Pectines And Pectinases:

Pectins and Pectinases J. Visser,A.G.J. Voragen,1996-12-06 Pectins are one of the classes of complex structural plant cell wall polysaccharides They are localized in the middle lamella and primary cell wall of higher plants Pectins have a long standing use as gelling agents whereas their enzymatic degradation or modification plays an important role in the processing of agricultural crops and the manufacturing of foods and beverages Progress in pectin and pectinase research has been most prominent in two areas over the past 5 years The first one concerns the analysis and elucidation of the complex chemical structure of pectin and identification of novel enzymes involved in the degradation of these structures The second area concerns the mode of action and the 3 dimensional structure of various pectin degrading enzymes as well as the cloning of a large number of genes encoding enzymes involved in pectin degradation and modification This book covers the following topics First the structural physical and chemical properties of pectin are treated followed by information about its biosynthesis and about the biological effects of pectin and its degradation products in biological systems such as plant pathogen interactions and human nutrition Identification of novel enzymes the mode of action of different pectinases and the 3 D structure of bacterial pectate lyases forms the second block This is followed by the genetics and regulation of pectinase biosynthesis in saprophytic and phytopathogenic microbial systems as well as in plant systems Finally developments in pectin manufacturing and application of pectinases in traditional food beverage and novel technologies are treated This book is meant for those actively involved in fundamental and applied aspects of pectin and pectinase research but it is also of value for those interested in plant cell wall biosynthesis and architecture phytopathology food technology and human nutrition This book not only reflects the present status of research in the field but it will turn out to be a very useful reference work as well

Advances in Pectin and Pectinase Research A. G. J. Voragen,Henk Schols,Richard Visser,2003-02-28 It is clearly demonstrated that significant progress has been made during the past seven years **Pectins and pectinases** H.A. Schols,R.G.F. Visser,A.G.J. Voragen,2023-09-04 Pectin extracted from suitable plant sources is used as food ingredient for its gelling stabilizing and thickening functionalities Pectic substances also have a great impact on the quality of fresh and processed foods particularly fruits and vegetables Plant products fresh extracted or processed constitute a large part of the human diet As a fibre naturally present in these food products pectic substances fulfil a nutritional function and are increasingly of interest as a health promoting polysaccharide Pectin is one of the major components of the cell wall of dicotyledonous plants and probably one of the most complex macromolecules in nature This book provides an update account of the most significant state of the art research on pectin and demonstrates that significant progress has been made in recent years The book addresses progress made in the fields of biosynthesis and health modulating activities of pectin fractions among other things Research reported uses the most advanced current spectroscopic techniques and immunodetection methods combined with microscopy and chromatography genomics of pectic enzymes of *Aspergillus niger* and interaction of

pectins with proteins The progress documented in this book allows us to increasingly identify and influence the functionality of pectins and pectic enzymes both in vitro after isolation as well as in the plants themselves This knowledge is also reflected in new applications of pectin and pectin degrading enzymes Pectins and Pectinases is of interest to beginning and advanced researchers and food specialists in academic and commercial food industry settings globally *Advances in Pectin and Pectinase Research* Fons Voragen, Henk Schols, R.G.F. Visser, 2013-03-09 The second international symposium on Pectins and Pectinases was organised by Wageningen University and Research Centre and was held in Rotterdam May 6 10 2001 This fruitful meeting was attended by around 130 participants from more than 20 countries representing almost all of the groups industries working worldwide on pectins and pectinases Following the first meeting on this subject held in December 1995 the symposium definitely forms a platform for researchers and industries working in the field all within their own discipline and expertise The symposium book contains most keynote lectures and other oral presentations and provides an update about the current research It is clearly demonstrated that significant progress has been made during the past seven years The progress in the elucidation of the chemical structure of pectin and mode of action and 3 D structure of the pectin degrading enzymes allows us more and more to identify and influence the functionality of pectins and pectic enzymes both in vitro after isolation as well as in the plants themselves in planta Other contributions deal with new applications of both pectin and pectin degrading enzymes while more and more attention is paid to health and nutritional aspects of pectins **Pectins** Martin Alberto Masuelli, 2022-07-06 Pectin is an industrial product of certain fruit peels that contain it such as citrus fruits apples pears grapes plums beets sunflowers and so on It is the traditional gelling agent for jams and jellies but its applications extend to fruit products for food dairy dessert soft drink pharmaceutical and other industries This book discusses pectin production pectin biotechnology and pectin applications Chapters cover such topics as the production of pectin from citrus fungal pectinases in food technology pharmaceutical applications of pectin and more **Integrated Membrane Operations** Alfredo Cassano, Enrico Drioli, 2013-12-12 This comprehensive reference work describes in an instructive manner the combination of different membrane operations such as enzyme membrane reactors EMR s microfiltration MF ultrafiltration UF reverse osmosis RO nanofiltration NF and osmotic distillation OD is studied in order to identify their synergistic effects on the optimization of processes in agro food productions fruit juices wines milk and vegetable beverages and wastewater treatments within the process intensification strategy The introduction to integrated membrane operations is followed by applications in the several industries of the food sector such as valorization of food processing streams biocatalytic membrane reactors and membrane emulsification **Industrial Applications** Heinz Osiewacz, 2001-10-09 Mycology the study of fungi originated as a subdiscipline of botany and was a descriptive discipline largely neglected as an experimental science until the early years of this century A seminal paper by Blakeslee in 1904 provided evidence for self incompatibility termed heterothallism and stimulated interest in studies related to the control of

sexual reproduction in fungi by mating type specificities Soon to follow was the demonstration that sexually reproducing fungi exhibit Mendelian inheritance and that it was possible to conduct formal genetic analysis with fungi The names Burgeff Kniep and Lindegren are all associated with this early period of fungal genetics research These studies and the discovery of penicillin by Fleming who shared a Nobel Prize in 1945 provided further impetus for experimental research with fungi Thus began a period of interest in mutation induction and analysis of mutants for biochemical traits Such fundamental research conducted largely with *Neurospora crassa* led to the one gene one enzyme hypothesis and to a second Nobel Prize for fungal research awarded to Beadle and Tatum in 1958 Fundamental research in biochemical genetics was extended to other fungi especially to *Saccharomyces cerevisiae* and by the mid 1960s fungal systems were much favored for studies in eukaryotic molecular biology and were soon able to compete with bacterial systems in the molecular arena
