Dairy Powders and Concentrated Products Adnan Y. Tamime, 2009-11-16 The economic importance of dairy powders and concentrated products to dairy producing countries is very significant and there is a large demand for them in countries where milk production is low or non-existent. In these markets dairy products are made locally to meet the demand of consumers from recombined powders, anhydrous milk fat and concentrated dairy ingredients, evaporated and sweetened condensed milk. This volume is the latest book in the Technical Series of The Society of Dairy Technology. Numerous scientific data have been available in journals and books in recent years and the primary aim of this text is to detail in one publication the manufacturing methods, scientific aspects and properties of milk powders, full fat skimmed and high protein powders made from milk retentates, whey powders, WP including WP concentrates, lactose caseinates, sweetened condensed milk, evaporated milk and infant baby feed. The book also covers the international standards relating to these products for trading purposes as well as the hazards such as explosion and fire that may occur during the manufacture of dairy powders. The authors who are all specialists in these products have been chosen from around the world. The book will be of interest to dairy scientists, students, researchers and dairy operatives around the world. Guidelines for Engineering Design for Process Safety CCPS (Center for Chemical Process Safety), 2010-10-12. Inherently safer plants begin with the initial design. Here is where integrity and reliability can be built in at the lowest cost and with maximum effectiveness. This book focuses on process safety issues in the design of chemical, petrochemical and hydrocarbon processing facilities. It discusses how to select designs that can prevent or mitigate the release of flammable or toxic materials which could lead to a fire, explosion or environmental damage. All engineers on the design team, the process hazard analysis team and those who make basic decisions on plant design will benefit from its comprehensive coverage, its organization and the extensive references to literature, codes and standards that accompany each chapter.

Handbook of Highly Toxic Materials Handling and Management Stanley S. Grossel, Daniel A. Crowl, 1994-12-13 This handbook provides practical technological information on the toxicological aspects of dangerously hazardous chemicals the design and maintenance of facilities for processing them as well as preventive and mitigative procedures for controlling their accidental release Key areas of industrial toxicology including major routes of occupational exposure and general toxic properties of selected chemicals are discussed Handbook of Batch Process Design P.N. Sharratt, 2012-12-06 Batch processes are used to manufacture many fine organic chemicals and as such they can be considered to underpin much of the modern chemical industry Despite widespread use and a consequent huge contribution to wealth creation batch processes have attracted limited attention outside the user industries Batch chemicals processing uses a number of core techniques and technologies such as scheduling and sequence control agitation and batch filtration The combination of these technologies with often complex chemistry the multi purpose nature of much of this type of plant the distinctive safety and environmental issues and a fast moving commercial environment makes the development of a successful batch process a considerable challenge for the chemist or engineer The literature on the topics covered in this book is fragmented and often not easily accessible so this handbook has been written to address this problem and to bring together design and process analysis methods in the core areas of batch process design By combining the science and pragmatism required in the development of successful batch processes this new book provides answers to real problems in an accessible and concise way Written by an international team of authors drawn from industry consulting and academe this book is an essential part of the library of any chemist technologist or engineer working on the development of new or existing batch processes
