Prostate Cancer Biology Genetics And The New Therapeutics:

Prostate Cancer Leland W.K. Chung, 2000-12-15 This book embraces the wide field of prostate cancer genetics biology and therapy It seems most appropriate to dedicate it to Donald S Coffey PhD whose research vision is an inspiration to his colleagues and friends Unraveling the secrets of prostate cancer is an intricate and sometimes frustrating process involving many researchers and many institutions No one has seen through to the end of this road and the list of researchers who have contributed to our understanding of the disease processes of prostate cancer is already a long one But Donald Coffey stands out in his personal qualities as surely as in his roles as teacher and researcher In the dedicatory article that begins this volume Dr Ward has spoken for all of us about Don Coffey's unique determination to build the road to defeat prostate cancer This book is divided into three sections Cancer Genetics Cancer Biology and Cancer Therapeutics These sections like the skill and knowledge of the contributors overlap in many dimensions The divisions between sections are somewhat arbitrary and have been made expressly for the convenience of the reader The reader will find chapters in each section that illuminate aspects of the genetics biology and therapy of prostate cancer Nothing better illustrates the breadth of the research being conducted today by these distinguished groups who truly understand and appreciate the power of multi disciplinary and translational approaches to deciphering the intricacy of the object of this research Prostate Cancer Leland W. K.

Management of Prostate Cancer Eric A. Klein,2004-05-07 Although much progress has been made in the four years since the first edition of Management of Prostate Cancer prostate cancer remains a significant biological medical and personal challenge for millions of men In this interval some important trends and observations have emerged that represent real progress in the field and which will shape the direction of clinical practice and research in the next 5 10 years These observations include 1 a decline in prostate related cancer mortality in the United States likely owing to a combination of factors including screening more aggressive and earlier therapy and improvements in specific therapies 2 a significant downward pathological stage migration so that an individual's chance of cure for a given stage grade and PSA is better now than it was early in the PSA era even without associated improvements in individual therapies 3 the recognition of new PSA isoforms that may refine screening strategies 4 several randomized phase III clinical trials demonstrating survival advantages of one form of therapy over another in selected populations external beam radiation therapy with adjuvant hormones vs radiotherapy alone radical prostatectomy vs observation 5 a focus on the biology of bone and bone metastasis and new agents that reduce skeletal related events and which may inhibit the growth of new metastases 6 second generation anti PSMA antibodies with improved potential for imaging and therapy 7 the development and widespread adoption of nomograms that assist in clinical decision making for individual patients 8 the identification of new genes that

Brain Tumors Francis Ali-Osman,2007-10-28 Exciting new developments and discoveries of the last two decades are beginning to shed light on the complex biology of brain tumors and are advancing our understanding of the cellular and molecular processes involved in their initiation progression and clinical and biological behavior The disease process in brain tumors is quite complex and the resulting tumors are characterized by a high degree of biological and clinical diversity Thus despite the advances of the last two decades prognosis for patients with malignant brain tumors remains abysmal Significant progress in the diagnosis treatment and ultimately prevention of these tumors will require both the timely harnessing of the advances in basic and clinical brain tumor research and a continuing concerted effort at increasing our understanding of brain tumor biology in particular the molecular genetic changes and perturbations of cellular pathways involved in brain oncogenesis and which drive the biological and clinical behavior of the tumors Brain tumor diagnosis and prognosis which is still largely based on histopathology and other clinical criteria will in the future acquire a significant molecular component with the incorporation of knowledge of genes that are mutated over expressed deleted silenced or functionally altered in the tumors Treatment strategies for brain tumors rather than being empirical will be rationally developed based on an understanding of the cellular and molecular mechanisms and targets that have been activated suppressed or otherwise altered
