Harari, Nadine P. Connor, Cai Grau, 2009-06-12 The emphasis on cancer management in the past was based primarily on control rates from multidisciplinary input in management There has always been a recognition that one would like to achieve the best result with the least complication but never has there been any major emphasis on evidence based outcome studies nor on functional preservation and quality of life The authors of this book have dealt very effectively with the various tumor types in head and neck cancer with the experts in the field of management The contents range from epidemiology and treatment outcome treatment techniques with the potential impact on the quality of life such as dysphagia to the various options relative to high technology radiation therapy programs for management The potential for improving form and function through surgical care as an integrated part of the program is dealt with very effectively as well as the potentials for chemotherapy and the use of targeted agents have on quality of life issues The volume also addresses toxicity quality of life and techniques for prevention of adverse effects as well as the potentials for rehabilitation and supportive care The authors have clearly done an extraordinarily good job in addressing the multiplicity of problems that impact upon the functional preservation and quality of life in head and neck radiation therapy Philadelphia Luther W *Low-level Radiation* United States. Lukacs,2012-12-06 TO THE ENGLISH EDITION Ionizing radiation has played an important role in the treatment of skin diseases for many decades With strict adherence to modern standards of radiation protection radiotherapy is a safe and effective method that benefits many patients who cannot be treated adequately by other means Although indications for dermatologic radiotherapy have decreased significantly due to advances in other therapeutic modalities many dermatologists feel strongly that ionizing radiation is an integral part of dermatologic therapy that should not be relinquished to other specialties because of the highly specialized anatomic pathologic and technologic knowledge required A recent survey of the National Program for Dermatology showed that 44% of 2 444 responding dermatologists use radiotherapy regularly for various skin conditions particularly in the treatment of cutaneous carcinomas Significantly the American Board of Dermatology has decided to continue its requirement of special knowledge in dermatologic radiation therapy for board certification Because I have taught this dermatologic subspecialty at various levels both in Europe and in the United States I readily agreed to accept Professor Braun Falco s invitation to cooperate with him and Dr Lukacs in the preparation of the English edition of this new guide The text deals mostly with modern concepts of dermatologic radiotherapy and empha sizes practical aspects of treatment Although it is written as an introduc tion for young dermatologists it may also be useful to experienced clinicians who want to keep up with recent developments in this field **Nuclear Medicine** United States.
