Education for Diversity Andrew Stables, 2017-11-01. This book was published in 2003. Certain social and cultural changes have problematized many of the assumptions that underpinned educational thinking in the 20th century. These can be grouped under three broad headings: individualization, globalization and the ecological challenge. Each of these has potentially profound implications for education that have been little explored. Rising to the challenge, this volume examines individualization in relation to changing attitudes to childhood and the positioning and identity development of students within educational markets. It discusses globalization from several crucial perspectives including the reduced sovereignty of the nation state and the problematizing of notions of distance and proximity. The ever increasing environmental crisis is considered in terms of the possibilities for education for sustainable development.

Regional Development in the Knowledge Economy Philip Cooke, Andrea Piccaluga, 2006-09-27. International contributors provide the first examination of the growing subject of regional knowledge economy development. Illustrated by data and stylized accounts, the international contributors chart the evolution of knowledge economies, questioning the way in which they work and criticize accepted theories and inform how places can cope in the knowledge economy. Making 21st Century Knowledge Complexes Julie Tian Miao, Paul Benneworth, Nicholas A.

Phelps, 2015-05-15. The world has changed profoundly since the publication of the influential book *Technopoles of the World*. As policy makers and practitioners attempt to harness science, technology and innovation to create dynamic and vibrant cities, many wonder how relevant Manuel Castells and Peter Hall's messages are today. Twenty years later, this book returns to their concepts and practices to update their message for the 21st century. *Making 21st Century Knowledge Complexes: Technopoles of the World Revisited* argues that the contemporary technopole concept encompasses three new dimensions. Firstly, building synergy between partners is vital for the success of complexes. Secondly, the correct governance arrangements are critical to balance competing interests inevitable in any science city project. Thirdly, new evaluation mechanisms are indispensable in allowing policy makers to steer their long term benefits. Through twelve case study chapters and a detailed comparative analysis, this book provides academics, policy makers and practitioners with critical insights in understanding managing and promoting today's high technology urban complexes.
