

PSYCHIATRIC ASPECTS OF MENTAL RETARDATION REVIEWS

"... when evaluating a mentally retarded emotionally disturbed individual, it is particularly important that the mental health clinician be able to "see past" the non-specific effects produced by developmental disabilities and recognize the presence of illness specific symptoms and behavior."

Vol. 5, No. 9, September, 1986

Four Factors Affecting the Diagnosis of Psychiatric Disorders in Mentally Retarded Persons

Robert Sovner, M.D.
Anne DesNoyers Hurley, Ph.D.

One of the most difficult and important tasks to accomplish when evaluating mentally retarded persons who have emotional disorders is to differentiate diagnostically relevant from other forms of maladaptive behavior. For example, some retarded persons are diagnosed as suffering from schizophrenia or schizoaffective disorder because they appear to be disorganized and "out of control." As result of this diagnosis, they are likely to be treated with antipsychotic drug therapy. Such a clinical presentation is also consistent with an affective illness, however, or even with a transient reaction due to acute stress. If such non-specific disorganization is mistaken for a psychotic process, improper treatment and potentially serious adverse reactions (e.g., tardive dyskinesia) can be the result.

Many maladaptive behaviors which develop in mentally retarded persons are in fact nonspecific effects of developmental disabilities such as impaired communication skills. The *Diagnostic and Statistical Manual of Mental Disorders, Third Edition (DSM-III)* (4) does not take these effects into account, however, since it was designed to be used with mentally ill persons of normal psychosocial development. As a result, it is very difficult to use the *DSM-III* to diagnose psychiatric disorders in the mentally retarded.

Therefore, when evaluating a mentally retarded-emotionally disturbed individual, it is particularly important that the mental health clinician be able to "see past" the nonspecific effects produced by developmental disabilities and recognize the presence of illness specific symptoms and behavior (e.g., dysphoric mood in major depression).

Four Pathoplastic Factors

The term "pathoplastic" refers to the distorting effects of personality and intelligence upon the presentation of psychiatric disorders. In this article, we shall describe four pathoplastic factors which affect the diagnostic process when working with mentally retarded persons (16). The degree to which these factors modify the symptoms of psychiatric illness greatly depends on the severity of the developmental disabilities. The more severe the impairments, the greater their influence.

1) Intellectual Distortion

Intellectual distortion refers to the effects of the mentally retarded person's diminished ability to think abstractly and communicate intelligibly (2). Deficits in the ability to observe and describe one's own behavior and feelings severely hamper an individual's ability to report experiences which are consistent with a specific psychiatric disorder (e.g., suicidal thoughts which are a characteristic feature of major depression).

Mentally retarded persons may have any combination of speech impediments, limited vocabulary, concrete thinking, hearing deficits, and receptive and expressive aphasia, or they may completely lack any language function. Such disabilities make it especially difficult to diagnose psychotic disorders in clients with an IQ below 50, because they lack the communication skills necessary to describe hallucinations and delusions (2,5,13).

Comprehensive Handbook of Psychopathology Henry E. Adams,2013-12-18 The major purpose of this handbook is to provide a comprehensive review of current clinical descriptions research and theories of psychopathology Descriptive psychopathology is a field that is the foundation of clinical practice and research in clinical psychology psychiatry psychiatric social work psychiatric nursing and allied professions in mental health Psychopathology is often perceived as a stepchild of the more glamorous areas of diagnosis or assessment and therapy or behavioral change Nevertheless it is doubtful that any meaningful advancements in these areas will occur until there is a thorough understanding of the behavioral disorders The purpose of the present project was to devise a handbook that covered both general and specific topics in psychopathology and that would be useful to researchers practitioners and graduate or other advanced students in the mental health professions In order to implement this plan we selected very carefully colleagues whom we respect for their expertise in particular fields These include both clinicians and researchers with outstanding national reputations as well as more junior behavioral scientists and clinicians who in our opinion will achieve similar recognition in the future The chapters in this book lead us to believe that we have chosen wisely We would like to express our appreciation to these authors for their outstanding contributions and cooperation
