Natural Knowledge In Preclassical Antiquity:

Natural Knowledge in Preclassical Antiquity Mott T. Greene, 1992 In describing the origins of modern science historians often fail to appreciate or misread how the ancients understood and used significant expressions of natural knowledge Few read the story of the cyclops for example as useful advice about where to travel and settle and where not to Others search for lost Egyptian wisdom rather than see how the great pyramids of the Old Kingdom could be built with the simple tools and cumbersome mathematics of the time Mott T Greene reexamines the remnants of ancient life using conceptual tools seldom brought to bear on such material The result is a fresh appraisal of what the evidence will yield about natural phenomena and modes of thought in the distant past Greene builds on the work of modern scholars but contributes scientific precision and tenacity to debates in areas as diverse as archaeology early art history Egyptian fractions Indo Iranian religion classical Greek verse and Plato's problem of knowledge

The Oxford Handbook of Natural Theology Russell Re Manning, 2013-01-17 The Oxford Handbook of Natural Theology is the first collection to consider the full breadth of natural theology from both historical and contemporary perspectives and to bring together leading scholars to offer accessible high level accounts of the major themes The volume embodies and develops the recent revival of interest in natural theology as a topic of serious critical engagement Frequently misunderstood or polemicized natural theology is an under studied yet persistent and pervasive presence throughout the history of thought about ultimate reality from the classical Greek theology of the philosophers to twenty first century debates in science and religion Of interest to students and scholars from a wide range of disciplines this authoritative handbook draws on the very best of contemporary scholarship to present a critical overview of the subject area Thirty eight new essays trace the transformations of natural theology in different historical and religious contexts the place of natural theology in different philosophical traditions and diverse scientific disciplines and the various cultural and aesthetic approaches to natural theology to reveal a rich seam of multi faceted theological reflection rooted in human nature and the environments within which we find ourselves

Lost Knowledge Benjamin B. Olshin, 2019-02-19 Lost Knowledge The Concept of Vanished Technologies and Other Human Histories examines the idea of lost knowledge reaching back to a period between myth and history It investigates a peculiar idea found in a number of early texts that there were civilizations with knowledge of sophisticated technologies and that this knowledge was obscured or destroyed over time along with the civilization that had created it This book presents critical studies of a series of early Chinese South Asian and other texts that look at the idea of specific lost technologies such as mechanical flight and the transmission of images There is also an examination of why concepts of a vanished golden age were prevalent in so many cultures Offering an engaging and investigative look at the propagation of history and myth in technology and culture this book is sure to interest historians and readers from many backgrounds

A History of Science in World Cultures Scott L. Montgomery, Alok Kumar, 2015-06-12 To understand modern science it is essential to recognize that many of the most fundamental scientific principles are drawn from the knowledge of ancient civilizations Taking a global yet comprehensive approach to this complex topic A History of Science in World Cultures uses a broad range of case studies and examples to demonstrate that the scientific thought and method of the present day is deeply rooted in a pluricultural past Covering ancient Egypt Mesopotamia India Greece China Islam and the New World this volume discusses the scope of scientific and technological achievements in each civilization and how the knowledge it developed came to impact the European Renaissance Themes covered include the influence these scientific cultures had upon one another the power of writing and its technologies visions of mathematical order in the universe and how it can be represented and what elements of the distant scientific past we continue to depend upon today Topics often left unexamined in histories of science are treated in fascinating detail such as the chemistry of mummification and the Great Library in Alexandria in Egypt jewellery and urban planning of the Indus Valley hydraulic engineering and the compass in China the sustainable agriculture and dental surgery of the Mayas and algebra and optics in Islam This book shows that scientific thought has never been confined to any one era culture or geographic region Clearly presented and highly illustrated A History of Science in World Cultures is the perfect text for all students and others interested in the development of science throughout history

When They Severed Earth from Sky Elizabeth Wayland Barber, Paul T. Barber, 2012-01-02 Why were Prometheus and Loki envisioned as chained to rocks What was the Golden Calf Why are mirrors believed to carry bad luck How could anyone think that mortals like Perseus Beowulf and St George actually fought dragons since dragons don't exist Strange though they sound however these myths did not begin as fiction This absorbing book shows that myths originally transmitted real information about real events and observations preserving the information sometimes for millennia within nonliterate societies Geologists interpretations of how a volcanic cataclysm long ago created Oregon's Crater Lake for example is echoed point for point in the local myth of its origin The Klamath tribe saw it happen and passed down the story for nearly 8 000 years We however have been literate so long that we've forgotten how myths

encode reality Recent studies of how our brains work applied to a wide range of data from the Pacific Northwest to ancient Egypt to modern stories reported in newspapers have helped the Barbers deduce the characteristic principles by which such tales both develop and degrade through time Myth is in fact a quite reasonable way to convey important messages orally over many generations although reasoning back to the original events is possible only under rather specific conditions Our oldest written records date to 5 200 years ago but we have been speaking and mythmaking for perhaps 100 000 This groundbreaking book points the way to restoring some of that lost history and teaching us about human storytelling A Short History of Scientific Thought John Henry,2011-11-28 An essential introductory textbook that shows students how science came to be such an important aspect of modern culture Lively and readable it provides a rich historical survey of the major developments in scientific thought from the Ancient Greeks to the twentieth century John Henry also explains how new scientific theories have emerged and analyses their impact on contemporary thinking This is an ideal core text for modules on the History of Science Medicine and Technology or the History and Philosophy of Science or a supplementary text for broader modules on European History or Intellectual History which may be offered at the upper levels of an undergraduate History Philosophy or Science degree In addition it is a crucial resource for students who may be studying the history of science for the first time as part of a taught postgraduate degree in European History Intellectual History Science or Philosophy Future War Christopher Coker,2015-11-12 Will tomorrow s wars be dominated by autonomous drones land robots and warriors wired into a cybernetic network which can read their thoughts Will war be fought with greater or lesser humanity Will it be played out in cyberspace and further afield in Low Earth Orbit Or will it be fought more intensely still in the sprawling cities of the developing world the grim black holes of social exclusion on our increasingly unequal planet Will the Great Powers reinvent conflict between themselves or is war destined to become much smaller both in terms of its actors and the beliefs for which they will be willing to kill In this illuminating new book Christopher Coker takes us on an incredible journey into the future of warfare Focusing on contemporary trends that are changing the nature and dynamics of armed conflict he shows how conflict will continue to evolve in ways that are unlikely to render our century any less bloody than the last With insights from philosophy cutting edge scientific research and popular culture Future War is a compelling and thought provoking meditation on the shape of war to come Animal Ethics in the Age of Humans Bernice Bovenkerk,Jozef Keulartz,2016-09-21 This book provides reflection on the increasingly blurry boundaries that characterize the human animal relationship In the Anthropocene humans and animals have come closer together and this asks for rethinking old divisions Firstly new scientific insights and technological advances lead to a blurring of the boundaries between animals and humans Secondly our increasing influence on nature leads to a rethinking of the old distinction between individual animal ethics and collectivist environmental ethics Thirdly ongoing urbanization and destruction of animal habitats leads to a blurring between the categories of wild and domesticated animals Finally globalization and global climate change have led to the

fragmentation of natural habitats blurring the old distinction between in situ and ex situ conservation In this book researchers at the cutting edge of their fields systematically examine the broad field of human animal relations dealing with wild liminal and domestic animals with conservation and zoos and with technologies such as biomimicry This book is timely in that it explores the new directions in which our thinking about the human animal relationship are developing While the target audience primarily consists of animal studies scholars coming from a wide range of disciplines including philosophy sociology psychology ethology literature and film studies many of the topics that are discussed have relevance beyond a purely theoretical one as such the book also aims to inspire for example biologists conservationists and zoo keepers to reflect on their relationship with animals
