Microsurgery Of Cerebral Veins:

Microsurgery of Cerebral Veins W. Seeger, 2012-12-06 A description of cerebral veins under operative versely where there are large arterial vessel stems at the base of the brain the veins somewhat lose their technical aspects is practically a description of opera significance They become important again in the tive approaches and their obstruction by cerebral region of the basal Dura the Tentorium and the Falx veins It is this which constitutes the major difference but with the exception of the region of the Sinus between arteries and veins The arteries of the brain originate from only four large vessel stems which cavernosus away from the large arterial stems This justifies writing a microneurosurgical textbook exclu bridge the CSF space and then run along the surface sively under the aspect of the cerebral veins of the brain or inside the brain Arterial vessels hardly interfere with operative approaches even in the deep That we know so much about cerebral veins is due CSF spaces such as the Sylvian fissure the Tentorium primarily to the work of neuroradiologists It is not fissure and the ventricle system Veins on the other the objective of the present volume to provide a hand can appear in almost every location of the brain compreherisive and comparative survey of the large as so called bridging veins They are extremely vari number of individual results of attempts at establish able and can bloc the approach to deep CSF spaces ing vein types

Microsurgery of Cerebral Veins Wolfgang Seeger, 1984-01-01 **Differential Approaches in Microsurgery of the Brain** W. Seeger, 2012-12-06 Preface In the present volume various approaches to the same in relation to the surrounding brain structures and target area in the deep regions of the brain are cerebral vessels Here it is to be noted that the so described In the previous volumes this aspect was called quadrigeminal region consists not only of the taken little into account The author endeavored to Cisterna tecti but the nearby fissures Fissura trans describe particularly the typical operative approaches versa cerebri and Fissura horizontalis cere belli and their principles to make it easier for the beginner should also be included The pathological processes to learn the microsurgical techniques in interventions do not generally confine themselves to the Cisterna in the central nervous system tecti but extend over the neighboring fissures The Now problematical processes in the immediate vicini Cisterna tecti extends without limits into the neigh ty of the brainstem area have been exclusively boring fissures and into the Cisterna ambiens selected They have been separated into dorsal later As previously besides personal operational experi ences which are not marked as such also interven al and ventral processes with locations mainly in the dorsal lateral or ventral cisternal areas Each of tions are presented which have been carried out by these three groups has been separated again into co workers *Planning Strategies of Intracranial Microsurgery* W. Seeger, 2012-12-06 In the previous volume Differential Approaches in if approach is hindered through such variants or if the lesion itself has a close relationship to impor Microsurgery of the Brain the particularly prob lematical operations in the depth of the brain around tant vessels for example if arteries penetrate or the brainstem were covered Even more than in other are just adjacent to a meningioma operations on the brain it was important here to decide before the operation which

from several positions. On the basis of this method it was obvious to first sensible approaches would be chosen. Therefore in this present the description of the veins and then to compare the volume it was obvious to try to describe the arteries and not to choose the direction of microsurgical operations of the brain primarily under the blood flow in the image analysis as is usually the aspect of preoperative planning. This is done by done. Only then can one judge which problems might present the usual daily preliminary discussions be encountered. Certainly only a part of the suspected which have taken place in the Freiburg Clinic for the problems will show up during the operation. How last ten years. On the day before surgery these ever in view of the great number of possible difficult discussions are always carried out according to the ties one should also be prepared for rare complications same principles.

The Microsurgical Approaches to the Target Areas of the Brain Wolfgang Seeger, 2012-12-06. Preface. Drawings and scripts were selected from those of the operative routes and their alternatives which were produced by the author in the last for well defined anatomical target areas alone. This three years to help educate young neurosurgeons viewpoint becomes more and more important be in Freiburg and in other clinics cause today there is no anatomical structure of the brain which cannot be approached with a minimal steps risk for surviving the operation. But more and more. Learning techniques for performing of trepanation the risk for neurological or psychological postoperations from opening of the skin onto dura incision. tive complications will rise if the anatomical and step 1 neurophysiological knowledge is insufficient. These Learning of techniques for routine operations viewpoints are most important in operations at the e.g. for extirpation of gliomas of cerebral lobes, cranial base and operations transcending midline, step 2 structures of the brain. An intensive anatomical Learning of techniques for operative approaches training helps to understand MRI before operation in problematic areas of the cranial and cerebral base. Often the modern MRI demonstrates more base and of the midline especially for the often anatomical details than the unexperienced neurosurgeon performed operations e.g. for basal meningioma has understood.

New Trends of Surgery for Cerebral Stroke and its Perioperative Management Yasuhiro Yonekawa, Yoshiharu Sakurai, Emanuela Keller, Tetsuya Tsukahara, 2005-10-18. In July 2004 specialists in neurosurgery, neuroradiology, neurology and neurointensive care discussed recent trends at the 2nd Swiss Japanese Joint Conference on Cerebral Stroke Surgery held in Zurich, Switzerland. New concepts were worked out during the conference and are published in this volume. The book starts with the topic intracranial aneurysms discussing microsurgical and endovascular treatment modalities as well as new surgical approaches. Further chapters deal with the management of unruptured aneurysms and with subarachnoid hemorrhage. Practical guidelines for vasospasm treatment are given. Together with contributions about arteriovenous malformations and fistulas, cerebral revascularization techniques and surgery related to the intracranial venous system, a comprehensive overview about stroke surgery is given with an interdisciplinary approach. The book will be of interest for all specialists involved in therapy of cerebrovascular disease.

Microsurgery of Intracranial Tumors Wolfgang Seeger, 2012-12-06. Preoperative Magnetic Resonance Imaging allows now a better analysis

of the relationship between intracranial tumors and the surrounding brain tissue Even very small deepseated tumors can be identified during the operation by intraoperative ultrasound These technological advances have had a great influence on indications planning strategies and microsurgical techniques The author shows the functional anatomy of the brain with the eye and the mind of a microsurgeon and demonstrates well known topographical relationships under the aspect of an utmost gentle operative approach

Microsurgery of the Brain W. Seeger, 2013-06-29 This book is a sequel to my Atlas of Topography of the Brain and Surrounding Structures Like the first volume it is addressed mainly to neurosurgeons, neurologists and neuroticians of operations provided important stimuli The pathologists Although the two books deal with different conversations held with my colleagues were also important for the production of this Atlas I am particularly grateful to Dr J Gilsbach Dr H R Egner neurosurgical techniques this book will also be of great help to Dr E Grobner for valuable suggestions Special thanks are also due to Doz Dr Ch Oster interest not only to the neurosurgeons but to workers in allied fields as well The book has been tagged for his help with the evaluation of the computer designed to give the neuroradiologist and tomograms Professor F Munding provided a closer insight into the computer tomograms from his Department Stereotaxy and Nuclear Medicine Thanks to my collaboration with Dr H H Riemschneider Specialist for imaging under high magnification and to assist them in Radiology Karlsruhe from whom I obtained several making an accurate diagnosis and in determining computer tomograms

Strategies of Microsurgery in Problematic Brain Areas Wolfgang Seeger, 2012-12-06 Preface Depiction of the NMR slices in three levels The book is completed with selected technical tricks in ganglia brainstem and problematic areas of the cerebellum and operation cases text as well as in the areas of limbic system Special appreciation is due to Prof Dr B Volk Thus the planning of an operation has become widely Director of the Institute of Neuropathology of the University of Freiburg for his advice and help Anatomical fundamentals is therefore indispensable and For nearly all MRI findings I have to thank the colleagues of the Institute of Radiology Director The last two volumes Anatomical Dissections for Prof Dr W Wenz especially Dr Dorothea Ott Use in Neurosurgery Vol 1 and 2 supply the morphological base for this book The book itself is a thank Dr R Fiermaier neuroradiologist in Freiburg continuation of Planning Strategies of Intracranial for several MRI and CT findings Microsurgery Most of the CTs were made in the stereotactic department Some very problematic operations were carried out by my co-worker Priv Doz Dr Eggert who is now retired I want to thank in particular Dr M Mohadjer

Anatomical Dissections for Use in Neurosurgery Wolfgang Seeger, 2012-12-06 This book is published in two volumes Velum medullare

posterior in the area of the 4th In this first volume an attempt is made to give young ventricle including the choroid point of the PICA neurosurgeons methodical instruction in the dissection can be studied exactly These examples were chosen from formaldehyde preserved brains This book because exact topographical knowledge of these vessels however is not intended to be taken as a textbook on itself rich structure is often inadequate and when using modern operative techniques increasingly more of anatomy Conventional presentations of the anatomy of the brain must present step by step the individual operations are performed in just these particular areas systems of the organ according to its developmental These dissections compose the content of the first and functional aspects e.g. cortex limbic system volume basal ganglia brainstem and cerebellum Because The second volume is intended for experienced during a single operation the neurosurgeon is some neurosurgeons who perform complex operations deep times confronted with all the various systems it is inside the brain Some of these operations have been necessary to perform brain dissections from the view come standardized e.g. the opening of the Sylvian point of operative approaches Therefore in this fissure with operations in the area of the Insula and work the attempt is made to keep certain individual cranial base Other complex operations are per surface structures e.g. the Gyrus praecentralis intact formed seldom even today e.g. approaches to the until the end of the dissection so that the relative 3rd ventricle Velum interpositum lateral ventricle topographical positions of surface and deep structures Cisterna tecti Lobulus quadrangularis cerebelli to can be made discernable For these reasons it is named just a few Before such operations it is advisable to view the surface structures of the brain in able the author still does so occasionally to orientate relationship to the skull but then to start with oneself on a formaldehyde preserved brain It is moving the blood vessels and leptomeninges so that in shown how on a formaldehyde preserved brain even this way the skeletonized organ is dissected step by step though it does not provide the real conditions of a live step because in the preserved vascular system the brain under the operative microscope the most important structures are only partially recognizable and thus important topographical relationships can be recognized confusing For this dissection two organs are needed In the first dissection the cerebrum and cerebellum Both volumes are the result of a one year dissection are studied These the young neurosurgeon should course for colleagues meeting twice a week in our have become familiar during his initial training in the clinic
