[Family Communication about Genetics](#) Clara L. Gaff, Carma L. Bylund, 2010-07-01 Genetics is in all senses a family affair The diagnosis of a genetic condition affects not only the patient and biological family members who may themselves be at risk but also family more generally as support may be sought from those considered kin and who may or may not be at risk themselves It is considered best practice in genetic consultations to

explore who will be informed within the family when a genetic condition or risk is diagnosed particularly when the health of other family members is at risk There is little guidance or consensus on how to achieve the implicit goal of informed family members while respecting patient confidentiality however There is a need for practitioners to be aware of the dynamics of family communication and to have guidance about how they may sensitively facilitate communication about genetics within families This handbook facilitates the development of clinical practices relating to family communication about genetics Relevant theories of family communication are summarized and related to a clinical genetics milieu and from this frameworks for practitioners are presented A book of this nature is particularly timely as the completion of the Human Genome Project will result in an unprecedented amount of information about genetic constitution and health risks becoming available to individuals and their families The presence of a potential genetic condition in a family is not a new phenomenon However the growth in testing for genetic conditions common complex conditions and variants that may influence health as well as drug metabolism means that a greater number of individuals will face decisions about communicating this information to their relatives Many health professionals in all levels of health care will be confronted with issues of responsibility and practice in family communication about genetic information as they become providers of this testing

**Collection and Use of Cancer Family History in Primary Care** Nadeem Qureshi,2009-05 This systematic review was undertaken to 1 evaluate the accuracy of patient reporting of cancer family history 2 identify and evaluate tools designed to capture cancer family history that are applicable to the primary care setting and 3 identify and evaluate risk assessment tools RATs in promoting appropriate management of familial cancer risk in primary care settings For family history tools FHxTs and RATs studies were limited to those applicable to primary care settings Conclusions Informants reporting their cancer family history have greater accuracy for relatives free of cancer than those with cancer Reporting accuracy may vary among different cancer types Charts and tables

Concordance in Medical Consultations Kristian Pollock,2018-10-08 The capacity of professional medicine to resist change and also concordance is impressive but perplexing It is one of the issues I seek to address in this book I suggest that a preoccupation with trying to change the relationship between the professional patient dyad has deflected attention from the extent to which such relations are embedded in and constrained by wider administrative and organisational structures especially as these relate to the operation of professional hierarchies and interprofessional deference and allegiances Barriers to change also result from the inertia of a system which has evolved a highly stylised etiquette as an adaptive mechanism to contain the difficulties and tensions intrinsic to the medical consultation Its therapeutic purpose and potential are often subordinate to the goal of achieving success as a social encounter The principles of concordance are deeply challenging to traditional professional roles and status However medicine has always displayed an ability to block change through tactics of appropriation and incorporation Professionals have often shown particular difficulty giving up their monopoly of expertise and in acknowledging the legitimacy of the patient perspective Although the term concordance has become quite widely used its meaning is usually subverted by its employment as a synonym for compliance albeit informed compliance A slightly more sophisticated version values professional elicitation of the patient perspective in order to more accurately tailor information as a means of overcoming the unhelpful misconceptions that impede compliance The original emphasis on the consultation as a negotiated exchange in which the professional has something of value to learn from the patient has largely been lost The rhetoric of modernity and change provides an effective mask for inertia and conservatism Preface
