Natural Language Parsing Psychological Computational And Theoretical Perspectives:

Natural Language Parsing David R. Dowty, Lauri Karttunen, Arnold M. Zwicky, 2005-11-24 This is a collection of new papers by leading researchers on natural language parsing In the past the problem of how people parse the sentences they hear determine the identity of the words in these sentences and group these words into larger units has been addressed in very different ways by experimental psychologists by theoretical linguists and by researchers in artificial intelligence with little apparent relationship among the solutions proposed by each group However because of important advances in all these disciplines research on parsing in each of these fields now seems to have something significant to contribute to the others as this volume demonstrates The volume includes some papers applying the results of experimental psychological studies of parsing to linguistic theory others which present computational models of parsing and a mathematical linguistics paper on tree adjoining grammars and parsing

Handbook of Natural Language Processing Robert Dale, Hermann Moisl, Harold Somers, 2000-07-25 This study explores the design and application of natural language text based processing systems based on generative linguistics empirical corpus analysis and artificial neural networks It emphasizes the practical tools to accommodate the selected system

Theoretical Issues in Natural Language Processing Yorick Wilks, 2018-10-24 Accompanying continued industrial production and sales of artificial intelligence and expert systems is the risk that difficult and resistant theoretical problems and issues will be ignored The participants at the Third Tinlap Workshop whose contributions are contained in *Theoretical Issues in Natural Language Processing* remove that risk They discuss and promote theoretical research on natural language processing examinations of solutions to current problems development of new theories and representations of published literature on the subject Discussions among these theoreticians in artificial intelligence logic psychology philosophy and linguistics draw a comprehensive up to date picture of the natural language processing field

Logic and Linguistics Helmut Schnelle, Niels Ole Bernsen, 1989 The present volume on Logic and Linguistics is one in a series of five presenting the findings of a joint European study in cognitive science 1987-88 The study was organised and funded as a collaborative network by the research unit FAST Forecast and Assessment in Science and Technology of the Commission of the European Communities and comprised about 35 scientists from the core disciplines of cognitive science The research disciplines represented in the network were cognitive psychology logic and linguistics cognitive neuroscience human computer interaction and artificial intelligence

The Oxford Handbook of Computational Linguistics Ruslan Mitkov, 2022-06-02 Ruslan Mitkov's highly successful Oxford Handbook of Computational Linguistics has been substantially revised and expanded in this second edition Alongside updated accounts of

the topics covered in the first edition it includes 17 new chapters on subjects such as semantic role labelling text to speech synthesis translation technology opinion mining and sentiment analysis and the application of Natural Language Processing in educational and biomedical contexts among many others The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics the methods and resources used such as statistical modelling machine learning and corpus annotation key language processing tasks including text segmentation anaphora resolution and speech recognition and the major applications of Natural Language Processing from machine translation to author profiling The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing as well as those working in related industries

Theoretical Syntax 1980–1990 Rosemarie Whitney

Ostler, 1992-02-13 This volume is intended to be used by practicing scholars as well as students It represents all major and some of the minor trends that have evolved during the past decade Book titles from all available sources have been included as well as periodical articles from the major journals whenever there was evidence of a theoretical approach To ensure maximum accessibility of the entries listed books and articles in language other than English and unpublished dissertations and working papers have been excluded All entries are fully annotated and the volume is completed by indices of authors and subjects

Japanese Sentence Processing Reiko Mazuka, Noriko Nagai, 2013-05-13 This volume is a direct result of the International Symposium on Japanese Sentence Processing held at Duke University The symposium provided the first opportunity for researchers in three disciplinary areas from both Japan and the United States to participate in a conference where they could discuss issues concerning Japanese syntactic processing The goals of the symposium were three fold to illuminate the mechanisms of Japanese sentence processing from the viewpoints of linguistics psycholinguistics and computer science to synthesize findings about the mechanisms of Japanese sentence processing by researchers in these three fields in Japan and the United States to lay foundations for future interdisciplinary research in Japanese sentence processing as well as international collaborations between researchers in Japan and the United States The chapters in this volume have been written from the points of view of three different disciplines with various immediate objectives from building usable speech understanding systems to investigating the nature of competence grammars for natural languages All of the papers share the long term goal of understanding the nature of human language processing mechanisms The book is concerned with two central issues the universality of language processing mechanisms and the nature of the relation between the components of linguistic knowledge and language processing This volume demonstrates that interdisciplinary research can be fruitful and provides groundwork for further research in Japanese sentence processing

Discourse

Comprehension Charles A. Weaver, III, Suzanne Mannes, C. Randy Fletcher, 2012-12-06 This volume is derived from presentations given at a conference hosted in Boulder Colorado in honor of the 60th birthday of Walter Kintsch Though the contents of the talks and thus the chapters varied widely all had one thing in common they were inspired to some degree by

the work of Walter Kintsch When making plans for an edited book centered around this conference the editors had a primary goal to acknowledge the wide variety of researchers and research areas Kintsch had influenced As a consequence one of the more unusual elements of this volume is the diversity of the contributors Researchers from six different countries contributed chapters to this book which is loosely organized around three main thrusts of Kintsch s work text based representations that explain how meaning in a text is constructed situation models which represent what the text is about rather than what a text literally says and the construction integration model Kintsch s most recent work in discourse comprehension
