O'Higgins, 2020 Aquatic ecosystems are rich in biodiversity and home to a diverse array of species and habitats providing a wide variety of benefits to human beings Many of these valuable ecosystems are at risk of being irreversibly damaged by human activities and pressures including pollution contamination invasive species overfishing and climate change Such pressures threaten the sustainability of these ecosystems their provision of ecosystem services and ultimately human well being Ecosystem based management EBM is now widely considered the most promising paradigm for balancing sustainable development and biodiversity protection and various international strategies and conventions have championed the EBM cause and the inclusion of ecosystem services in decision making This open access book introduces the essential concepts and principles required to implement ecosystem based management detailing tools and techniques and describing the application of these concepts and tools to a broad range of aquatic ecosystems from the shores of Lough Erne in Northern Ireland to the estuaries of the US Pacific Northwest and the tropical Mekong Delta      **Aquatic Biodiversity II** H. Segers, K. Martens, 2006-01-20 Freshwater Biodiversity is a much underestimated component of global biodiversity both in its diversity and in its potential to act as models for fundamental research in evolutionary biology and ecosystem studies Freshwater organisms also reflect quality of water bodies and can thus be used to monitor changes in ecosystem health The present book comprises a unique collection of primary research papers spanning a wide range of topics in aquatic biodiversity studies and including a first global assessment of specific diversity of freshwater animals The book also presents a section on the interaction between scientists and science policy managers A target opinion paper lists priorities in aquatic biodiversity research for the next decade and several reactions from distinguished scientists discuss the relevance of these items from different points of view fundamental ecology taxonomy and systematics needs of developing countries present day biodiversity policy at European and at global scales It is believed that such a platform for the interaction between science and science policy is an absolute necessity for the efficient use of research budgets in the future      **Aquatic Biodiversity** Koen Martens, 2012-12-06 In this age of increased fundamental and applied research on biodiversity no single volume was as yet devoted to the various temporal and spatial aspects of aquatic biodiversity The present book is published in honour of Professor Henri Dumont Ghent Belgium at the occasion of his retirement as Editor in Chief of Hydrobiologia The volume presents a selection of contributions on aquatic biodiversity written by colleagues from the editorial board fellow editors of aquatic journals and former students and collaborators Contributions deal with a wide spectrum of topics related to aquatic

biodiversity and cover fields such as actual and palaeolimnology taxonomy and fundamental and applied limnology Even reconnaissance chapters on management and cultural impact of water bodies are included The book combines state of the art contributions in aquatic sciences *Aquatic Biodiversity Conservation and Ecosystem Services* Shin-ichi Nakano,Tetsukazu Yahara,Tohru Nakashizuka,2016-06-02 This volume examines the topic of local biodiversity conservation in the Asia Pacific region one of the most rapidly changing areas in the world With a focus on aquatic systems this book offers insight on the state of local biodiversity challenges in management and conservation of biodiversity and newly developed methods for monitoring biodiversity In addition because the service provided by an ecosystem for humans is interlinked with conservation the final part is dedicated to evaluating the socioeconomic aspect of ecosystem services with special reference to local biodiversity In effect all contributions provide information that is invaluable for effective conservation and sustainable use of biodiversity This work will interest all stakeholders in biodiversity conservation including policy makers NPOs NGOs environment related industries and biodiversity researchers not only in the Asia Pacific region but also across the entire globe The State of the World's Aquatic Genetic Resources for Food and Agriculture Food and Agriculture Organization of the United Nations,2019-07-24 The conservation sustainable use and development of aquatic genetic resources AqGR is critical to the future supply of fish The State of the World s Aquatic Genetic Resources for Food and Agriculture is the first ever global assessment of these resources with the scope of this first Report being limited to cultured AqGR and their wild relatives within national jurisdiction The Report draws on 92 reports from FAO member countries and five specially commissioned thematic background studies The reporting countries are responsible for 96 percent of global aquaculture production The Report sets the context with a review of the state of world s aquaculture and fisheries and includes overviews of the uses and exchanges of AqGR the drivers and trends impacting AqGR and the extent of ex situ and in situ conservation efforts The Report also investigates the roles of stakeholders in AqGR and the levels of activity in research education training and extension and reviews national policies and the levels of regional and international cooperation on AqGR Finally needs and challenges are assessed in the context of the findings from the data collected from the countries The Report represents a snapshot of the present status of AqGR and forms a valuable technical reference document particularly where it presents standardized key terminology and concepts **Biodiversity** National Academy of Sciences/Smithsonian Institution,Division on Earth and Life Studies,Commission on Life Sciences,E.O. Wilson,1988-01-01 This important book for scientists and nonscientists alike calls attention to a most urgent global problem the rapidly accelerating loss of plant and animal species to increasing human population pressure and the demands of economic development Based on a major conference sponsored by the National Academy of Sciences and the Smithsonian Institution Biodiversity creates a systematic framework for analyzing the problem and searching for possible solutions Hydrogeochemistry of Aquatic Ecosystems Sughosh Madhav,Virendra Bahadur Singh,Manoj Kumar,Sandeep Singh,2022-11-30 Hydrogeochemistry of Aquatic Ecosystems Discover the geological

foundation of global water supply focusing on resource conservation and restoration Hydrogeochemistry explores the connections between the geology of a region and the chemical characteristics and quality of its water sources including such factors as erosion evaporation and increasingly man made activities With the emergence of climate change as a major factor reshaping water quality and availability the need to understand interactions between hydrochemistry and geology has never been greater Hydrogeochemistry of Aquatic Ecosystems meets this need by offering foundational knowledge about the hydrochemistry of different types of aquatic systems the nature of their interactions with various pollutants and geological processes and the possibilities and dangers of human intervention With a particular focus on aqueous resource conservation and restoration this is a vital timely guide to a potentially life saving subject Hydrogeochemistry of Aquatic Ecosystems readers will also find Detailed treatment of water sediment interactions arsenic and fluoride enrichment sand mining and many other subjects Coverage throughout of solute acquisition processes the carbon cycle and nutrient geochemistry Case studies from Asia and Africa demonstrating both natural and anthropogenic hydrogeochemical interactions Hydrogeochemistry of Aquatic Ecosystems is indispensable for professionals and researchers in environmental science and environmental engineering as well as scholars and advanced graduate students working on aquatic ecosystems or effects of climate change Biodiversity Laws, Policies and Science in Europe, the United States and China Giovanni
