Protein Phosphorylation In Cell Growth Regulation

Enrique Pimentel

Protein Phosphorylation In Cell Growth Regulation:

Protein Phosphorylation in Cell Growth Regulation April Clemens, 1996-12-01 Presents a survey of protein phosphorylation roles in the control of cellular proliferation and differentiation A large number of protein kinases and phosphatases have been characterised in higher cells and have been shown to be involved in signal transduction pathways by which growth factors mitogens and extracellular agents exert proliferative effects on cells Important subjects covered include control of gene expression at the transcriptional and translational levels and roles of the elk kinases and cyclings in cell cycles regulation Describes all major families of protein kinases of significance to growth regulation The aim of this text is to integrate the processes of protein phosphorylation and dephosphorylation into the complex pathways by which cellular proliferation is driven bringing together the many different systems of control implicated in the regulation of cell growth

Protein Phosphorylation and the Regulation of Cell Growth Lana Elaine Wlodyka, 1981 Handbook of Growth Factors Enrique Pimentel, 1994-06-02 Volume I of this book provides a comprehensive discussion of the factors involved in regulation of the cell cycle the general biological properties of growth factors and the receptor and postreceptor mechanisms of action of these signaling agents It evaluates the possible role of growth factors in the regulation of proto oncogene and tumor suppressor gene expression and the development of neoplastic processes is discussed in detail **Reversible Protein**

Phosphorylation in Cell Regulation R.L. Kandelwal, J.H. Wang, 2012-12-06 This book published in association with the journal MOLECULAR AND CELLULAR BIOCHEMISTRY is dedicated to Ed Krebs and Eddy Fischer in celebration of their 1992 Nobel Prize in Physiology and Medicine Reversible protein phosphorylation is a research field pioneered and developed by Krebs and Fischer This book contains short reviews and original research papers contributed by Krebs and Fischer s coworkers both former and current The contents reflect the two way interaction between protein phosphorylation and other biomedical research fields The chapters are grouped into four sections The first two deal with structure function aspects of protein kinases and protein mechanisms Unlike many other research fields which undergo periods of intense activity and productivity followed by relative calm the protein phosphorylation field enjoyed continued growth both in scope and intensity and the pace of this growth has increased markedly in recent years This volume will provide a glimpse of the dynamism and diversity of the research activity representative of the current state of the field Handbook of Growth Factors (1994)

Enrique Pimentel, 2017-11-22 Volume I of this book provides a comprehensive discussion of the factors involved in regulation of the cell cycle the general biological properties of growth factors and the receptor and postreceptor mechanisms of action of these signaling agents It evaluates the possible role of growth factors in the regulation of proto oncogene and tumor suppressor gene expression and the development of neoplastic processes is discussed in detail **Biomedical Index to**

Herrera, Robert H. Knopp, 2020-10-28 Intrauterine development and birth constitute an uninterrupted sequence of events that have a molecular physiologic background Perinatal Biochemistry presents a comprehensive review of this subject Specific topics addressed include maternal metabolism during pregnancy maternal insulin resistance embryonic and fetal metabolism and fuel consumption the fetal pancreas growth factors brain metabolism and biochemical adaptations to early extrauterine life The book will be useful to biochemists and physiologists interested in perinatology clinicians working in areas related to maternal health gestational development and delivery gynecologists neonatologists pediatricians endocrinologists and internists

Modeling Neuromuscular Diseases to Determine Molecular Drivers of Pathology and for Drug Discovery David Lee Mack, Mark Bothwell, Megan Laura McCain, Alec S. T. Smith, 2022-11-14 Control of Cell Cycle and Cell Proliferation Rossen Donev, 2023-04-13 Control of Cell Cycle and Cell Proliferation Volume 135 in the Advances in Protein Chemistry and Structural Biology series presents chapters on a variety of topics including Exploiting pivotal mechanisms behind the senescence like cell cycle arrest Viral infection on through Cell Cycle Regulation Analyzing drug resistant mutation in CDK4 gene and identification of potential inhibitors through structure based virtual screening approach Controlling cell proliferation by targeting CDK6 using drug repurposing approach The role of the nucleolus in regulating cell cycle Chromatin regulators in DNA replication and genome stability maintenance during S phase Role of macrophage in cancer cell progression and targeted immunotherapies and much more Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the Advances in Protein Chemistry and Structural Biology series Includes the latest information on Control of Cell Cycle and Cell Proliferation

Cell Cycle Regulation Robert R. Ruffolo, Jr., George Poste, Brian W. Metcalf, 1997-12-23 Focuses on recent key discoveries made relating to the cell cycle and its regulation a critical new horizon in therapeutics Research into all aspects of cell cycle regulation has undergone explosive growth during the past decade due to the powerful techniques of molecular biology An overall view of the cellular processes both at the enzymatic and genetic level has been identified in continually finer detail as described inside this text This has enabled significant progress in the identification of drugs capable of acting on specific components of the cell cycle with the result that we may soon have the ability to manipulate the cell cycle pharmacologically The potential impact on clinical conditions such as cancer hematopoiesis angiogenesis inflammation organ remodelling and apoptosis is vast Originating from presentations at the Eighth SmithKline Beecham Pharmaceuticals United States Research Symposium each chapter in this volume is written by an opinion leader in the field

Transcriptional Control of Cell Growth Peggy J. Farnham, 2012-12-06 It is of critical importance to maintain an appropriate balance between proliferation and quiescence or differentiation through out the lifespan of all animals An important control point in this balance occurs in the G phase of the cell cycle On the basis of environmental cues a cell in G must decide whether to continue through the proliferative cycle and enter S phase where DNA replication occurs or to exit from the proliferative

cycle into a nonreplicating state Alterations in the mechanisms that normally control this decision can lead to cancer cell death or loss of differentiated cellular phenotypes The identification of the E2F gene family of transcription factors has allowed a more complete understanding of how the cell maintains an appropriate proliferative state This volume provides an up to date account of present reports concerning E2F as well as a framework for future investigations E2F activity requires heterodimerization of two partners Either partner can be one of several different transcription factors E2F1 E2F2 E2F3 E2F4 or E2F5 can heterodimerize with either Dp1 or Dp2 Cellular promoters whose E2F sites mediate a link between transcription and proliferation drive genes whose products are required for DNA synthesis and genes that encode regulators of cell growth A detailed analysis of the role that E2F family members play in transcription from these promoters is presented in the chapter by J E SLANSKY and P J FARNHAM

Cellular Signal Processing Friedrich Marks,Ursula Klingmüller,Karin Müller-Decker,2008-11-14 Cellular Signal Processing is intended for use in signal transduction courses for undergraduate and graduate students It offers a unifying view of cell signaling that is based on the concept of protein interactions acting as sophisticated data processing networks that govern intracellular and extracellular communication The content is guided by three major principles that are central to signal transduction the protein network its energy supply and its evolution It includes coverage of all important aspects of cell signaling ranging from prokaryotic signal transduction to neuronal signaling It also highlights the clinical aspects of cell signaling in health and disease

A Molecular and Cellular View of Protein Kinase CK2 Khalil Ahmed,E. Chambaz,Olaf-Georg Issinger,2012-09-18 It is now generally recognized that protein kinase signaling is involved in virtually every aspect of cell function including growth and proliferation The field of protein phosphorylation including the enzymes involved in this post translational modification continues to advance at a fascinating pace Since the first international meeting on this topic held in Heidelberg in 1994 several new avenues of CK2 research have emerged despite persistent deficiencies in our understanding of the regulation of its activity Among the significant new directions are studies related to the structure of the enzyme especially its crystal structure as well as an interesting aspect of CK2 function that involves its subunits as binding partners of several other proteins In addition new data have been gathered on the role of CK2 in transcription as well as in certain other cellular functions To address these various aspects of the progress of CK2 a number of key scientists from different parts of the world came together at the second international meeting on A Molecular and Cellular View of Protein Kinase CK2 held at Villard de Lans near Grenoble on September 24-26 1997 The meeting was attended by nearly 50 participants and included 28 presentations which provide a view of the latest progress on protein kinase CK2
