Prostacyclin And Its Receptors:

Prostacyclin and Its Receptors Helen Wise, Robert L. Jones, 2007-05-08 In addition to its well known anti platelet and hypotensive properties prostacyclin activates neuronal receptors in the central enteric and sensory nervous systems This volume discusses the properties of prostacyclin receptors in the cardiovascular and nervous systems as well as in cells involved in inflammatory reactions The chemistry and pharmacology of prostacyclin mimetics are also explored highlighting their therapeutic value *G Protein-Coupled Receptors in Health and Disease, Part B*, 2009-09-19 G protein coupled receptors GPCRs transduce signals from a diverse array of endogenous ligands including ions amino acids nucleotides lipids peptides and large glycoprotein hormones They are also responsible for our sensing of exogenous stimuli including photons and odorants GPCRs regulate almost every aspect of our physiological functions It is estimated that 40% to 50% of currently used therapeutic drugs target GPCRs directly or indirectly Because the current drugs target only a small portion of the GPCRs opportunities for targeting the remaining GPCRs is enormous This volume reviews the latest developments in this rapidly advancing field This series provides a forum for discussion of new discoveries approaches and ideas Contributions from leading scholars and industry experts Reference guide for researchers involved in molecular biology and related fields

Michelson, 2011-08-29 Platelets Second Edition is the definitive current source of state of the art knowledge about platelets and covers the entire field of platelet biology pathophysiology and clinical medicine Recently there has been a rapid expansion of knowledge in both basic biology and the clinical approach to platelet related diseases including thrombosis and hemorrhage Novel platelet function tests drugs blood bank storage methods and gene therapies have been incorporated into patient care or are in development This book draws all this information into a single comprehensive and authoritative resource First edition won Best Book in Medical Science Award from the Association of American Publishers Contains fourteen new chapters on topics such as platelet genomics and proteomics inhibition of platelet function by the endothelium clinical tests of platelet function real time in vivo imaging of platelets and inherited thrombocytopenias A comprehensive full color reference comprising over 70 chapters 1400 pages and 16 000 references *Advances in Prostaglandin and Leukotriene Research* Bengt Samuelsson, Rodolfo Paoletti, Giancarlo Folco, E. Granström, S. Nicosia, 2013-03-09 This volume is the proceedings of the 11th International Conference on Advances in Prostaglandin and Leukotriene Research Basic Science and New Clinical Applications held in Florence Italy on June 4 8 2000 which continues the tradition of covering both basic and clinical aspects of prostaglandin and leukotriene research At this meeting particular emphasis was given to the potential application of the novel COX 2 inhibitors the genetics of asthma relating to the production of leukotrienes and novel cellular networks for the production of leukotrienes and lipoxins Traditionally as has been done in past meetings of this series a considerable amount of new material was presented and discussed this year with particular attention given to the newest clinical data *10 Years of Inflammation Pharmacology* Paola Patrignani, Dieter

Steinhilber, 2020-07-07 The past and future of inflammatory pharmacology research a hot topic in health and disease

Inflammation is a physiological response to a traumatic injury bacterial or viral infection However if not appropriately controlled it contributes to a long list of diseases including asthma atherosclerosis multiple sclerosis arthritis and cancer Different are the types of inflammatory responses Acute inflammation is an immediate body response to the cellular damage induced by pathogens noxious stimuli or physical injury it is a short term response resulting in healing via time dependent changes of leukocyte functions First a leukocytes infiltration happens within the damaged region with the purpose of eliminating the stimulus and repairing the tissue Chronic inflammation by contrast is a prolonged and dysregulated response where the active inflammation contributes both to tissue destruction and to the development of many chronic human conditions and diseases In the context of exaggerated inflammation which occurs as a consequence of severe burns or trauma the body response called sepsis can be associated with fatal outcome Increased knowledge of the cellular and molecular mechanisms taking part in the different types of inflammation is a central requirement to develop more effective and safer treatments This is a necessary step to prevent potential severe consequences i e organ failure associated with tissue fibrosis The mission of Inflammation Pharmacology section of Frontiers in Pharmacology is to publish scientifically sound studies that advance our knowledge on different aspects of inflammation and contribute to the development of more effective and safer anti inflammatory agents Within the present eBook are collected the top articles published in the Inflammation Pharmacology section in the last 10 years Some articles explored the roles played by different lipid mediators generated from arachidonic acid including leukotrienes and prostanoids such as prostacylin and prostaglandin PG F_{2a} in inflammatory conditions Moreover the protectin PD family of specialized pro resolving mediators biosynthesized from the two omega 3 polyunsaturated fatty acids docosahexaenoic acid DHA and n 3 docosapentaenoic acid n 3 DPA were described for their biological effects the G coupled protein receptors pharmacology biosynthesis and medicinal chemistry Some other articles focused on the development of novel strategies to counteract inflammation or to induce its resolution The current concepts and controversies on classification pathogenesis and clinical management of cutaneous adverse events induced by biologic agents used in the treatment of rheumatologic conditions were discussed in another article The whole exome and whole genome sequencing data identifying new and old loci associated with atherosclerosis will lead to discovering new molecular targets for blocking atherosclerosis even in its early stages This critical issue was reviewed in another paper Numerous information on an individual clinical condition is held in their platelet derived microparticles MPs the assessment of their number and size together with their content can represent the signature to acquire diagnostic information and to monitor the efficacy of therapeutic agents Some other articles discussed the role of fibroblasts in the development of fibrosis and potential therapies under investigation It was enlightened the role of the activation and transdifferentiation of hepatic stellate cells HSCs into contractile matrix producing myofibroblasts MFBs as central events in hepatic fibrogenesis and

summarized the current strategies for targeted delivery of drugs to pro fibrogenic liver cells including the development of therapeutics specifically targeting HSCs Continued in eBook

The Importance of Female Inclusion in Clinical Trials Rinki Minakshi, 2024-05-21 The torments of the COVID 19 pandemic overwhelmed our medical system and steered the way to the unprecedented introduction of the COVID 19 vaccine which saved many lives But the vaccine also gave rise to health issues in the female population The clinical trials deliberately marginalized females giving a biased result This book is needed at this point of time because we can t ignore female health anymore We are in need of more extensive studies on gender based diversification of the microbiome and its mechanisms The book argues that the dosage and timing of vaccination during the menstrual cycle must be an important factor The emphasis should be on overcoming the notion of bikini medicine and on providing treatment to females as individuals who have standards that can t be equated with the male

system The book will be of interest to researchers keen on exploring issues related to female physiology post drug treatment vaccination

Signaling in the Heart José Marín-García, 2011-06-21 Signal transduction pathways are at the core of most biological processes and are critical regulators of heart physiology and pathophysiology The heart is both a transmitter and dynamic receptor of a variety of intracellular and extracellular stimuli playing a critical role of an integrator of diverse signaling mechanisms Alterations in signaling pathways are contributing factors in the development and progression of a broad spectrum of diseases ranging from dysrhythmias and atherosclerosis to hypertension and the metabolic syndrome Targeting specific components of these signaling pathways has been shown to be effective in preclinical studies with significant therapeutic impact This book brings together current knowledge in cardiovascular cell signal transduction mechanisms advances in novel therapeutic approaches to improve cardiac function and discussion of future directions Presented from a post genomic perspective this exciting book introduces important new ideas in cardiovascular systems biology It is an invaluable reference for cardiology researchers and practitioners Cumulated Index Medicus ,1982
