### **Questions in Daily Urologic Practice**

Ryoichi Oyasu, Ximing J. Yang, Osamu Yoshida, 2009-02-21 The principal role of the diagnostic surgical pathologist is to serve a patient by assisting the clinician in charge of the patient s care In that capacity the pathologist provides the vital information that should be directly and indirectly useful in guiding the clinician toward the most appropriate therapy The material pathologists receive most commonly is a biopsy or a part of an organ removed after a definitive procedure To extract useful information pathological evaluation proceeds according to a set of guidelines Simply reporting a diagnosis of cancer is inadequate Detailed additional information is needed so that the clinician can go on to establish a therapeutic plan as needed To best serve the patient close interaction between the clinician and the pathologist is vital In the field of urological pathology there are problems specific to this system Typically in the prostate because of its location there is little room for a surgeon to work to obtain adequate resection margins unlike with many other organs As a result questions arise such as What constitutes an adequate surgical margin What is the significance of extraprostatic extension of neoplasm that is still inside the resection margin and What is the significance of neoplastic glands found on the resection margin marked with the ink It has been shown that a prostate needle core biopsy can generate much information that is immediately useful in predicting the extent of cancer in the prostate and consequently the outcome for the patient
