### ABSTRACT

Surgical transplantation of human organs from deceased as well as living donors to sick and dying patients began after the Second World War. Over the past 50 years the transplantation of human organs, tissues and cells has become a worldwide practice which has extended, and greatly enhanced the quality of hundreds of thousands of lives. The field of transplantation medicine provides an important chance for liaison between psychiatric professionals and other transplant physicians and surgeons. The discrepancy between the ever-increasing demand for organs but the decreasing supply makes it important to evaluate and prioritize individuals who are in dire need of the organ. However, this also gives rise to certain ethical questions. The following paper discusses various psychiatric aspects of organ transplantation in general.

**KEYWORDS:** Organ transplantation; Donor; Recipient; Psychiatric aspects; Organs

### INTRODUCTION

Organ transplantation has by far been a very important milestone in the field of medicine. This is probably the only procedure that offers more hope of life for people suffering from a wide range of diseases that lead to end-stage organ failure and death than any other medico-surgical procedure. There is a huge demand for human organs for transplantation. However, one has to understand that the demand far exceeds the supply of the organs. A great deal of progress has been happening in this field from the time Thomas E. Starzl, the father of transplantation, performed the first human liver transplant in 1963 and the first successful liver transplant in 1967.

Psychiatric comorbidity in patients undergoing organ transplantation is an important is-

sue and results in significant morbidity and mortality presenting a unique opportunity for psychiatric involvement in the care of medically ill patients. Transplantation medicine has expanded over the past decade and consultation-liaison psychiatrists play an important role in helping patients and their families deal with the plethora of psychosocial issues that may be involved in the procedure. This article discusses the importance of the role of psychiatrist in the transplant team.

### ANCIENT TRANSPLANTATION

The idea of people sharing body parts among themselves or with animals is as old as mankind. Various mythologies have remarkably similar tales of magical replacement of different body parts, usually with supernatural interventions. The cause and cure of disease and illness and the outcomes of various injuries were believed to be in the hands of gods and deities, and hence it was also assumed that supernatural forces could lift illnesses, ensure
