Pattern Classification:

Pattern Classification Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field. Now with the second edition, readers will find information on key new topics such as neural networks and statistical pattern recognition, the theory of machine learning and the theory of invariances. Also included are worked examples, comparisons between different methods, extensive graphics, expanded exercises, and computer project topics. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

Soft Computing Approach to Pattern Classification and Object Recognition Kumar S. Ray, 2012-10-05 Soft Computing Approach to Pattern Classification and Object Recognition establishes an innovative unified approach to supervised pattern classification and model-based occluded object recognition. The book also surveys various soft computing tools: fuzzy relational calculus, FRC, genetic algorithm, GA, and multilayer perceptron, MLP, to provide a strong foundation for the reader. The supervised approach to pattern classification and model-based approach to occluded object recognition are treated in one framework, one based on either a conventional interpretation or a new interpretation of multidimensional fuzzy implication, MFI, and a novel notion of fuzzy pattern vector, FPV. By combining practice and theory, a completely independent design methodology was developed in conjunction with this supervised approach on a unified framework and then tested thoroughly against both synthetic and real-life data. In the field of soft computing, such an application-oriented design study is unique in nature. The monograph essentially mimics the cognitive process of human decision making and carries a message of perceptual integrity in representational diversity. Soft Computing Approach to Pattern Classification and Object Recognition is intended for researchers in the area of pattern classification and computer vision. Other academics and practitioners will also find the book valuable.

Pattern Classification Shigeo Abe, 2012-12-06 Neural networks have a learning capability, but analysis of a trained network is difficult. On the other hand, extraction of fuzzy rules is difficult, but once they have been extracted, it is relatively easy to analyze the fuzzy system. This book solves the above problems by developing new learning paradigms and architectures for neural networks and fuzzy systems. The book consists of two parts: Pattern Classification and Function Approximation. In the first part, based on the synthesis principle of the neural network classifier, a new learning paradigm is discussed, and classification performance and training time of the new paradigm for several real-world data sets are compared with those of the widely used back-propagation algorithm. Fuzzy classifiers of different architectures based on fuzzy rules can be defined with hyperbox, polyhedral, or ellipsoidal regions. The book discusses the unified approach for training these fuzzy classifiers. The performance of the newly developed fuzzy classifiers and the conventional classifiers such as nearest neighbor classifiers and support vector machines are evaluated using several real-world data sets, and their advantages and disadvantages are clarified. In the second part, Function Approximation is discussed, extending the discussions in the first part. Performance of the function approximators is compared

This book is aimed primarily at researchers and practitioners in the field of artificial intelligence and neural networks
