Dyes and Pigments Ahmet Gürses, Metin Açıkyıldız, Kübra Güneş, M. Sadi Gürses, 2016-05-04 In this book the authors go back to basics to describe the structural differences between dyes and pigments their mechanisms of action properties and applications They set the scene by explaining the reasons behind these differences and show how dyes are predominately organic compounds that dissolve or react with substrates whereas pigments are predominantly finely ground inorganic substances that are insoluble and therefore have a different mode of coloring They also describe the role of functional groups and their effect on dyeing ability contrasting this with the way in which pigments cause surface reflection or light absorption depending on their chemical and crystalline structure and relative particle size The book explores the environmental impact of dyes in a section that covers the physical chemical toxicological and ecological properties of dyes and how these are used to assess their effect on the environment and to estimate whether a given product presents a potential hazard Lastly it assesses how in addition to their traditional uses in the textile leather paper paint and varnish industries dyes and pigments are indispensable in other fields such as microelectronics medical diagnostics and in information recording techniques
