Bursts with gloriously geeky detail The Telegraph Have you ever made someone you love a mix tape Forty years ago a group of scientists artists and writers gathered in a house in Ithaca New York to work on the most important compilation ever conceived It wasn't from one person to another it was from Earth to the Cosmos In 1977 NASA sent Voyager 1 and 2 on a Grand Tour of the outer planets During the design phase of the Voyager mission it was realised that this pair of plucky probes would eventually leave our solar system to drift forever in the unimaginable void of interstellar space With this gloomy sounding outcome in mind NASA decided to do something optimistic They commissioned astronomer Carl Sagan to create a message to be fixed to the side of Voyager 1 and 2 a plaque a calling card a handshake to any passing alien that might one day chance upon them The result was the Voyager Golden Record a genre hopping multi media metal LP A 90 minute playlist of music from across the globe a sound essay of life on Earth spoken greetings in multiple languages and more than 100 photographs and diagrams all painstakingly chosen by Sagan and his team to create an aliens guide to Earthlings The record included music by J S Bach and Chuck Berry a message of peace from US president Jimmy Carter facts figures and dimensions all encased in a golden box The Vinyl Frontier tells the story of NASA's interstellar mix tape from first phone call to final launch when Voyager 1 and 2 left our planet bearing their hopeful message from the Summer of 77 to a distant future Dreams of Other Worlds Chris Impey, Holly Henry, 2016-04-19 The story of unmanned space exploration

from Viking to today Dreams of Other Worlds describes the unmanned space missions that have opened new windows on distant worlds Spanning four decades of dramatic advances in astronomy and planetary science this book tells the story of eleven iconic exploratory missions and how they have fundamentally transformed our scientific and cultural perspectives on the universe and our place in it The journey begins with the Viking and Mars Exploration Rover missions to Mars which paint a startling picture of a planet at the cusp of habitability It then moves into the realm of the gas giants with the Voyager

probes and Cassini's ongoing exploration of the moons of Saturn. The Stardust probe's dramatic round trip encounter with a comet is brought vividly to life as are the SOHO and Hipparcos missions to study the Sun and Milky Way. This stunningly illustrated book also explores how our view of the universe has been brought into sharp focus by NASA's great observatories Spitzer, Chandra, and Hubble, and how the WMAP mission has provided rare glimpses of the dawn of creation. *Dreams of Other Worlds* reveals how these unmanned exploratory missions have redefined what it means to be the temporary tenants of a small planet in a vast cosmos.

Murmurs of Earth Niya Sun, 2016 In 1977 two spacecraft called Voyager were launched to the stars. Affixed to each Voyager is a golden record that contains spoken greetings from Earth people in 55 different languages. This record is a message to possible extraterrestrial civilizations that might encounter the spacecraft in some distant space and time. This artist's book intends to show human's ambition and tentativeness to reach out and how this small record symbolizes hope and human spirit. In this book the sound wave pattern of each greeting is created using computer software and then drawn onto the acetate paper. As reader turns the pages each greeting would be sent into the dark and unknown universe.

NASA's Voyager Missions Ben Evans, David M. Harland, 2008-02-26 For the first time in one volume Ben Evans with David Harland will not only tell the story of the hugely successful Voyager missions but also that of the men and women who have devoted their entire working lives to them. Illustrated with stunning images, some in color, they describe the missions from their conception through their spectacular encounters with the outer planets and on to their ultimate and as yet unknown destination among the stars in the so-called Voyager Interstellar Mission.

In Quest of the Solar System Theo Koupelis, 2010-01-26

The Interstellar Age Jim Bell, 2015-02-24 The story of the men and women who drove NASA's Voyager spacecraft mission, the farthest flung emissaries of planet Earth, told by a scientist who was there from the beginning. Voyager 1 left our solar system in 2012; its sister craft Voyager 2 did so in 2018. The fantastic journey began in 1977, before the first episode of *Cosmos* aired. The mission was planned as a grand tour beyond the moon, beyond Mars, Jupiter, Saturn, Uranus, and Neptune, and maybe even into interstellar space. The fact that it actually happened makes this humanity's greatest space mission.

In *The Interstellar Age*, award-winning planetary scientist Jim Bell reveals what drove and continues to drive the members of this extraordinary team, including Ed Stone, Voyager's chief scientist and the one-time head of NASA's Jet Propulsion Lab; Charley Kohlhaas, an orbital dynamics engineer who helped to design many of the critical slingshot maneuvers around planets that enabled the Voyagers to travel so far; and the geologist whose Earth-bound experience would prove of little help in interpreting the strange new landscapes revealed in the Voyagers' astoundingly clear images of moons and planets. Speeding through space at a mind-bending eleven miles a second, Voyager 1 and Voyager 2 are now beyond our solar system's planets, the first man-made objects to go interstellar. By the time Voyager passes its first star in about 40,000 years, the gold record on the spacecraft, containing various music and images including Chuck Berry's "Johnny B. Goode," will still be playable.
