compensatory mechanisms operating on different subsystems and each aging at its own rate compensate for biological degenerations and changing external demands This volume will contribute to demonstrating that the study of the aging process raises important theoretical questions *The American Psychiatric Publishing Textbook of Geriatric Neuropsychiatry* C. Edward Coffey, Jeffrey L. Cummings, 2011 Rev ed of The American Psychiatric Press textbook of geriatric neuropsychiatry 2nd ed 2000 **Human Factors Interventions for the Health Care of Older Adults** Wendy A. Rogers, Arthur D. Fisk, 2001-08-01 Written by experts in the field this book explores the relevance and contributions of the field of human factors to health care It begins with overviews of the field of human factors and the primary research methodologies of that field and goes on to review the cognitive issues that must be considered in the context of the health care environment and the potential for exercises to improve such cognitive functions The remaining chapters cover a range of cutting edge topics including care giving telecommunication issues design of medical devices computer monitoring of patients automated communication systems computer interface issues in general and the use of the Web as a source for health information *Technology for Adaptive Aging* National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Steering Committee for the Workshop on Technology for Adaptive Aging, 2004-04-25 Emerging and currently available technologies offer great promise for helping older adults even those without serious disabilities to live

healthy comfortable and productive lives What technologies offer the most potential benefit What challenges must be overcome what problems must be solved for this promise to be fulfilled How can federal agencies like the National Institute on Aging best use their resources to support the translation from laboratory findings to useful marketable products and services Technology for Adaptive Aging is the product of a workshop that brought together distinguished experts in aging research and in technology to discuss applications of technology to communication education and learning employment health living environments and transportation for older adults It includes all of the workshop papers and the report of the committee that organized the workshop The committee report synthesizes and evaluates the points made in the workshop papers and recommends priorities for federal support of translational research in technology for older adults

Locomotion and Posture in Older Adults Fabio Augusto Barbieri,Rodrigo Vitório,Paulo Cezar Rocha dos Santos,2025-02-19 This book sheds new light on the effects of aging and movement disorders on movement control during walking and postural tasks Understanding these dynamics is more important than ever as we face a future where the number of older adults is projected to double by 2050 The severity of this framework is exacerbated when aging is accompanied by movement disorders such as Parkinson s disease Chorea Multiple Sclerosis Dystonia and Huntington s disease The book explores how complex interactions between musculoskeletal and neural systems are required for efficient execution of daily activities like walking and maintaining posture The chapters in this comprehensive volume address the multifaceted challenges posed by aging and movement disorders in gait and postural control including innovative rehabilitation strategies and the role of artificial intelligence Expert contributors examine how environmental sensorial motor cognitive and individual factors influence locomotor and postural activities Readers will discover cutting edge research findings that address critical questions about planning performance and impairment in these essential functions This book is a must read for anyone seeking to understand and reduce the effects of aging and movement disorders on gait and posture This book is an invaluable resource for clinicians physical therapists occupational therapists psychologists biologists researchers health professionals as well as those involved in physical education and sports medicine It highlights the mechanisms involved in controlling and planning postural and gait tasks in both neurologically healthy older individuals and those who suffer from movement disorders offering new perspectives on interventions and technologies designed to improve understanding or delay impairments due to aging or movement disorders on gait and posture Whether you re a practitioner or researcher in related fields this book equips you with the essential knowledge to enhance the quality of life for older adults facing these challenges

Measurement Issues in Aging and Physical Activity Weimo Zhu,Wojtek

J. Chodzko-Zajko, 2006 Based on the 10th Measurement and Evaluation Symposium Measurement Issues and Challenges in Aging Research Measurement Issues in Aging and Physical Activity considers research from experts around the world relating to the latest questions challenges and techniques in aging and measurement The reference addresses a range of topics in aging research including issues from the fields of kinesiology biology physiology technology urban planning measurement and statistics Measurement Issues in Aging and Physical Activity breaks new ground with a discussion of multicultural factors related to physical activity promotion and intervention Ideas include using culture as a catalyst for active living and using culture based physical activity as an alternative approach to promotion of active living The reference further examines multicultural issues with a look at alternative medicine including an account of a demonstration of qi gong a traditional Chinese exercise from the symposium In addition a new term kinesmetrics is introduced for the field of measurement and evaluation Kinesmetrics is defined as a discipline for developing and applying measurement theory statistics and mathematical analysis to the field of kinesiology The groundbreaking Measurement Issues in Aging and Physical Activity explores subjects in a range of research topics For both veterans and newcomers to the field this reference will be a comprehensive guide to the latest research on aging in measurement and physical activity Publisher description

Cognitive Impairment and Physical Function in Older Adults José Daniel Jiménez García, Daniel Velázquez Díaz, Diego A. Bonilla, Antonio Martínez- Amat, Richard Kreider, Francisco Álvarez Salvago, 2025-08-20 The rapid growth of the aging population is related with prevalent age related cognitive impairments usually associated with problems in quality of life and increased cost of healthcare Older adults with neurocognitive disorders have been identified as having a high risk of falling Nonetheless the relationship of neurocognitive disorders with physical function has been poorly studied Currently there are numerous studies that have analyzed the association between the cognitive status in with physical function in older people In addition relationship said cognitive status with serious problems such as sarcopenia and the risk of falls In this line there are RCTs that are being offered that have demonstrated efficacy on physical and cognitive improvement in older people such as multicomponent exercise programs qigong training and resistance exercise programs **Brain Networks for Studying Healthy and Pathological Aging Mechanisms and Intervention Efficacy** Christos Frantzidis, Ana B. Vivas, Panagiotis D. Bamidis, 2020-11-18 Previous studies showed that both healthy and pathological aging are associated with changes in brain structure and function of the mature human brain The most prominent anatomical alteration are changes in prefrontal cortex morphology volume loss and reduced white matter integrity and hippocampal atrophy Cognitive decline affects mainly the performance of episodic memory speed of sensory information processing working memory inhibitory function and long term memory It has been also proposed that due to the aforementioned changes the aging brain engages in compensatory brain mechanism such as a broader activation of cortical regions mainly frontal rather than specialized activation Evidence suggests that similar changes occur with pathological aging but to a greater extent In this

case information flow is disrupted due to neurodegeneration functional activation of posterior occipito temporal regions is decreased and as a consequence the brain fails to process sensorial input in the ventral pathway and cognitive deficits appear In the last years functional alterations associated with aging have been studied using the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network 1 Organization level 2 amount of local information processing 3 information flow 4 cortical community structure and 5 identification of functional anatomical hubs So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations Previous studies have already employed this mathematical notion and demonstrated that age related neurodegeneration is often accompanied by loss of optimal network organization either due to diminished local information processing or due to progressive isolation of distant brain regions They have also found that changes in network properties may be present even in the preclinical phase which could be taken as a biological marker of disease
