Proteases In Tissue Remodeling Of Lung And Heart:

Proteases in Tissue Remodelling of Lung and Heart Uwe Lendeckel, Nigel M. Hooper, 2003-09-30 Proteases in Tissue Remodelling of Lung and Heart is unique for its comprehensive presentation of protease function in lung and heart under both physiological conditions and major diseases manifesting in these two organs The individual chapters have been written by leaders in the field who paid much attention to outline in great detail the role of proteases in the pathogenesis diagnosis and treatment of disease Available animal models of disease transgenic or knock out are extensively referred to and experimental data obtained thereby are discussed in the context of patient derived data Newcomers to the field and interested non specialists will take advantage of the extensive introduction to individual proteases protease families and the diseases Understanding is greatly facilitated by the clear and condensed presentation of summarised data in tables and graphs Thus the book should be a valuable source for both clinicians and researchers interested in protease function and or diseases of lung and heart Proteases in Tissue Remodelling of Lung and Heart is devoted to proteases in lung and heart specifically and extensively covers major diseases of the lung and heart extensively introduces individual proteases or families thereof presents up to date patient derived and experimental data covers most aspects of protease function in disease

Cardiac Mechano-Electric Coupling and Arrhythmias Peter Kohl, Frederick Sachs, Michael R. Franz, 2011-08-25 Cardiac Mechano Electric Coupling and Arrhythmias offers a thoroughly reviewed compendium written by leading experts in the field on the mechanism and consequences of cardiac mechano electrical coupling Its coverage ranges from stretch activated ion channels to mechanically induced arrhythmias and mechanical interventions for heart rhythm correction Information is grouped into logical sections from molecular mechanisms to cell tissue and whole organ responses right through to patient based observations and insight emerging from clinical trials The information provided carefully highlights both consensus insight and current shortcomings in our understanding of cardiac mechano electric coupling The book has been thoroughly revised and expanded since publication of the first edition in 2005 extensively updated to reflect recent developments in the field and now offers a more balanced view of mechano electrical interactions in the heart and develops a more clinical focus Written with the practising cardiologist and junior doctor in mind it offers interesting new insight for the established physician with an interest in cardiac arrhythmogenesis and heart rhythm management

Cardiac Arrhythmias Ambrose S. Kibos, Bradley P. Knight, Vidal Essebag, Steven B. Fishberger, Mark Slevin, Ion C. Tintoiu, 2013-12-13 This book covers all the major aspects associated with pathophysiological development of cardiac arrhythmias covering enhanced or suppressed automaticity triggered activity or re entry from basic concepts through disease association limitations of current pharmacotherapy and implant therapies and on going trials and analysis of new biomarkers based on current knowledge of cellular interaction and signalling The book describes novel and state of the art methods for differentiating between the major types of arrhythmia structural abnormalities and current practice guidelines and

determination of risk stratification associated with sudden cardiac death A particular focus is on arrhythmias associated with atrial fibrillation and includes details of associations with cardiac disease current detection analysis and imaging and future perspectives

Proteases in Human Diseases Sajal Chakraborti, Tapati Chakraborti, Naranjan S. Dhalla, 2017-07-13 This book bridges the gap between fundamental research and biomedical and pharmacological applications on proteases It represents a comprehensive overview of the multifaceted field of proteases in cellular environment and highlights the recently elucidated functions of complex proteolytic systems in different diseases Several established investigators have elucidated the crucial role of proteases in biological processes including how proteolytic function and regulation can be combined to develop new strategies of therapeutic interventions Proteases form one of the largest and most diverse families of enzymes known It is now clear that proteases are involved in every aspect of life functions of an organism Under physiological conditions proteases are regulated by their endogenous inhibitors however when the activity of proteases is not regulated appropriately disease processes can result in So there is absolute need for a stringent control of proteolytic activities in cells and tissues Dysregulation of proteases may cause derangement of cellular signalling network resulting in different pathophysiological conditions such as vascular remodelling atherosclerotic plaque progression ulcer and rheumatoid arthritis Alzheimer disease cancer metastasis tumor progression and inflammation Additionally many infective microorganisms require proteases for replication or use proteases as virulence factors which have facilitated the development of protease targeted therapies for a variety of parasitic diseases

Signal Transduction and Bacterial Virulence Rino Rappuoli, Vincenzo Scarlato, Beatrice Arico, 2013-11-21 In order to survive bacteria must constantly monitor their structure and physiology Adaptive behaviours are established by using environmental sensors and response regulators These communication modules regulate a wide variety of signals including host detection and invasion cell cycle metabolite utilization starvation and many others The purpose of this volume is to give an overview of the various systems and to introduce recent advances in understanding selected systems of pathogenic bacteria

Molecular Mechanisms in Pulmonary Hypertension and Right Ventricle Dysfunction Harry Karmouty-Quintana, Christophe Guignabert, Grazyna Kwapiszewska, Mark L. Ormiston, 2019-03-20 Pulmonary hypertension PH is a disorder of the pulmonary vasculature defined

by increased mean pulmonary arterial pressure mPAP leading to right ventricle RV hypertrophy and dysfunction right sided heart failure and ultimately death PH is a common complication of chronic lung diseases CLD including idiopathic pulmonary fibrosis IPF or chronic obstructive pulmonary disease COPD where it is classified as Group 3 PH by the WHO It can also be associated with cardiovascular conditions such as left heart disease classified as Group 2 PH or appear on its own as pulmonary arterial hypertension PAH and classified as Group 1 PH In all of these cases the diagnosis of pulmonary hypertension is strongly associated with increased morbidity and mortality The focus of this Research Topic is to enhance our understanding of the mechanisms that contribute to the pathophysiology of pulmonary hypertension and right ventricle hypertrophy

Agrawal,2024-08-01 Environmental conditions and processes are one of the major pillars on which the human well being rests It is the core responsibility of the society to preserve and enhance better conditions for the human well being Indeed there are several evolving unmet needs in public health Emerging and re emerging infectious diseases and a surge in the incidence of non communicable diseases including cardiovascular

diseases CAD chronic respiratory diseases and metabolic diseases have been impediments to sustainable well being Many factors are critical in the global surge in the rate and incidence of cardiovascular diseases These include the shift from acute to chronic conditions the shift from single risk factor vs multiple influences aging population global health disparities exposure to lower harmful influences over a longer period etc However the epigenetic factors due to unhealthy environment play a most significant role in the underlying pathogenesis of cardiovascular diseases Unfortunately this has been ignored for a long time and realized lately to expand and disseminate knowledge to general population expand research activities to investigate the cellular and molecular mechanisms and develop better preventive and treatment strategies The most significant environmental impoverishment in the pathogenesis of cardiovascular diseases include different genetical chemical physical and biological influences but not limited to socio economic status and lack of nutrients nutritional aspects including habits diets and additives inhaled and ingested pollutants exhaust gas and gasoline products tobacco smoke water pollution alcohol consumption soil and mineral pollution solvents pesticides microplastics non critical usage of drugs climate change extreme atmospheric conditions extremes in noise and temperature electromagnetic influences microwaves and radiation outdoor light pollution mental stressors lack of or over exercise microbiota and microbiological agents like SARS CoV 2 virus etc
