Navigating The Tmdl Proceb Listing And Delisting:

Navigating the TMDL Process Paul L. Freedman, 2003-12-01 Narrative water quality criteria are an integral component of States water quality standards but they pose special problems when incorporated into the TMDL process The TMDL process is typically a quantitative activity defining numeric allowable loads necessary to meet a numeric water quality objective Narrative criteria confound development of quantitative TMDLs due to the absence of these numeric criteria The objective of this research was to improve the methods for addressing narrative water quality criteria in the TMDL process The problems associated with narrative criteria in the TMDL process are known in general terms but prior to this research there has not been a thorough review of the use of narrative criteria in TMDLs nor broad guidance on how to address narrative criteria in the TMDL process The approach taken for this research was to define the range of problems associated with all types of narrative criteria by means of a comprehensive review of 120 narrative TMDLs and provide guiding principles to help address these problems

Navigating the TMDL Process J. Hyde, 2003-06-30 This report offers recommendations for improving the listing and delisting process emerging from surveys of 8 states and review discussion with other selected states The report evaluates alternatives and options for reducing uncertainty in each of the four major listing delisting elements including WQS designated uses and water quality criteria water quality data acquisition comparative methodology list content and format Based on these state surveys reviews of the FACA Committee NRC Subcommittee on TMDLs and Water Quality Management and Project Team experience the report proposes a set of minimum activities a number of alternatives and options and a comprehensive approach for reducing uncertainty in the listing and delisting process

Mississippi River Water Quality and the Clean Water Act National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on the Mississippi River and the Clean Water Act, 2008-02-08 The Mississippi River is in many ways the nation's best known and most important river system Mississippi River water quality is of paramount importance for sustaining the many uses of the river including drinking water recreational and commercial activities and support for the river's ecosystems and the environmental goods and services they provide The Clean Water Act passed by Congress in 1972 is the cornerstone of surface water quality protection in the United States employing regulatory and nonregulatory measures designed to reduce direct pollutant discharges into waterways The Clean Water Act has reduced much pollution in the Mississippi River from point sources such as industries and water treatment plants but problems stemming from urban runoff agriculture and other non point sources have proven more difficult to address This book concludes that too little coordination

among the 10 states along the river has left the Mississippi River an orphan from a water quality monitoring and assessment perspective Stronger leadership from the U S Environmental Protection Agency EPA is needed to address these problems Specifically the EPA should establish a water quality data sharing system for the length of the river and work with the states to establish and achieve water quality standards The Mississippi River corridor states also should be more proactive and cooperative in their water quality programs For this effort the EPA and the Mississippi River states should draw upon the lengthy experience of federal interstate cooperation in managing water quality in the Chesapeake Bay **The British**
