Modified Maxwell Equations in Quantum Electrodynamics Henning F. Harmuth, Terence William Barrett, Beate Meffert, 2001 Divergencies in quantum field theory referred to as OC infinite zero point energy OCO have been a problem for 70 years Renormalization has always been considered an unsatisfactory remedy In 1985 it was found that Maxwell's equations generally do not have solutions that satisfy the causality law An additional term for magnetic dipole currents

corrected this shortcoming Rotating magnetic dipoles produce magnetic dipole currents just as rotating electric dipoles in a material like barium titanate produce electric dipole currents Electric dipole currents were always part of Maxwell's equations This book shows that the correction of Maxwell's equations eliminates the infinite zero point energy in quantum electrodynamics In addition it presents many more new results Contents Monopole Dipole and Multipole Currents Hamiltonian Formalism Quantization of the Pure Radiation Field Klein-Dirac-Gordon Equation and Vacuum Constants Readership Senior undergraduates graduate students researchers and academics in quantum atomic theoretical mathematical and nuclear physics Advances in Imaging and Electron Physics Henning Harmuth, Beate

Meffert, 2009-06-12 In this volume the authors extend the calculus of finite differences to Dirac's equation They obtain solutions for particles with negative mass that are completely equivalent to the solutions with positive mass In addition they obtain solutions for nuclear distances of the order of 10^{-13}m and less rather than for the usual atomic distances They report a number of other deviations from the differential theory for instance they found a slight deviation in the eigenvalues of an electron in a Coulomb field similar to the Lamb shift In two sections some surprising results are shown for the concept of space caused by the replacement of dx by δx **Microwave Theory and Techniques** Mr. Rohit Manglik, 2024-01-24
