Psychology Alan Poling, Henry Schlinger, Stephen Starin, Elbert Blakely, 2013-03-09 Psychology A Behavioral Overview is an introductory text with an orienting perspective that is frankly behavioral rather than eclectic. This focus is made quite clear in the first chapter of the book but in the remainder it also becomes clear that such a focus permits coverage of most of the topics found in the more common introductory text. Actually the next five chapters dealing with psychology as a science, methodology, evolution, physiology, and learning are in many ways comparable to the treatments provided in more eclectic introductory texts. The behavioral focus and the departure from traditional approaches become most significant in the last six chapters which deal with traditional psychological topics e.g. language, child development, and personality but deal with them systematically in terms of the concepts and principles introduced in the chapters on evolution and physiology and especially in the chapter on learning. Using the concepts provided early in the text to interpret complex aspects of human behavior provides valuable justification for those concepts as well as an opportunity for improved understanding of them. Although students will not make extensive contact with the variety of the theoretical approaches found in the typical text they will become especially competent in the use of behavioral concepts and principles to interpret and understand many of the topics of traditional importance in psychology.

Handbook for Teaching Introductory Psychology Michelle Rae Hebl, Charles L. Brewer, Ludy T. Benjamin, Jr., 2001-08-01 Like its predecessors Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology TOP the official journal of the Society for the Teaching of Psychology Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One Issues and Approaches in Teaching Introductory Psychology contains 52 articles on critical issues such as how to approach the course, understanding students' interests, perceptions, and motives, students' existing knowledge of psychology including their misconceptions, a comparison of introductory textbooks and tips on how to evaluate them, test questions and student factors affecting exam performance, an overview of different forms of feedback, giving extra credit, and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.
