Descriptive Complexity of Formal Systems Jeffrey Shallit, Alexander Okhotin, 2015-06-15 This book constitutes the refereed proceedings of the 17th International Conference on Descriptive Complexity of Formal Systems DCFS 2015 held in Waterloo ON Canada in June 2015 The 23 full papers presented together with 2 invited talks were carefully reviewed and selected from 29 submissions The subject of the workshop was descriptive complexity Roughly speaking this field is concerned with the size of objects in various mathematical models of computation such as finite automata pushdown automata and Turing machines Descriptive complexity serves as a theoretical representation of physical realizations such as the engineering complexity of computer software and hardware It also models similar complexity phenomena in other areas of computer science including unconventional computing and bioinformatics **Exploring New Frontiers of Theoretical Informatics** Jean-Jacques Lévy, Ernst W. Mayr, John C. Mitchell, 2006-04-11 In recent years IT application scenarios have evolved in very innovative ways Highly distributed networks have now become a common platform for large scale distributed programming high bandwidth communications are inexpensive and widespread and most of our work tools are equipped with processors enabling us to perform a multitude of tasks In addition mobile computing referring specifically to wireless devices and more broadly to dynamically configured systems has made it possible to exploit interaction in novel

ways To harness the flexibility and power of these rapidly evolving interactive systems there is need of radically new foundational ideas and principles there is need to develop the theoretical foundations required to design these systems and to cope with the many complex issues involved in their construction and there is need to develop effective principles for building and analyzing such systems Reflecting the diverse and wide spectrum of topics and interests within the theoretical computer science community Exploring New Frontiers of Theoretical Informatics is presented in two distinct but interrelated tracks Algorithms Complexity and Models of Computation Logic Semantics Specification and Verification Exploring New Frontiers of Theoretical Informatics contains 46 original and significant contributions addressing these foundational questions as well as 4 papers by outstanding invited speakers These papers were presented at the 3rd IFIP International Conference on Theoretical Computer Science TCS 2004 which was held in conjunction with the 18th World Computer Congress in Toulouse France in August 2004 and sponsored by the International Federation for Information Processing IFIP
