CASE REPORT

A 76 year-old male presented with worsening symptoms of bladder outflow obstruction, with a progressive history of hesitancy, worsening stream and terminal dribbling. Routine pre-operative investigations did not reveal any significant abnormality except for a plain abdominal X-Ray, that showed considerable prostatic calcification (Figure). At cystoscopy, he was found to have an occlusive looking prostate and the prostatic urethra had a calculus embedded in it.

Prostatic Outflow Obstruction:

Prostatic Obstruction Christopher R. Chapple, 2012-12-06 The human prostate gland is of undoubted importance in reproductive physiology and is one of the commonest causes of clinical urological problems in the male patient Despite the wealth of published literature relating to the prostate gland surprisingly little is understood about its neural innervation the influence of pharmacological factors and its precise physiological functions Indeed benign disorders of the prostate gland including benign prostatic hyperplasia bladder neck dyssynergia and inflammatory disorders of the prostate prostatitis prostatodynia although well recognised clinically are as yet poorly characterised and understood It was not until the late 1960s that the subject of urodynamics which for the first time allowed scientific assessment of the function of the lower urinary tract was introduced The first section of this book considers recent advances in our understanding of the innervation of the bladder and prostate gland and the changes in bladder function which accompany prostate mediated bladder outflow obstruction The clinical consequence of benign prostatic hyperplasia in many patients is bladder outflow obstruction and although the traditional treatment of these conditions is by the use of ablative surgery in recent years a number of new modalities have been investigated and are reviewed in the second section of the book **Prostatic Obstruction**

Dmochowski,2014-07-15 *Bladder Dysfunction in the Adult The Basis for Clinical Management* succinctly describes all that the healthcare professional needs to know when treating lower urinary tract symptoms The book describes how to assess and treat every group of patients likely to be affected with bladder problems and the underlying mechanisms responsible Women with stress incontinence men with enlarged prostates people with neurological disease and the elderly are all discussed in particular detail For all professionals treating or learning to treat patients with urinary storage or voiding problems the concise presentation and thorough coverage provides treatment recommendations and clear explanations Authored by recognized experts in their respective fields *Bladder Dysfunction in the Adult The Basis for Clinical Management* is a comprehensive resource that allows the reader to develop the knowledge understanding and confidence to deal with the many clinical challenges of bladder dysfunction *Benign Prostatic Hyperplasia* Gerhard Jakse,Christian Bouffieux,Jean de Leval,Rudi A. Janknegt,2012-12-06 An intense discussion has recently begun regarding current standards in the diagnosis and treatment of benign prostatic hyperplasia BPH A number of factors have led to this discussion In an increasing proportion of aging men for example BPH causes so called obstructive symptoms that must be relieved by medical or operative means This entails an immense social and economic impact in terms of health costs In addition recent data indicate the most frequently performed operation for BPH transurethral resection of the prostate is associated with a higher risk of death due to cardiac disease than open prostatectomy Furthermore studies using the recently developed technique of urodynamics to assess bladder outflow obstruction reveal that about 20% 30% of patients treated with transurethral resection or open prostatectomy are actually not obstructed This means that these patients do not receive the most effective therapy Finally various new treatment modalities have been developed directed at endocrine pathways in the prostatic cells balloon dilatation temporary or permanent stents and the application of heat in hyperthermia or thermotherapy The contributions to this volume were selected from a symposium on the diagnosis and treatment of BPH They are intended to provide a comprehensive review of the state of the art in treating BPH Aachen Liege Maastricht September 1992 The Editors Contents Development of Benign Prostatic Hyperplasia 1 J E Altwein and H Baur *Bladder Outflow Obstruction Definition Clinical Application and Grading in Benign Prostatic Hyperplasia* Non-Motor Symptoms of Parkinson's Disease K. Ray Chaudhuri,Eduardo Tolosa,Anthony Henry Vernon Schapira,W. Poewe,2014 Patients with Parkinson's disease PD are known to suffer from motor symptoms of the disease but they also experience non motor symptoms NMS that are often present before diagnosis or that inevitably emerge with disease progression The motor symptoms of Parkinson's disease have been extensively researched and effective clinical tools for their assessment and

treatment have been developed and are readily available In contrast researchers have only recently begun to focus on the NMS of Parkinson s Disease which are poorly recognized and inadequately treated by clinicians The NMS of PD have a significant impact on patient quality of life and mortality and include neuropsychiatric sleep related autonomic gastrointestinal and sensory symptoms While some NMS can be improved with currently available treatments others may be more refractory and will require research into novel non dopaminergic drug therapies for the future Edited by members of the UK Parkinson s Disease Non Motor Group PD NMG and with contributions from international experts this new edition summarizes the current understanding of NMS symptoms in Parkinson s disease and points the way towards future research
