Proteus-- Michael S. Loescher,2000 Christ's Return and Today's Global Geopolitical Bombshells Dr. David Liang,2019-05-14 Many people are eager to embrace Nostradamus and the Mayans while dismissing the Holy Bible's prophecies Yet the Bible in Revelation chapter 4 promises Come up here and I will show you what must take place after this Inspired by that promise this principal author has gleaned decades of insight regarding global geopolitical events and what might take place toward the end of this world as we know it In 1989 he predicted in a Chinese magazine the possibility of German unification as an expression of the mixed iron and clay kingdom foreseen in Daniel chapter 2 The same prophecy suggests the intermingling of China with Taiwan and North and South Korea Back in 1989 this principal author also predicted that the U S would withdraw from Europe because the Bible speaks little of the U S's role during Earth's final hour Chapter 1 of this book deals with doomsday end of the world bombshells with reference to notable scientists such as Stephen Hawking Martin Rees Frank Fenne and Isaac Newton Chapters 2 and 3 address the startling role reversal between the U S a former superpower now in retreat from the global scene and a resurgent Russia and the incredible role played by Vladimir Putin in both Russia and the U S Chapter 4 deals with the miraculous rebirth of Israel and the path toward a rebuilt Third Temple Chapter 5 deals with Middle East bombshells particularly the rise of radical Islamic based entities and the Bible's portrait of Babylon Chapter 6 applies the aforementioned iron and clay mixture analogy to the possible unification of China with Taiwan and North and South Korea including bombshell overtures between U S President Trump and North Korean leader Kim Chapter 7 deals with China's ascent and applies a prophecy in Isaiah chapter 49 to the increasing number of Chinese Christians despite communism Chapter 8 situates Brexit Britain exiting the European Union which this principal author foresaw within the Biblical context of a future ten kings coalition and the emergence of the antichrist Finally chapter 9 deals with Christ's own statements of what geopolitical bombshells must take place leading up to his return to Earth The Bible's accuracy in predicting geopolitical events gives us reason to believe in its supernatural authority and thus to believe its ultimate promise that Jesus Christ will return to this world **The Handbook of Technology Foresight** Luke Georghiou,2008-03-31 Cross cutting analytical chapters explore the emergence and positioning of foresight approaches and methods organisational issues policy transfer and evaluation Insights in Microorganisms in Vertebrate Digestive Systems: 2022 Weiqi He,2024-01-19 This Research Topic is part of the Insights in Frontiers in Microbiology series We are now entering the third decade of the 21st Century and especially in the last years the achievements made by scientists in the field of Microbiology have been exceptional leading to major advancements Frontiers has organized a series of Research Topics to highlight the latest advancements in science in order to be at the forefront of science in different fields of research This specific editorial initiative led by Dr Weiqi He is focused on new insights novel developments current challenges latest discoveries recent advances and future perspectives in the field The Research Topic solicits brief forward looking

mediated bacterial antibiotic resistance, vol II Dongchang Sun,Xingmin Sun,Yongfei Hu,Yoshiharu Yamaichi,2023-07-12

Multidrug Gram-Negative Bacilli : Current Situation and Future Perspective Rafael Franco-Cendejas,Elvira Garza González,Rodolfo García-Contreras,Luis Esau Lopez Jacome,2023-11-27 Bacterial resistance has become a worldwide concern since patients with infections related to microorganisms have a higher risk to develop the worst outcomes including death in addition to greater consumption of hospital resources than those patients who become infected with susceptible microorganisms Estimates have been made that if this problem continues increasing in 2050 there will be ten million deaths worldwide more than those currently caused by cancer Gram negative bacilli such as Enterobacterales *Pseudomonas aeruginosa* and *Acinetobacter baumannii* are associated with higher rates of both community and hospital acquired infections

and unfortunately have been showing an alarming increase in the rates of resistance In the last decade the use of antibiotics has resurfaced which in the past were discarded due to their toxicity associated as therapeutic tools for many of these infections meanwhile new therapeutic options have emerged on the market that could be viable for the treatment of these bacterial infections depending on the resistance mechanisms involved *Epidemiology of Antimicrobial Resistance and Virulence Factors of Emerging and Re-emerging bacteria* Rosa Del Carmen Rocha-Gracia, Gerardo Cortés Cortés, Manuel Gerardo Ballesteros Monrreal , Margarita María De La Paz Arenas-Hernandez, Edwin Barrios-Villa, 2025-03-20 Infectious diseases caused by bacteria are one of the most important health problems worldwide This is due to the increase in the prevalence of multidrug resistant bacteria The increased antibiotic resistance in these pathogens may be related to the inadequate use and abuse of antimicrobials in humans as well as in domestic animals or those destined for consumption In addition the virulence characteristics of bacterial pathogens play a transcendental role in the development and persistence of the infectious process and it has been observed that virulence characteristics such as biofilm or cell invasion also influence therapeutic failure Both virulence factors and antibiotic resistance determinants are commonly encoded in mobilizable genetic elements which has favored their dissemination and the emergence of highly virulent and antimicrobial resistant bacterial clinical isolates both of these properties in co occurrence pose a real challenge in the diagnosis management and treatment of an infectious process Molecular factors including repressors operators enhancers and insertion sequences may be involved in the repression and overexpression of genes or gene clusters and may contribute to the expression levels of virulence and resistance genes The Wildlife Gut Microbiome and Its Implication for Conservation Biology Lifeng Zhu, Simon Bahrndorff, Jianjun Wang, 2021-08-19
