Protein Metabolism In Renal Diseases:

Protein Metabolism in Renal Diseases Bradley J. Maroni, 1997-01-01 In this issue of Mineral and Electrolyte Metabolism an international group of experts summarizes our current knowledge of the influence of the spectrum of renal diseases on nutritional status and highlights areas for future research It begins with a review of the normal physiologic responses to alterations in protein intake and evidence that activation of specific intracellular pathways is responsible for increased protein and amino acid degradation in many pathologic states including uremia The impact of malnutrition on kidney function and the alterations in protein and amino acid metabolism induced by various renal diseases and dialysis are reviewed The benefits of prescribing low protein diets to treat patients with chronic renal failure are discussed Guidelines for assessing nutritional status are provided and therapeutic interventions to promote anabolism in malnourished renal patients are summarized The impact of nutritional status on patient outcomes is reviewed and recent evidence that hypoalbuminemia in dialysis patients is more closely related to inflammation than to dietary intake is discussed This publication provides an up to date review of the impact of renal disease on nutritional status and is directed towards the practicing nephrologist subspecialty trainee as well as dietitians managing patients with kidney disease [Kopple and Massry's Nutritional Management of Renal Disease](#) Joel D.
