

SPECIES & ECOSYSTEM SURVIVAL

Every species plays a crucial role in the health and survival of its ecosystem. From food production to oxygen generation, pollination to seed dispersal, pest control, disease reduction, and waste recycling, each plant, animal and fungi is part of an intricate web of interconnected life.

Species roles are illustrated here using miombo woodland as an example – a forest type found across much of southern Africa.

1 Plants absorb carbon dioxide from the air and release oxygen that animals need to survive. Plants store carbon in their leaves, trunks and roots as well as in the soil around them. This reduces the amount of carbon dioxide entering the atmosphere and therefore helps reduce global warming. Plants help maintain water supplies by storing and releasing moisture, including floods and droughts.

2 Plants use energy from the sun, to convert carbon dioxide and water into glucose. This is the basis of food for almost all species in the world. Herbivores like elephants and antelopes eat plants and they can become food for carnivores like lions and wild dogs.

3 Flowering plants need to be pollinated to reproduce. Different species of insects, birds and mammals pollinate different plants. For example bats and moths pollinate baobab trees and many miombo species are pollinated by bees.

4 Many plants rely on animals to disperse their seeds, enabling new plants to grow. For example elephants, primates and birds eat fruit that disperses the seeds, fertilised by their dung, far from the parent plant.

5 Nature recycles everything, with many different species contributing to nutrient transfer. For example, dung beetles collect and bury faeces, cycling nutrients back into the soil. Millipedes feed on dead and decaying organic matter and transfer nutrients through their droppings.

6 Every species – including humans – contributes to ecosystem balance. Disrupting this balance can cause more negative consequences. For example, if natural habitat is reduced by humans, invasive animals like baboons and elephants may threaten existing people's farms, leading to community tensions. Disrupting habitat also increases the risk of disease transfer to humans.

7 There is a constant cycle of life and death, with many species helping dispose of dead matter, keeping the environment clean and healthy. For example vultures dispose of carcasses, helping prevent the spread of diseases like anthrax and rabies.

8 A healthy ecosystem has a balance of predators that keep pest populations under control. For example crocodiles eat as hippos and giraffes eat reeds, keeping their populations low. Many predators and omnivores reduce the number of sap-sucking insects such as mosquitoes and flies.

Nature And Science Of Survival:

The Nature and Science of Survival Jane Burton, Kim Taylor, 2001 Describes how plants and animals adapt to different environments in order to survive Science of Human Nature and Art of Sustainable Happiness: Arrive 2 B U Emma-Shivani Brown Ph.D., 2019-09-30 Ultimately people want to be happy For most of us we seek happiness outside of ourselves We hope that our pursuit of a higher paying job a nicer house a new mate a faster speedboat etc will bring happiness These external desires might satisfy our appetite in the short term but when the shiny newness inevitably wears off we find ourselves feeling emotionally bankrupt and often in overwhelming debt We all want to know the secret to happiness even though very few of us actually have the motivation and dedication to work for it Recognizing and changing patterns of behavior that don't serve us adopting positivity practices living mindfully and flourishing often require a substantial life overhaul not just a makeover Here's the secret there is no secret to happiness Much research has been done and countless books classes conferences and programs come out every year each with a new take on this age old enigma Science, God and the Nature of Reality Sarah S. Knox, 2010 This philosophy of science book is written by a biomedical scientist for a lay audience but is well referenced for use by scientific readers and college course curricula Its thesis is that the current paradigm in the biological and medical sciences which is responsible for rejecting the existence of a Divine Being is outdated There is no factual basis for creating a dichotomy between evolution and Divine Design Misconceptions about the nature of reality i.e. the belief that matter is the ultimate cause of everything we think feel say and do have made it easy to ignore data demonstrating an important biological role for the energetic aspects of matter and to leave the question of the existence of a Divine being to the purview of philosophy and religion The author uses extensive scientific data to highlight the inconsistencies in current theories and relates her personal journey in trying to explain her observations with purely mechanistic theories Her ultimate conclusion is that the existence or non existence of God can no longer be ignored by scientists It is one of the most important scientific questions there is and like many other issues that were formally relegated to the domain of philosophy can and should be investigated by modern science Teaching About Evolution and the Nature of Science National Academy of Sciences, Division of Behavioral and Social Sciences and Education, Board on Science Education, Working Group on Teaching Evolution, 1998-04-06 Today many school students are shielded from one of the most important concepts in modern science evolution In engaging and conversational style Teaching About Evolution and the Nature of Science provides a well structured framework for understanding and teaching evolution Written for teachers parents and community officials as well as scientists and educators this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms it explores how scientists approach the question of evolution and it illustrates the nature of science as a way of knowing about the natural world In addition the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution The book includes sample activities for teaching about

evolution and the nature of science For example the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution Background information materials and step by step presentations are provided for each activity In addition this volume Presents the evidence for evolution including how evolution can be observed today Explains the nature of science through a variety of examples Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction Answers frequently asked questions about evolution Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council and offers detailed guidance on how to evaluate and choose instructional materials that support the standards Comprehensive and practical this book brings one of today s educational challenges into focus in a balanced and reasoned discussion It will be of special interest to teachers of science school administrators and interested members of the community *Science and Ethics* Keith Lehrer,1987

O'Briant,2015-03-13 This book exposes the attempt to teach atheistic evolution to students often ridiculing their faith in God The classrooms in our schools have become the battlegrounds for the minds of our children Since the introduction of evolution by Charles Darwin there has been a growing list of atheist professors who vigorously fight any religion The classrooms of America should not be the battlegrounds of any religion but evolution is a religion It has no place in the classroom since it does not offer any information that improves the teaching of any science class except evolution itself There is no proof of evolution only assertions innuendos credulity belief without proof and suppositions Fully one third of all geology textbooks deal with evolution which is founded only opinion and undocumented assertions Therefore it should be removed from all textbooks Dr David Menton who taught medicine at the Washington School of Medicine in St Louis Missouri for twenty five years stated that he never once needed to reference evolution in any medical class A coalition of organizations such as the National Academy of Sciences whose members are 93% atheist or agnostic and the National Center for Science and Education control most of the government grants intended for schools use fully support the atheism of evolution and they
