Natural History And Behavior Of North American Beewolves:

The Natural History and Behavior of North American Beewolves Howard E. Evans, Kevin M. O'Neill, 2019-05-15

Beewolves are a major group of solitary ground nesting wasps belonging to the genus *Philanthus* of the family Sphecidae. The common name beewolf derives from the females' practice of preying upon bees to obtain food for their young. This book brings together information on the biology of more than two thirds of the 34 North American species including much previously unpublished data; it is the first book on these wasps to provide extensive material on the behavior of both males and females.

Species of the zebratus group Howard Ensign Evans, 1988

The Sand Wasps Howard Ensign EVANS, Kevin M. O'Neill, Howard Ensign Evans, 2009-06-30

Howard Evans was a brilliant ethologist and systematist describing over 900 species in over a dozen entomology and natural history books. Upon his death in 2002 he left behind an unfinished manuscript intended as an update of his classic 1966 work *The Comparative Ethology and Evolution of the Sand Wasps*. O'Neill, Evans's former student and coauthor, has completed and enlarged this work into a tribe-by-tribe species-by-species review of Bembicinae studies from the last four decades.

Naturalist's Years in the Rocky Mountains Howard E. Evans, 2001-03

Twenty elegant essays examine animal behavior from hummingbirds to bumblebees, thicket ants to wrens, owls to woodrats to wasps.

Behavioral Ecology of Insect Parasitoids Eric Wajnberg, Carlos Bernstein, Jacques van Alphen, 2008-04-30

Written by a team of leading international specialists, *Behavioral Ecology of Insect Parasitoids* examines the optimal behaviors that parasitoids exhibit in order to maximize long-term offspring production. It is an essential reference for research scientists and students studying these fascinating insects or for anyone involved in using parasitoids in biological control programs. Reviews topical issues including cutting-edge research on parasitoid decision making and the implications for biological control. Explores applications in other fields, provides information on the latest research methods and includes helpful case studies and statistical tools. Creates a deeper understanding of the link between behavioural strategies and host mortality, resulting in more efficient selective pest management programs. Overall, this is a fascinating volume that provides a significant contribution to the literature on parasitoid insects. It goes a long way toward providing insights into numerous aspects of parasitoid behavior and will stimulate a diversity of future projects, something that should be the goal of any such text. I highly recommend Wajnberg et al. for all of those working on the biology or evolution of parasitoids. Palaios 2009

Man Who Loved Wasps Howard E. Evans, 2005-03-15

As the world's leading authority on wasps, Howard Ensign Evans's lifelong study of this creature was only one aspect of his life as an acclaimed scientist and author. For readers, he illuminated the otherworldly lives of humble creatures in such popular books as *Life on a Little Known Planet*, *Wasp Farm*, and *Pioneer Naturalists*. Evans was a master entomologist who seems only to have been truly comfortable in places where the bugs called. There he found his beauty, his magic, and his poetry. In this collection, which he completed just before his death at 83, it appears Evans knew all 900,000 species of his gems that to others were only insects along with the

lowly magpie and the birds of Australia as well Edward O Wilson one of the world's preeminent biologists is the author of more than twenty five books including Sociobiology the Pulitzer Prize winning The Ants and the best selling novel Anthill A professor emeritus at Harvard University he lives in Lexington Massachusetts

Insect Defenses David L. Evans, Justin O. Schmidt, 1990-07-19 This work takes a fresh modern approach to investigate and explain the predator and prey relationships of insects and spiders the major terrestrial fauna on earth Devoted to broad and in depth analysis of arthropod defenses against predators the book's approach is both experimentally and theoretically based with major emphasis on evolution predator strategies and tactics and prey defensive adaptations and behaviors The authors explain such topics as cryptic and aposematic coloration the conflict between sexual and survival needs web spider prey choice and evolution of prey counter defenses predator prey interactions and the origins of intelligence bird predatory tactics and caterpillar defense strategies Also examined is the use of timing for fitness and survival evolutionary gamesmanship in the predatory bat moth relationship colony defense by paper wasps startle as a defense by moths aggregation as a defense chemicals as defenses plant chemicals as defenses and venoms as defenses The authors illustrate each topic with numerous specific well documented examples presented in a clear readable style

The Differences Between the Sexes R. V. Short, E. Balaban, 1994-08-04 In most animals from bees to bison house flies to humans it is possible to see at a glance whether an individual is male or female How and why have these differences in appearance and behaviour developed and what are the nature and extent of the differences between men and women This book reviews the latest molecular genetic hormonal anatomical and behavioural data in a wide range of species in a series of lively and highly readable articles from the world's leading experts in this field Such an overview has never before been attempted It will have a wide appeal especially to undergraduates and graduates in the biological and medical sciences and will help to bridge the gap between those who study genes and molecules in the laboratory and those who study the behaviour of animals in the wild

The Solitary Bees Bryan N. Danforth, Robert L. Minckley, John L. Neff, 2019-08-27 The most up to date and authoritative resource on the biology and evolution of solitary bees which draws on new research to provide a comprehensive and authoritative overview of solitary bee biology offering an unparalleled look at these remarkable insects

Signalers and Receivers Michael D. Greenfield, 2002-02-28 In most terrestrial and aquatic habitats the vast majority of animals transmitting and receiving communicative signals are arthropods This book presents the story of how this important group of animals use pheromones sound vibration and light for sexual and social communication Because of their small to minute body size most arthropods have problems sending and receiving acoustic and optical information each of which have their own severe constraints Because of these restraints they have developed chemical signaling which is not similarly limited by scale Presenting the latest theoretical and experimental findings from studies of signaling it suggests that close parallels between arthropods and vertebrates reflect a very limited number of solutions to problems in behavior that are available within the confines of physical laws
