advances in the structural understanding of PPIs as well as recent developments in modulator discovery      Protein-Protein Interactions Weibo Cai,Hao Hong,2012-03-30 Proteins are indispensable players in virtually all biological events The functions of proteins are coordinated through intricate regulatory networks of transient protein protein interactions PPIs To predict and or study PPIs a wide variety of techniques have been developed over the last several decades Many in vitro and in vivo assays have been implemented to explore the mechanism of these ubiquitous interactions However despite significant advances in these experimental approaches many limitations exist such as false positives false negatives difficulty in obtaining crystal structures of proteins challenges in the detection of transient PPI among others To overcome these limitations many computational approaches have been developed which are becoming increasingly widely used to facilitate the investigation of PPIs This book has gathered an ensemble of experts in the field in 22 chapters which have been broadly categorized into Computational Approaches Experimental Approaches and Others      **Proteomics and Protein-Protein Interactions** Gabriel Waksman,2006-12-22 Gabriel Waksman Institute of Structural Molecular Biology Birkbeck and University College London Malet Street London WC1E 7HX United Kingdom Address for correspondence Professor Gabriel Waksman Institute of Structural Molecular Biology Birkbeck and University College London Malet Street London WC1E 7H United Kingdom Email g waksman bbk ac uk and g waksman ucl ac uk Phone 44 0 207 631 6833 Fax 44 0 207 631 6833 URL http people cryst bbk ac uk ubcg54a Gabriel Waksman is Professor of Structural Molecular Biology at the Institute of Structural Molecular Biology at UCL Birkbeck of which he is also the director Before joining the faculty of UCL and Birkbeck he was the Roy and Diana Vagelos Professor of Biochemistry and Molecular Biophysics at the Washington University School of Medicine in St Louis USA The rapidly evolving field of protein science has now come to realize the ubiquity and importance of protein protein interactions It had been known for some time that proteins may interact with each other to form functional complexes but it was thought to be the property of only a handful of key proteins However with the advent of high throughput proteomics to monitor protein protein interactions at an organism level we can now safely state that protein protein interactions are the norm and not the exception      *Protein-Protein Interactions as New Drug Targets* Enno Klussmann,John Scott,2008-05-20 Disease relevant intracellular protein protein interactions occurring at defined cellular sites possess great potential as drug targets They permit highly specific pharmacological interference with defined cellular functions Drugs targeting such interactions are likely to act with fewer side effects than conventional medication influencing whole cell functions This book discusses therapeutically relevant protein protein interactions with a major focus on scaffolding proteins tethering signal transduction processes to defined cellular compartments by direct protein protein interactions Recent advances in the development of pharmacological agents interfering with protein protein interactions are highlighted      Protein-Protein Interactions Krishna Mohan Poluri,Khushboo Gulati,Sharanya Sarkar,2021-05-19 This book provides a comprehensive overview of the fundamental aspects of protein protein interactions PPI including a detailed account of the

**Influence of Protein-Protein Interactions (PPIs) on the Outcome of Viral Infections** Gorka Lasso Cabrera, Pablo Guardado-Calvo, Rohit K. Jangra, Eva Mittler, Mercè Llabrés, 2022-08-02 Role of Protein-Protein Interactions in Metabolism: Genetics, Structure, Function, 2nd Edition Amit V. Pandey, Colin J.

Henderson, Yuji Ishii, Michel Kranendonk, Wayne L. Backes, Ulrich M. Zanger, 2018-06-20 Genetic variations may change the structure and function of individual proteins as well as affect their interactions with other proteins and thereby impact metabolic processes dependent on protein-protein interactions. For example, cytochrome P450 proteins, which metabolize a vast array of drugs, steroids, and other xenobiotics, are dependent on interactions with redox and allosteric partner proteins for their localization, stability, catalytic function, and metabolic diversity reactions. Genetic variations may impact such interactions by changing the splicing and/or amino acid sequence, which in turn may impact protein topology, localization, post-translational modifications, and three-dimensional structure. More generally, research on single gene defects and their role in

disease as well as recent large scale sequencing studies suggest that a large number of genetic variations may contribute to disease not only by affecting gene function or expression but also by modulating complex protein interaction networks The aim of this research topic is to bring together researchers working in the area of drug steroid and xenobiotic metabolism who are studying protein protein interactions to describe their recent advances in the field We are aiming for a comprehensive analysis of the subject from different approaches including genetics proteomics transcriptomics structural biology biochemistry and pharmacology Of particular interest are papers dealing with translational research describing the role of novel genetic variations altering protein protein interaction Authors may submit original articles reviews and opinion or hypothesis papers dealing with the role of protein protein interactions in health and disease Potential topics include but are not limited to Role of protein protein interactions in xenobiotic metabolism by cytochrome P450s and other drug metabolism enzymes Role of classical and novel interaction partners for cytochrome P450 dependent metabolism which may include interactions with redox partners interactions with other P450 enzymes to form P450 dimers multimers P450 UGT interactions and proteins involved in posttranslational modification of P450s Effect of genetic variations mutations and polymorphisms on metabolism affected by protein protein interactions Structural implications of mutations and polymorphisms on protein protein interactions Functional characterization of protein protein interactions Analysis of protein protein interaction networks in health and disease Regulatory mechanisms governing metabolic processes based on protein protein interactions Experimental approaches for identification of new protein protein interactions including changes caused by mutations and polymorphisms

*Targeting Protein-Protein Interactions by Small Molecules* Chunquan Sheng, Gunda I. Georg, 2018-06-26 This book comprehensively reviews the state of the art strategies developed for protein protein interaction PPI inhibitors and highlights the success stories in new drug discovery and development Consisting of two parts with twelve chapters it demonstrates the design strategies and case studies of small molecule PPI inhibitors The first part discusses various discovery strategies for small molecule PPI inhibitors such as high throughput screening hot spot based design computational approaches and fragment based design The second part presents recent advances in small molecule inhibitors focusing on clinical candidates and new PPI targets This book has broad appeal and is of significant interest to the pharmaceutical science and medicinal chemistry communities
