The Porphyrin Handbook Karl Kadish, Kevin M. Smith, Roger Guilard, 2012-12-02 The Porphyrin Handbook Volume 12 The Iron and Cobalt Pigments Biosynthesis Structure and Degradation provides information pertinent to every aspect of the chemistry synthesis spectroscopy and structure of phthalocyanines This book presents the biochemical and clinical aspects of genetically transmitted or drug induced diseases associated with errors in heme metabolism Organized into eight chapters this volume begins with an overview of the comparison of regulatory principles in animal and plant tetrapyrrole biosynthesis This text then examines the biology and medical implications of porphyrin systems Other chapters consider the transformation of hemes into bile pigments the organic synthesis of bilins and the pathways of degradation of chlorophyll in senescent plants This book discusses as well the biosynthesis of porphyrins vitamin B12 and chlorophylls The final chapter deals with genome sequencing projects that provide sources of genes encoding the enzymes needed for the synthesis of the intermediates This book is a valuable resource for research scientists engineers and clinicians

Recent Advances in Biological Membrane Studies Lester Packer, 2012-12-06 A NATO Advanced Study Institute on New Developments and Methods in Membrane Research and Biological Energy Transduction was held in order to consider some of the most recent developments in membrane research methodologies and results with particular emphasis on studies of biological energy transduction The participants in the Institute dealt with three general areas of membrane study membrane structure with emphasis on lipid and protein components membrane component assembly with particular emphasis on mitochondria and chloroplasts and the specialized functions of certain membrane systems This last area included discussions of topics such as drug transformation the role of membrane electron transport in the generation of oxygen radicals the effect of oxygen radicals on cellular homeostasis and on the structure organization and function of the acetylcholine receptor Lectures and posters were concerned with two central questions what is the function of membrane structure in energy transduction and how can energy transduction be effectively measured and assessed This text presents the content of the major lectures and important posters presented during the Institute's program In issuing this book the editor hopes to convey the proceedings of the Institute to a larger audience and to offer a comprehensive account of those developments in membrane research that were considered on the Island of Spetsai between August 16 and August 29 1984 L Packer Berkeley California February 1985 v CONTENTS I STRUCTURE AND BIOGENESIS Membrane Structure Neutron Diffraction and Small Angle Scattering Studies 1 G
