

The neurotransmitter serotonin is involved in regulating many important physiological (body-oriented) functions, including sleep, aggression, eating, sexual behavior, and mood.

Serotonin is produced by serotonergic neurons. Current research suggests that a decrease in the production of serotonin by these neurons can cause depression in some people, and more specifically, a mood state that can cause some people to feel suicidal.

Drugs, however, have many negative side effects. Other options need to be considered. People who are depressed need a safe way to restore the neurochemistry (NC) of their central nervous system.

Serotonin Current Aspects Of Neurochemistry And Function:

Serotonin Bernard Haber, 2012-12-06 The vast growth of knowledge in recent years concerning the functional role of serotonergic systems in central nervous system function prompted the organization of the symposium The organizing committees felt at the onset that the field of serotonin research had grown so rapidly that it would be impossible to cover every aspect of it in individual symposia Thus it was felt that certain areas of research had to be omitted due to time constraints and we extend an apology to the researchers in areas not included in these proceedings Rather it was hoped to provide a balance overview of the field starting with the anatomy of serotonergic systems and proceeding to the level of the serotonergic receptors at the cell membrane and then inside the neuron to discuss the regulation of serotonin biosynthesis and integration within indoleamine systems The functional aspects of serotonergic transmission focused on the emerging role of this amine in the processing of nociceptive information singly or in tandem with other neurotransmitters or neuromodulators A separate symposium dealt with a variety of animal models suitable for the analysis of the role of serotonin in behavior and finally led to the evaluation of serotonin metabolism in the study of abnormal human behavior The editors would like to dedicate these proceedings on Serotonin Current Aspects of Neurochemistry and Function to two pioneers in this field Dr Irving Page and Dr Maurice Rapport

Amino Acid Availability and Brain Function in Health and Disease Gerald Huether, 2013-06-29 The picture on the following page is being reproduced here at the request of the participants in the Advanced Research Workshop Amino Acid Availability and Brain Function in Health and Disease I displayed this limewood carving entitled Neurochemistry during my closing remarks to this extraordinarily stimulating and productive workshop so ably organized by my collaborator Dr Gerald Huether We scientists need two sturdy legs to carry us through all the twists and turns of our academic careers We should also have as it were a reserve leg handy to help us stay upright when this career ends My third leg is wood carving The idea for Neurochemistry came to me in the plane carrying me to the congress of the International Neurochemical Society in Jerusalem We need the hands for our meticulous experimental work and at least one ear to listen to the messages our neurons send us A few years ago it would have been premature to hold a workshop on this subject Now however the time was just right to allow an overview of the status of current research and to point out the promising new openings it has created There is no doubt that the book to be published as a result of this workshop will be for the next years at least the standard text on the subject Heartily thanks to all speakers for their brilliant contributions and to all participants for the lively uninhibited and stimulating discussion

for students of medicine and other practitioners in their respective fields **Neuroreceptor Mechanisms in Brain** Shozo Kito, Tomio Segawa, Richard W. Olsen, 2012-12-06 The Third International Symposium on Neurotransmitter Receptors was held in Hiroshima at a time when the entire field of neurotransmitter receptors in the brain is progressing at an unprecedented pace The symposium also marked my retirement as Professor and Chairman of the Third Department of Internal Medicine Hiroshima University School of Medicine and a new beginning as a Professor of the University of the Air The symposium was remarkably successful and there were enthusiastic responses from scientists all over the world proving that the meeting was timely The selected papers contained in this volume constitute a state of the art survey of the most advanced aspects of neurotransmitter receptor mechanisms in the brain I owe thanks for the great success of the symposium to Prof Richard Olsen of UCLA Prof Tomio Segawa of Hiroshima University Prof Kinuya Kuriyama of Kyoto Prefectural University of Medicine and Prof Masaya Tohyama of Osaka University I express my sincere gratitude to many friends for making this publication possible I especially thank Dr Rie Miyoshi whose devoted efforts as secretary general were vital to the success of the symposium Dr Miyoshi is currently an instructor in the Department of Pharmacology at Tokyo Women's Medical College I would also like to acknowledge the excellent secretarial work of Misses Ritsuko Sato and Yuko Wakita

Neurotransmitter Actions in the Vertebrate Nervous System Michael Rogawski, 2012-12-06 Intercellular communication via bioactive substances occurs in virtually all multicellular systems Chemical neurotransmission in the vertebrate nervous system represents a form of signaling of this type The biology of chemical neurotransmission is complex involving transmitter synthesis transport and release by the presynaptic neuron signal generation in the target tissue and mechanisms for termination of the response The focus of this book is on one aspect of this scheme the diverse electrophysiological effects induced by different neurotransmitters on target cells In recent years astonishing progress has been made in elucidating the specific physiological signals mediated by neurotransmitters in the vertebrate nervous system yet in our view this has not been adequately recognized perhaps because the new concepts have yet to filter into neuroscience textbooks Nevertheless the principles of neurotransmitter action are critical to advances in many areas of neuroscience including molecular neurobiology neurochemistry neuropharmacology physiological psychology and clinical neuroscience It was the need for a sourcebook that prompted us to engage a group of neurophysiologists to prepare the chapters in this volume However there was an additional reason for this book more and more it seemed that the field if not yet having reached maturity at least was approaching adolescence with strengths in some areas and healthy conflicts in others At this stage of development a textbook can help to define a field clarify problems to be resolved and identify areas for future investigation **Neuroreceptors in Health and Disease** J.
