Berkes (2004) presents challenges in CBC. This includes the fact that community development and conservation goals are often different. For example, what conservationists understand as community benefits, “and what multiple stakeholders in communities may have considered benefits” are often different (p.627). Community-based approaches are often inspired by failures in conservation work that excluded people from the land. There are concerns from conservationists that a focus on community participation is negatively impacting conservation goals. Therefore, Berkes (2004) argues that whether or not CBC works is not an effective question, instead it is “more important to learn about the conditions under which it does or does not work” (p.624).

CBC approaches have changed based on changing understandings of ecology; ecosystems are “complex adaptive systems in which humans are an integral part” (p.621). There have been three main theoretical shifts: 1) towards a systems approach, and away from reductionism; 2) greater understanding of the role of humans in ecosystems; and 3) a move away from a focus on “expert” recommendations. Communities in CBC should be seen as “elusive and constantly changing; not a static, isolated group of people (p.623). Communities are not “simple, isolated agents” but instead “are embedded in larger systems” (p.628). It is more effective to see CBC as “environmental governance and conservation action that starts from the ground up but deals with cross-scale relations” (p.628).

Relevance: This paper presents important discussions in the literature on CBC, and the challenges and different approaches towards its simultaneous goals of community development and conservation. Sometimes, the focus of preservation is different from resources used by local communities. Resource management institutions often focus on “use, allocation, and conflict management” and not on preservation (p.625). If a resource is not regulated by these institutions, it is more susceptible to “open-access exploitation and depletion” (p.625).

Bohensky, E. L., and Y. Maru. (2011). Indigenous knowledge, science, and resilience: what have we learned from a decade of international literature on “integration”? *Ecology and Society* 16(19).

The authors outline important factors that can lead to an effective relationship between indigenous and scientific knowledge. These include 1) identifying frameworks for integration; 2) awareness of social contexts; 3) more extensive knowledge evaluation; and 4) “involvement of inter-cultural ‘knowledge bridges’” (p.2). Challenges of knowledge integration with indigenous knowledge and science include addressing “whose knowledge is ‘new,’ whose is ‘existing,’ and who decides?” (p.2). Integration can be seen “as a technical problem” which doesn’t take into account the “power relations between indigenous people and the state”, which can lead to “products that serve scientists and the state rather than indigenous knowledge holders” (p.2). Also, Western science often approaches “IK as a singular entity when in fact both have multiple forms and dimensions” (p.7).

However, different knowledge systems can be complementary and can work together effectively. One such example is that science generally involves data from large areas over a short time frame, while Traditional Knowledge involves information from smaller areas over longer time frames.
