Presidential Campaigning in the Internet Age Jennifer Stromer-Galley, 2019 As the plugged-in presidential campaign has arguably reached maturity, *Presidential Campaigning in the Internet Age* challenges popular claims about the democratizing effect of Digital Communication Technologies (DCTs). Analyzing campaign strategies, structures, and tactics from the past six

presidential election cycles Stromer Galley reveals how for all their vaunted inclusivity and tantalizing promise of increased two way communication between candidates and the individuals who support them DCTs have done little to change the fundamental dynamics of campaigns The expansion of new technologies has presented candidates with greater opportunities to micro target potential voters cheaper and easier ways to raise money and faster and more innovative ways to respond to opponents The need for communication control and management however has made campaigns slow and loathe to experiment with truly interactive internet communication technologies Citizen involvement in the campaign historically has been and as this book shows continues to be a means to an end winning the election for the candidate For all the proliferation of apps to download polls to click videos to watch and messages to forward the decidedly undemocratic view of controlled interactivity is how most campaigns continue to operate In the fully revised second edition Presidential Campaigning in the Internet Age examines election cycles from 1996 when the World Wide Web was first used for presidential campaigning through 2016 when campaigns had the full power of advertising on social media sites As the book charts changes in internet communication technologies it shows how even as campaigns have moved from a mass mediated to a networked paradigm the possibilities these shifts in interactivity seem to promise for citizen input and empowerment remain farther than a click away

*Crime in the Digital Age* Russell Smith, 2018-02-06 Willie Sutton a notorious American bank robber of fifty years ago was once asked why he persisted in robbing banks Because that s where the money is he is said to have replied The theory that crime follows opportunity has become established wisdom in criminology opportunity reduction has become one of the fundamental principles of crime prevention The enormous benefits of telecommunications are not without cost It could be argued that this quotation from *Crime in the Digital Age* is a dramatic understatement Grabosky and Smith advise us that the criminal opportunities which accompany these newest technological changes include illegal interception of telecommunications electronic vandalism and terrorism theft of telecommunications services telecommunications piracy transmission of pornographic and other offensive material telemarketing fraud electronic funds transfer crime electronic money laundering and finally telecommunications in furtherance of other criminal conspiracies However although digitization has facilitated a great deal of criminal activity the authors suggest that technology also provides the means to prevent and detect such crimes Moreover the varied nature of these crimes defies a single policy solution Grabosky and Smith take us through this electronic minefield and discuss the issues facing Australia as well as the international community and law enforcement agencies
