Becoming Bamboo Robert Edgar Carter, 1992 The many problems we face in today's world among them war environmental destruction religious and racial intolerance and inappropriate technologies demand that we carefully re-evaluate such issues as our relation to the environment the nature of progress ultimate purposes and human values These are all issues Robert Carter explains that are intimately linked to our perception of life's meaning While many books discuss life's meaning either analytically or prescriptively Carter addresses values and ways of meaningful living from a broader perspective using Japanese philosophy to augment his investigation He examines Martin Heidegger's distinction between dwelling and existing in the world Lawrence Kohlberg's stage seven of human moral development and the works of Viktor Frankl Carol Gilligan and Nel Noddings He applies hermeneutic and deconstructionist theory to the question of meaning and explores the feminist contribution to ethics and its relation to the interconnectedness of things celebrated in Zen and Shinto thought Bridging various dichotomies such as East West reason emotion male female and caring justice Carter shows that ethics environmental concern caring and joy in living are dependent on the growth and transformation of the self Only by becoming aware of the interrelatedness of things Carter reveals can we become as supple and as strong as the bamboo tree long the symbol of longevity and constancy

N. Petrov,2003 One of the cornerstones of life s wonders is the vast array of species filling the planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life s variety

Looking to the Future Derek Hodson,2011-10-25 In advocating an action oriented and issues based curriculum this book takes the position that a major but shamefully neglected goal of science and technology education is to equip students with the knowledge skills attitudes and values to confront the complex and often ill defined socioscientific issues they encounter in daily life as citizens in an increasingly technology dominated world carefully critically confidently and responsibly In outlining proposals for addressing socioscientific issues through a curriculum organized in terms of four

increasingly sophisticated levels of consideration the author adopts a highly critical and politicized stance towards the norms and values that underpin both scientific and technological development and contemporary scientific engineering and medical practice criticizes mainstream STS and STSE education for adopting a superficial politically naive and hence educationally ineffective approach to consideration of socioscientific issues takes the view that environmental problems are social problems occasioned by the values that underpin the ways in which we choose to live and urges teachers to encourage students to reach their own views through debate and argument about where they stand on major socioscientific issues including the moral ethical issues they often raise More controversially the author argues that if students are to become responsible and politically active citizens the curriculum needs to provide opportunities for them to experience and learn from sociopolitical action The relative merits of direct and indirect action are addressed notions of learning about action learning through action and learning from action are developed and a case is made for compiling a user friendly database reflecting on both successful and less successful action oriented curriculum initiatives Finally the book considers some of the important teacher education issues raised by this radically new approach to teaching and learning science and technology The book is intended primarily for teachers and student teachers of science technology and environmental education graduate students and researchers in education teacher educators curriculum developers and those responsible for educational policy The author is Emeritus Professor of Science Education at the Ontario Institute for Studies in Education University of Toronto Adjunct Professor of Science Education at the University of Auckland and Visiting Professor of Science Education at the University of Hong Kong His research interests include considerations in the history philosophy and sociology of science and their implications for science and technology education STSE education and the politicization of both students and teachers science curriculum history multicultural and antiracist education and teacher education via action research *Global Environment Outlook 3 - Arabic Paperback* ,
