Natural Particulars:

Natural Particulars Anthony Grafton, Nancy G. Siraisi, 1999 Recently the history of science in early modern Europe has been both invigorated and obscured by divisions between scholars of different schools One school tends to claim that rigorous textual analysis provides the key to the development of science whereas others tend to focus on the social and cultural contexts within which disciplines grew This volume challenges such divisions suggesting that multiple historical approaches are both legitimate and mutually complementary **Tradition, Rationality, and Virtue** Thomas D.

Conservation Reconsidered Charles T. Rubin, 2000 The prominent contributors in *Conservation Reconsidered* establish a fundamentally original view of the conservation movement and the impact of public policy on nature This collection of essays articulate the belief that the thinkers and actors who helped develop the conservation movement notably John Muir Theodore Roosevelt Gifford Pinchot and Aldo Leopold have been seriously misunderstood by scholars who have analyzed them in the context of contemporary environmental debates Conservationism the contributors argue was a diverse movement dealing with difficult questions about the relationship of human beings to nature in a modern liberal democratic state The essays place conservationism within the framework of 19th century American political thinkers including Darwin Emerson Thoreau and Olmsted and they illuminate perennial questions about citizenship and our place in the natural world *Conservation Reconsidered* takes a new look at what is problematic about the legacy of American conservationism and explores worthy alternatives to the dominant environmentalist thinking of today
