Proximity To Death:

The Effect of Proximity to Death on Long-term Care Use France Marie Priez,2005 The Impact of Death-Related Costs on Health Care Expenditure: A Survey Michele Raitano,2006 Intuition in Medicine Hillel D. Braude,2012-05-22

Intuition is central to discussions about the nature of scientific and philosophical reasoning and what it means to be human. In this bold and timely book Hillel D Braude marshals his dual training as a physician and philosopher to examine the place of intuition in medicine. Rather than defining and using a single concept of intuition philosophical practical or neuroscientific Braude here examines intuition as it occurs at different levels and in different contexts of clinical reasoning. He argues that not only does intuition provide the bridge between medical reasoning and moral reasoning but that it also links the epistemological ontological and ethical foundations of clinical decision making. In presenting his case Braude takes readers on a journey through Aristotle's Ethics highlighting the significance of practical reasoning in relation to theoretical reasoning and the potential bridge between them then through current debates between regulators and clinicians on evidence based medicine and finally applies the philosophical perspectives of Reichenbach Popper and Peirce to analyze the intuitive support for clinical equipoise a key concept in research ethics. Through his phenomenological study of intuition Braude aims to demonstrate that ethical responsibility for the other lies at the heart of clinical judgment. Braude's original approach advances medical ethics by using philosophical rigor and history to analyze the tacit underpinnings of clinical reasoning and to introduce clear conceptual distinctions that simultaneously affirm and exacerbate the tension between ethical theory and practice. His study will be welcomed not only by philosophers but also by clinicians eager to justify how they use moral intuitions and anyone interested in medical decision making.

The LSE Companion to Health Policy covers a wide range of conceptual and practical issues from a number of different perspectives introducing the reader to and summarising the vast literature that analyses the complexities of health policy the Companion also assesses the current state of the art. Health policy is a wide ranging subject covering many academic disciplines but what most studies in health policy have in common is an interest in applying theory to improve practice. This Companion brings academic rigour to bear evidence on a range of central areas within health policy. It covers key issues on the quality access and inequalities in health and health care supply and health markets insurance and expenditures pharmaceuticals and new technologies and aging and long term care. This unique Companion on health policy contains the most important features for health system reform at a time of funding constraints and will therefore hold great appeal for policy analysts and makers students academics and management professionals.

Ageing, Care Need and Quality of Life Gabriele Doblhammer,Rembrandt Scholz,2010-05-28

Steadily increasing life expectancy is one of the great

achievements of industrialised societies over the last century Life expectancy has not only been growing among the young and those reaching retirement age but also especially in recent decades among people ages 80 and above These improvements in life expectancy have led to the emergence of the so called third age when people retire but are still young, healthy and able to participate in society Nevertheless closer to the end of life a fourth age of decrepitude and dependence on others has to be anticipated despite the postponement of functional limitations and severe disabilities into higher ages the debate continues over whether the additional years gained are healthy years or years with severe care need particularly among the oldest old the fastest growing segment of the population Future improvements in life expectancy and the health status of the elderly will determine the need for care in the future While different assumptions about these trends based on expert opinion or the extrapolation of past experiences can be made there will always be a degree of uncertainty about future trends A third important factor driving the extent of future care need is however already determined by the history of the past century and is embedded in the age structures of our populations *The Production of Lateness* Rahel Rivera

Godoy-Benesch, 2020-05-11 This study examines how selected authors of the late 20th and early 21st centuries write about their creative processes in old age and thus purposefully produce a late style of their own Late life creativity has not always been viewed favourably Prevalent peak and decline models suggest that artists as they grow old cease to produce high quality work Aiming to counter such ageist discourses the present study proposes a new ethics of reading literary texts by elderly authors For this purpose it develops a methodology that consolidates textual analysis with cultural gerontology Proximity to Death and Physicians' Attitudinal Disposition Toward Patients and Their Families John R. Cancer and the Fear of Death Norman Straker, 2012-12-27 In *Facing Cancer and the Fear of Death* A Psychoanalytic Perspective on Treatment Dr Norman Straker proposes that death anxiety is responsible for the American society's failure to address costly futile care at the end of life more specifically doctors default on the appropriate prescription of palliative care because of this anxiety This leads to unnecessary suffering for terminally ill patients and their families and significant distress for physicians To address these challenges in the culture of medical education increased psychological support for physicians who treat dying patients is necessary Additionally physicians need to reach a consensus regarding the discontinuation of active treatments Psychoanalysts have traditionally denied the importance of death anxiety and report relatively few treatment cases of dying patients in their literature This book offers multiple treatment reports by psychoanalysts that illustrate the effectiveness and value of a flexible approach to patients facing death The psychoanalytic reader is expected to gain a greater level of comfort with facing death and is encouraged to consider making themselves more available to the ever increasing population of cancer survivors Further psychoanalysts are encouraged to be more useful partners to the oncologists that are burdened by the irrational feelings of all parties *Death Activism* Patricia MacCormack, 2025-02-06 Traditional Western attitudes towards death deal with it as a painful inevitability something that

has to be navigated as a trauma and a taboo They focus essentially on the management of death an anthropocentric practice prioritising the human life above every other type of existence Patricia MacCormack explores how we can develop a death activism a variety of tactics and posthuman practices which celebrate death its inevitability its forms from the slow to times of crisis and how trauma and mourning emerge as their own forms of expression Crucial to the foundation of death activism is the dissymmetry with which different deaths are met including the mass death of nonhuman animals and ecologies Death Activism is a feminist queer postcolonialist enquiry that seeks to queer death making queer our usual familiar death habits and trajectories of thought toward a jubilant activism that can transform death into a more democratically equal and a more jubilant force for life *Proximity Levinas, Blanchot, Bataille and Communication* Joseph Libertson, 2012-12-06 The problematic reality of an alterity implicit in the concept of communication has been a consistent attestation in formal discourse The rapport of thought to this alterity has been consistently described as a radical inadequation By virtue of the communicational economy which produces discontinuity and relation illumination and the possibility of consciousness an opacity haunts the familiarity of comprehension Consciousness spontaneity is limited by the difference or discontinuity of the exterior thing of the exterior subject or intersubjective other and of the generality of existence in its excess over comprehension's closure An element implicit in difference or discontinuity escapes the power of comprehension and even the possibility of manifestation Within the system of tendencies and predications which characterizes formal discourse however this escape of alterity is most often understood as an escape which proceeds from its own substantiality the unknowable in itself of things of subjects and of generality Alterity escapes the power of comprehension on the basis of its power to escape this power That which escapes the effectivity of consciousness escapes on the basis of its own effectivity For this reason the rapport of inadequation described by the escape may function in formal discourse as a correlation The inadequation of comprehension and exteriority may function as the vicissitude of a larger adequation The latent principles of this adequation are power and totalization **Attachment in Adulthood, Second Edition** Mario Mikulincer, Phillip R. Shaver, 2017-10-13 This volume shows how attachment theory which initially focused on child development is now being used to elucidate social functioning across the lifespan Attachment in Adulthood Mario Mikulincer, Phillip R. Aging, Proximity to Death, and Religiousness Marie Lechler,Uwe Sunde,2020 Considerable evidence has documented that the elderly are more religious and that religiousness is associated with better health and lower mortality Yet little is known about the reverse role of life expectancy or proximity to death as opposed to age for religiousness This paper provides evidence for the distinct role of expected remaining life years for the importance of religion in individuals lives We combine individual survey response data for more than 311 000 individuals from 95 countries over the period 1994 2014 with information from period life tables Contrary to wide held beliefs religiousness decreases with greater expected proximity to death The findings have important implications regarding the consequences of population aging for religiousness and associated outcomes

The Mystery of Death Ladislaus Boros,2020-04-21 What precisely happens at the time of death is a question that theologians have struggled over for centuries but have never answered satisfactorily The response to this question that Ladislaus Boros gives in his monumental synthesis *The Mystery of Death* is that in death we meet Christ fully for the first time and in doing so attain to full consciousness and freedom It is therefore only in the moment of death than humans are able to elect for or against their eternal salvation In other words death is a kind of judgment day but it is we ourselves who pass judgment on ourselves In her introduction and commentary Cynthia Bourgeault argues passionately that Ladislaus Boros represents a necessary link to understanding the radical theology of Teilhard de Chardin She presents Boros as a powerful potential bridgebuilder Standing firmly on the shoulders of his celebrated Jesuit mentor Karl Rahner and highly skilled in the scholastic discourse that Teilhard himself eschewed he is able to mediate an illuminating dialogue between Teilhard and the greater Christian theological tradition not as is so often the case in so much of contemporary Teilhardian scholarship by secularizing Teilhard s thought or draping it in current evolutionary jargon but by piercing to the very marrow of Teilhard s Christic mysticism and carrying it to an even more brilliant degree of spiritual luminosity
