**Nature Out of Place** Jason Van Driesche, Roy Van Driesche, 2013-04-10 Though the forests are still green and the lakes full of water an unending stream of invasions is changing many ecosystems around the world from productive tightly integrated webs of native species to loose assemblages of stressed native species and aggressive invaders The earth is becoming what author David Quammen has called a planet of weeds Nature Out of Place brings this devastating but overlooked crisis to the forefront of public consciousness by offering a fascinating exploration of its causes and consequences along with a thoughtful and practical consideration of what can be done about it The father and son team of Jason and Roy Van Driesche offer a unique combination of narratives that highlight specific locations and problems along with comprehensive explanations of the underlying scientific and policy issues Chapters examine Hawaii where introduced feral pigs are destroying the islands native forests zebra mussel invasion in the rivers of Ohio the decades long effort to eradicate an invasive weed on the Great Plains and a story about the restoration of both ecological and human history in an urban natural area In depth background chapters explain topics ranging from how ecosystems become diverse to the characteristics of effective invaders to procedures and policies that can help prevent future invasions The book ends with a number of specific suggestions for ways that individuals can help reduce the impacts of invasive species and offers resources for further information By bringing the problem of invasive species to life for readers at all levels Nature Out of Place will play an essential role in the vital effort to raise public awareness of this ongoing ecological crisis Limnoperna Fortunei

Demetrio Boltovskoy, 2015-04-20 This book summarizes all currently available information on the ecology environmental impacts and control methods of the golden mussel in industrial plants The golden mussel was introduced in Hong Kong Taiwan Japan and South America between 1965 and 1990 swiftly spreading in freshwater waterbodies In most areas invaded it has become the dominant macroinvertebrate and a major fouling pest of industrial plants *Limnoperna fortunei* attaches to any hard surface as well as to some less firm substrates The growth of *Limnoperna* populations in raw cooling water conduits became a common nuisance in many industrial and power plants that use raw river or lake water for their processes both in South America and in Asia This work is written by experts on the golden mussel from Asia Europe North America and South America each chapter critically reviews previously available information which is in sources of limited distribution such as internal reports and theses in various languages **Transforming the Global Biosphere** Elliott Maynard, 2000-09

Transforming the Global Biosphere is based on the author's presentations to the World Future Society and was written at the suggestion of Nobel Peace Prize Nominee and former UN Assistant Secretary General Dr Robert Muller The author feels strongly that in order to reverse the presently destructive impacts of Human Technology on the Global Biosphere a Transformative Revolution in Human Consciousness must first take place Such a Magnificent Revolution would take the form of Twelve Futuristic MetaStrategies each of which would represent a Key SocioEcological Paradigm in itself Each chapter of

the book is developed around a MetaStrategy providing examples of the Major Problems as well as Innovative Solutions for reversing these Destructive Trends through selected applications of Unique Alternative Technologies and Strategies Dr Maynard's Twelve MetaStrategies for Planetary Management are essentially a set of enlightened yet effective tools for Creative Thinking and Action They are designed to promote environmentally sustainable future scenarios for the maximum benefit for Humans their Planetary Homeworld and for the Generations Yet to Come In spite of the mounting evidence of environmental damage and disturbance to our Natural Planetary Systems Dr Maynard contends that solutions to these problems are available through insightful applications of Alternative Technologies which can provide Clean Renewable Energy Efficient Non Polluting Transportation Hi Energy Nutrition and Ecologically Appropriate Lifestyles for everyone on Earth To achieve such a meaningful and lasting transformation the author feels we must move rapidly and efficiently beyond the entanglements of 20th Century Thinking and blaze adventurous new pathways into the Future Together we must find the courage to explore the promising applications of alternative leading edge Technologies which often exist outside the boundaries of the Mainstream Scientific Thought Elliott Maynard Blog *Global Ecopolitics* Peter Stoett, 2012-05-02 Despite sporadic news coverage of extreme weather international conventions on climate change or special UN days rarely do we participate in a sustained analysis of environmental policy making To remedy this shortcoming and to propel the discussion forward Peter J Stoett provides a concise introduction to environmental governance Through seven case studies Stoett analyzes the ability of international policy to provide environmental protection and discusses the ever present factors of equality sovereignty and human rights integral to these issues While providing a panoramic view of the actors and structures producing these policies Stoett reminds readers that the topic is personal that responsible governance is not solely the charge of governments but of individuals and communities as well
