A.S. Grandison, 1996-07-10 From the Editors Preface This book concentrates on the more recent methods and techniques for separating food components and products of the biotechnology industry Each chapter deals with a specific type or area of application and includes information on the basic principles industrial equipment available commercial applications and an overview of current research and development Much of the emphasis is on extraction of macromolecules increasing the added value of foods and recovering valuable components from by products and fermentation media Many of the methods discussed are now in commercial practice while others are being vigorously researched Separation and filtration technology is of major importance in food processing and biotechnology This new book provides a very detailed examination of the most important advanced separation processes now in use Each chapter is prepared by a specialist or specialists in the type of separation discussed Each separation method is related to practical commercial applications Engineering Processes for Bioseparations LAURENCE R. WEATHERLEY, 2013-10-22 The use of biotechnology in chemical synthesis offers up numerous advantages to the engineer in the process industries but it also presents a number of fundamental challenges and difficulties which impinge directly on separation process requirements The use of biochemical separations has grown significantly during the past decade and is especially used in process industries such as healthcare and food processing However it is becoming increasingly more important in areas such as recycling and waste water treatment and as industry shifts towards cleaner processes biochemical separations will continue to grow The two main objectives of this book are to focus on the application of existing separation process techniques to the recovery and purification of biologically derived products and to examine the state of knowledge of new techniques which have future potential Within these objectives the complexities and breadth of problems associated with biological separations are discussed specific engineering techniques are featured and their adaptation to biochemical separations are highlighted

Separations for Biotechnology 2 D. Leo Pyle, 2012-12-06 The challenge of

bioseparations is to isolate and purify identified products from the dilute product broth produced from cell culture Innovation in bioseparations technology is increasingly driven by the requirements imposed by the growing importance of production on a process scale of injectable grade products and economic pressures to improve the efficiency of downstream processing As in other areas of technical change science does not necessarily precede new technology progress results from a complex and messy mixture of advances in understanding ingenious ideas novel techniques and chance discoveries What is certain is that close interaction between academics and practitioners biological scientists and process engineers is needed to solve the problems of bioseparations The Second International Conference on Separations for Biotechnology at Reading UK in September 1990 set out to provide a critical multidisciplinary forum for the discussion of bioseparations This volume contains

the papers presented at the meeting The meeting was organised around six themes with oral and poster presentations on the science and practice of bioseparations technology and the same structure has been kept for this book We have also included the texts of the keynote review paper by Professor Alan Michaels and the introductory review papers specially commissioned for the conference Within each part of this book the review paper is followed by the contributed papers grouped alphabetically by their first author All the original papers published here were accepted for publication after scientific refereeing
