Jauss,2008-11-06 Medical care and biomedical research are rapidly becoming global Ethical questions that once arose only in the narrow context of the physician patient relationship in relatively prosperous societies are now being raised across societies cultures and continents For example what should be the standard of care for clinical trials of medical innovations in poorer countries Are researchers obligated to compare new therapies or drugs with the best known ones available or can they use as a benchmark the actual treatments or lack of treatments available to poor people Should pharmaceutical companies seeking to lower the costs of new drug trials be allowed to enrol citizens of less developed countries in them even when those individuals cannot afford and will not be eligible for the resulting drugs More generally should the norms of medicine and research be the same across cultures or can they adapt to local social economic or religious conditions Global Bioethics gathers some of the world s leading bioethicists to explore many of the new questions raised by the globalization of medical care and biomedical research Among the topics covered are the impact of globalization on the norms of medical ethics the conduct of international research the ethics of international collaborations challenges to medical professionalism in the international setting and the relation of religion to global bioethics *Key Issues in Bioethics* Ralph Levinson,Michael

Towards Neurobioethics Darlei Dall'Agnol, 2020-09-02 From time to time a particular science achieves such great success that people are tempted to elevate it to the condition of prima philosophia and then to try to explain everything else from its perspective Thus physics becomes physicalism history becomes historicism and so on Nowadays the big science is the investigation of the nervous system particularly the brain The new paradigm is then given by neuroscience and everything else seems to require its prefix neuroeconomy neuroeducation neurolaw neurotechnology neuroethics and neuropolitics among others However what does it really mean to use neuro as a prefix to a word as it appears in the title of this book To answer this question this work develops a metaethical theory namely practical cognitivism and the new normative concept of caring respect in order to examine the ethics of neuroscientific investigations and their associated neurotechnologies including for example the moral problems of cognitive enhancement using nootropics
