ICRP Publication 64 ICRP,2014-03-02 The ICRP in its 1990 Recommendations divided situations affecting radiation exposure of individuals into two broad categories practices and intervention The basic principles of radiation protection are applied to these categories in different ways In the case of practices the principles are applied to the addition of radiation risk caused by the introduction or modification of practices whilst for intervention they are applied to the subtraction or reduction of pre existing radiation exposure Radiation exposure which might result from the introduction of a practice is also divided into two broad categories normal exposure and potential exposure Normal exposure is that exposure which can reasonably be expected to occur i e the exposure is predicted to occur with a probability of one or near one independent of the time when the exposure occurs Potential exposure is exposure that while not certain to occur can be anticipated as a result of introducing or modifying a practice and to which a probability of occurrence can be assigned The purpose of this report is to elaborate upon the principles and objectives of ICRP recommendations as they relate to potential exposure explain basic concepts terminology and methodologies associated with application of the recommendations and to provide general guidance on its practical application The report is intended to provide a basis for the preparation of more detailed guidance related to specific practices

print books *Airborne Radioactive Contamination in Inhabited Areas* ,2009-08-14 For many decades investigations of the
behaviour and implications of radioactive contamination in the environment have focused on agricultural areas and food
production This was due to the erroneous assumption that the consequences of credible contaminating incidents would be
restricted to rural areas However due to the Chernobyl accident more than 250 000 persons were removed from their homes
demonstrating a great need for knowledge and instruments that could be applied to minimise the manifold adverse
consequences of contamination in inhabited areas Also today the world is facing a number of new threats including
radiological terrorism which would be likely to take place in a city where most people would become directly affected A
recent report from the US Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism
concludes that it is most likely that a large radiological or even nuclear terror attack on a major city somewhere in the world
will occur before 2013 For the first time ever the specific problems of airborne radioactive contamination in inhabited areas
are treated in a holistically covering treatise pinpointing factorial interdependencies and describing instruments for
mitigation The state of the art knowledge is here explained in *Airborne Radioactive Contamination in Inhabited Areas* y
leading scientists in the various disciplines of relevance Unique holistic description of airborne radioactive contamination of
inhabited areas and its consequences State of the art information on problems associated with both accidental and malicious
contamination events in particularly dirty bombs Detailed description of processes and parameters governing the severity of
contaminating incidents Written by key experts in the world Principles and Standards for the Disposal of Long-lived
Radioactive Wastes N. Chapman,C. McCombie,2003-10-07 This handbook is concerned with developing principles and
standards for the safe disposal of solid radioactive wastes by burial deep in the Earth s crust Radioactive wastes have
focussed thinking on long term environmental protection issues in an unprecedented way Consequently the way in which
principles and standards are set and the thinking behind this is of wider interest than to the nuclear field alone The issues
are not just technical and scientific There is also a much wider philosophical context to the debate centering on ethics human
values and the expectations of society In this handbook it is intended that all theses issues are brought together suggesting
appropriate ways forward in each area culminating in a proposed structure for safety regulations It also aims to provide a
detailed discussion of some of the most difficult logical an ethical issues facing those wishing to dispose of long lived

radioactive wastes Basic Health Physics Joseph John Bevelacqua, 2010-04-26 Designed to prepare candidates for the American Board of Health Physics Comprehensive examination Part I and other certification examinations this monograph introduces professionals in the field to radiation protection principles and their practical application in routine and emergency situations It features more than 650 worked examples illustrating concepts under discussion along with in depth coverage of sources of radiation standards and regulations biological effects of ionizing radiation instrumentation external and internal dosimetry counting statistics monitoring and interpretations operational health physics transportation and waste nuclear emergencies and more Reflecting for the first time the true scope of health physics at an introductory level Basic Health Physics Problems and Solutions gives readers the tools to properly evaluate challenging situations in all areas of radiation protection including the medical university power reactor fuel cycle research reactor environmental non ionizing radiation and accelerator health physics Decision Making for Complex Socio-Technical Systems Thomas Flüeler, 2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution **Health Effects of Low Radiation 2003** , 2002-10 This CD rom contains 28 papers presented to the BNES international conference on the health effects of low level radiation This conference is the fourth in the highly successful series and its aim is to present the fundamental radiobiological and dosimetric information relevant to understanding the current debate on the health effects of exposure to ionizing radiations at low doses and dose rates It is also intended to provide a forum for discussion of the latest developments in this area and their relevance to the radiological protection of human health and the environment *IAEA Bulletin* , 1999 **Nuclear Decommissioning, Waste Management, and Environmental Site Remediation** Colin Bayliss, Kevin Langley, 2003-10-10 Decommissioning nuclear facilities is a relatively new field which has developed rapidly in the last ten years It involves materials that may be highly radioactive and therefore require sophisticated methods of containment and remote handling The wastes arising from decommissioning are hazardous and

have to be stored or disposed of safely in order to protect the environment and future generations Nuclear decommissioning work must be carried out to the highest possible standards to protect workers the general public and the environment This book describes the techniques used for dismantling redundant nuclear facilities the safe storage of radioactive wastes and the restoration of nuclear licensed sites Describes the techniques used for dismantling nuclear facilities safe storage of radioactive wastes and the restoration of nuclear licensed facilities Provides the reader with decommissioning experience accumulated over 15 years by UKAEA Contains valuable information to personnel new to decommissioning and waste management

spatial problems To date however many initiatives have remained disconnected and uncoordinated leading to less powerful less compatible and less widely implemented systems than might otherwise have been the case The important matters discussed here include the probabilistic nature of most environmental hazards and the semi random factors that influence interactions between these and human exposures the effects of temporal and spatial scales on hazard assessment and imputed risk the effects of measurement error in risk estimation and the stratification of risks and their impacts according to socioeconomic characteristics and the quantification of socioeconomic differences in vulnerability and susceptibility to environmental hazards *Environmental Science (Vol - 2)* Mr. Rohit Manglik, 2023-06-23 In this book pollution types their effects and environmental management practices are presented
