As Gods Matthew Cobb, 2022-11-15 The thrilling and terrifying history of genetic engineering In 2018 scientists manipulated the DNA of human babies for the first time As biologist and historian Matthew Cobb shows in *As Gods* this achievement was one many scientists have feared from the start of the genetic age Four times in the last fifty years geneticists frightened by their own technology have called a temporary halt to their experiments They ought to be frightened Now we have powers that can target the extinction of pests change our own genes or create dangerous new versions of diseases in an attempt to prevent future pandemics Both awe inspiring and chilling *As Gods* traces the history of genetic engineering showing that this revolutionary technology is far too important to be left to the scientists They have the power to change life itself but should we trust them to keep their ingenuity from producing a hellish reality

Biotechnology Steven P. McGiffen, 2005-03-20 Frankenfoods designer babies Dolly the Sheep and Raelian fantasists few subjects generate as much controversy and misinformation as biotechnology This book takes the reader behind the headlines to examine the new laws on genetic based technologies who's making them and why Steven P McGiffen offers a lucid analysis

of the real implications of biotechnology legislation in the US and the EU and contrasts it with approaches to agricultural and medical biotech in the rest of the world He argues that the EU and America are removing decision making power from the people and their elected representatives Biotechnology regulation is a local manifestation of a global process of transferring power from the people to corporations from poor countries to rich ones from the public to the private He shows that biotechnology demands effective and democratic international decision making procedures and that we are very far from achieving them This is an indispensable guide for activists and anyone who wants to know more about how to control biotech regulation and how to resist handing control of our future to corporations **Brenner's Encyclopedia of Genetics** Stanley

Reordering Life Stephen Hilgartner, 2017-05-19 How the regimes governing biological research changed during the genomics revolution focusing on the Human Genome Project The rise of genomics engendered intense struggle over the control of knowledge In Reordering Life Stephen Hilgartner examines the genomics revolution and develops a novel approach to studying the dynamics of change in knowledge and control Hilgartner focuses on the Human Genome Project HGP the symbolic and scientific centerpiece of the emerging field showing how problems of governance arose in concert with new knowledge and technology Using a theoretical framework that analyzes knowledge control regimes Hilgartner

investigates change in how control was secured contested allocated resisted justified and reshaped as biological knowledge was transformed Beyond illuminating genomics Reordering Life sheds new light on broader issues about secrecy and openness in science data access and ownership and the politics of research communities Drawing on real time interviews and observations made during the HGP Reordering Life describes the sociotechnical challenges and contentious issues that the genomics community faced throughout the project Hilgartner analyzes how laboratories control access to data biomaterials plans preliminary results and rumors compares conflicting visions of how to impose coordinating mechanisms examines the repeated destabilization and restabilization of the regimes governing genome databases and examines the fierce competition between the publicly funded HGP and the private company Celera Genomics The result is at once a path breaking study of a self consciously revolutionary science and a provocative analysis of how knowledge and control are reconfigured during transformative scientific change

Killer Instinct Nadine Weidman,2021-10-26 In the 1960s biologists and social scientists engaged in a public debate about human nature The question whether humans are innately aggressive or cooperative eventually receded but the oppositional nature nurture binary created in the course of the debate left a lasting legacy that would underpin subsequent discussions of human behavior Science and Technology in Society Soraya Boudia,Ashveen Peerbaye,2025-06-17 Science and technology profoundly shape the world today Over the last two centuries they have become powerful engines of change accounting for some of the most important forms of human activity inseparable from social political and economic life Analyzing their modes of production the dynamics of their dissemination the different forms of their use and opposition to them is a major academic and political challenge Science and Technology in Society offers a broad overview of work carried out in France in the international multi disciplinary field of Science and Technology Studies STS and is the product of a collaboration between some thirty authors It aims to provide an introduction to this field of research its development benefits and the new perspectives that are emerging This book presents and discusses studies that are still little known in France even though paradoxically many researchers from French institutions make decisive contributions to international work in this field

Through the Mirrors of Science Francesco Coniglione,2013-05-02 Is the objective that the European Union set itself in 2000 that is to be the most competitive knowledge based society and economy by 2010 still realistic The momentous year has arrived but it is discouraging to note that very few steps have been made in the direction that was fixed What has gone wrong Were the philosophical epistemological and economic conditions adequate to achieve the desired result This book the result of a research project commissioned by the European Commission critically investigates the society of knowledge and the way in which the European Union has proceeded towards it examining first of all the premises and the contributions that the disciplines of Science and Technological Studies can provide In this way we have proposed innovative theoretical and epistemological bases for a multidisciplinary approach making use of the Modelling Approach to Science and therefore insisting on the

function that human sciences can have for a society of knowledge that hinges not so much on an industrialist scenario but a humanist one that eschews hyper specialization and instead privileges creativity flexibility imagination and innovation economy
