Terrorism and Bioterrorism S.k. Prasad,2009      *At the Heart of Terror* Monte Palmer,Princess Palmer,2004 This accessible and deeply informed book examines the threat that Muslim extremists pose to America and suggests steps that will facilitate U S efforts to defeat them

*Countering Bioterrorism* National Research Council,Institute of Medicine,Committee on Science and Technology for Countering Terrorism,Panel on Biological Issues,2003-01-03 The attacks of September 11 and the release of anthrax spores revealed enormous vulnerabilities in the U S public health infrastructure and suggested similar vulnerabilities in the agricultural infrastructure as well The traditional public health response surveillance intelligence prevention detection response recovery and attribution is the paradigm for the national response not only to all forms of terrorism but also to emerging infectious diseases Thus investments in research on bioterrorism will have enormous potential for application in the detection prevention and treatment of emerging infectious diseases that also are unpredictable and against which we must be prepared The deciphering of the human genome sequence and the complete elucidation of numerous pathogen genomes our rapidly increasing understanding of the molecular mechanisms of pathogenesis and of immune responses and new strategies for designing drugs and vaccines all offer unprecedented opportunities to use science to counter bioterrorist threats But these same developments also allow science to be misused to create new agents of mass destruction Hence the effort to confront bioterrorism must be a global one

Countering Bioterrorism makes the following recommendations Recommendation 1 All agencies with responsibility for homeland security should work together to establish stronger and more meaningful working ties between the intelligence S T and public health communities Recommendation 2 Federal agencies should work cooperatively and in collaboration with industry to develop and evaluate rapid sensitive and specific early detection technologies Recommendation 3 Create a global

network for detection and surveillance making use of computerized methods for real time reporting and analysis to rapidly detect new patterns of disease locally nationally and ultimately internationally The use of high throughput methodologies that are being increasingly utilized in modern biological research should be an important component of this expanded and highly automated surveillance strategy Recommendation 4 Use knowledge of complex biological patterns and high throughput laboratory automation to classify and diagnose infections in patients in primary care settings Recommendation 5 USDA should create an agency for control and prevention of plant disease This agency should have the capabilities necessary to deal effectively with biothreats

Bioterror R. William Johnstone,2008-09-30 This book uses the 2001 anthrax attacks as its point of departure for an analysis of the past present and future of America s preparedness to deal with major challenges to public health including bioterrorism and pandemic flu The study identified the strength and weaknesses of the system while making recommendations for improvements This allows the U S to be better prepared if faced with a larger or different biological threat This book looks for linkages not only between bioterrorists and pandemic defenses but also between public health security and the wider field of homeland security Johnstone highlights some key foundation plans and strategies that are to serve as a basis for public health security Failure to address these crucial issues not only creates unfounded mandates but also inhibits priority setting leadership and accountability Bioterror Anthrax Influenza and the Future of Public Health Security utilizes a large number of sources from within both the public health and public policy communities to document how each sector responded to the anthrax attacks and re emergent infectious diseases and how those responses have evolved to the present day As with other areas of homeland security sustained progress in public health security is not likely until basic questions about funding priorities and leadership are successfully addressed In the response to the only mass casualty event in the United States since 2001 Hurricane Katrina and in various emergency simulation exercises such as TOPOFF series major performance deficiencies have been observed This book brings together a variety of sources the best available evidence on the status of the public health security system at three distinct points before 2001 during and immediately after the anthrax attacks and in the period from 2004 to the present
