**Psyche-Genetics** S.W. Pringle,2005-12-02 Psyche Genetics as the title implies is concerned with the intimate atomic relationship between the body and soul of MAN It examines the on going cycle of mankind s social and spiritual evolution from the infancy of our Stone Age all the way to the end of our cycle as transcendental Cosmic sages in a future Age yet to come when no more children will be born It provides a unique portrait of all three Great Houses of MAN and the journey through Time and Space that we are taking It tells us who we are why we exist and where we are going It brings attention to the nuclear threat of the present moment and the great difficulty we are all having in letting go of the pseudo intellectual teenage arguments and reckless gambles of a dying Steel Age

**Psyche-Genetics** S. W. Pringle,2005-11 The mechanics of fluid friction and the transfer of heat are not understood to this day The use of pipes ducts and channels is not being hampered by the lack of this basic knowledge as conduit systems are everywhere What is being hampered that the book addresses are efficient design and the predictability of performance Since the discovery of the principles of equivalence similar flow and the similarity of flow it has become clear that flow relationships as they are currently presented have to be revisited The chapter BASICS OF FLOW is created to provide a background for the fundamental information needed to evaluate flow relationships Equivalence means that an equivalent round conduit can always be found to represent a noncircular surface configuration for the purpose of calculating friction losses and or the transfer of heat The equivalent round conduit is introduced also as a device to analyze the properties of flow A new perspective of fluid friction evolves that supports the principle of equivalence The principle of similar flow leads the way to new fundamentals of fluid flow such as the natural friction factor Equivalence and similar flow combine to provide direct solutions to networks The discovery of the mixed boundary layer leads to among other things the derivation of the inside coefficient of heat transfer Fluid friction and the transfer of heat are mathematically correlated which means that the friction loss can be determined from the heat transferred and the heat transferred can be determined from the friction loss
