Patterns and Processes in the History of Life D.

Jablonski, D.M. Raup, 2012-12-06 Hypothesis testing is not a straightforward matter in the fossil record and here too interactions with biology can be extremely profitable. Quite simply, predictions regarding long term consequences of processes observed in living organisms can be tested directly using paleontological data if those living organisms have an adequate fossil record thus avoiding the pitfalls of extrapolative approaches. We hope to see a burgeoning of this interactive effort in the coming years. Framing and testing of hypotheses in paleontological subjects inevitably raises the problem of inferring process from pattern and the consideration and elimination of a broad range of rival hypotheses is an essential procedure here. In a historical science such as paleontology the problem often arises that the events that are of most interest are unique in the history of life. For example, replication of the metazoan radiation at the beginning of the Cambrian is not feasible. However, decomposition of such problems into component hypotheses may at least in part alleviate this difficulty. For example, hypotheses built upon the role of species packing might be tested by comparing evolutionary dynamics both morphological and taxonomic during another global diversification such as the biotic rebound from the end Permian extinction which removed perhaps 95% of the marine species (see Valentine this volume). The subject of extinction and mass extinction in particular has become important in both paleobiology and biology.

An Unnatural History of Religions

Leonardo Ambasciano, 2018-12-27 *An Unnatural History of Religions* examines the origins, development, and critical issues concerning the history of religion and its relationship with science. The book explores the ideological biases, logical fallacies, and unwarranted beliefs that surround the scientific foundations or lack thereof in the academic discipline of the history of religions, positioning them in today's post-truth culture. Leonardo Ambasciano provides the necessary critical background to evaluate the most important theories and working concepts dedicated to the explanation of the historical developments of religion. He covers the most important topics and paradigm shifts in the field such as phenomenology, postmodernism, and cognitive science. These are taken into consideration chronologically, each time with case studies on topics such as shamanism, gender biases, ethnocentrism, and biological evolution. Ambasciano argues that the roots of post-truth may be deep in human biases but that historical justifications change each time, resulting in different combinations. The surprising rise of once fringe beliefs such as conspiracy theories, pseudoscientific claims, and so-called scientific creationism demonstrates the alarming influence that post-truth ideas may exert on both politics and society. Recognising them before they spread anew may be the first step towards a scientifically renewed study of religion.

The Handbook of Historical Linguistics

Brian Joseph, Richard Janda, 2008-04-15 *The Handbook of Historical Linguistics* provides a detailed account of the numerous issues, methods, and results that characterize current work in historical linguistics, the area of linguistics most directly concerned with language change as well as past language states. Contains an extensive introduction that places the study of historical

linguistics in its proper context within linguistics and the historical sciences in general Covers the methodology of historical linguistics and presents sophisticated overviews of the principles governing phonological morphological syntactic and semantic change Includes contributions from the leading specialists in the field *Religion Explained?* Luther H. Martin, Donald Wiebe, 2017-09-21 With contributions from founders of the field including Justin Barrett E Thomas Lawson Robert N McCauley Paschal Boyer Armin Geertz and Harvey Whitehouse as well as from younger scholars from successive stages in the field s development this is an important survey of the first twenty five years of the cognitive science of religion Each chapter provides the author s views on the contributions the cognitive science of religion has made to the academic study of religion as well as any shortcomings in the field and challenges for the future Religion Explained The Cognitive Science of Religion after Twenty five Years calls attention to the field whilst providing an accessible and diverse survey of approaches from key voices as well as offering suggestions for further research within the field This book is essential reading for anyone in religious studies anthropology and the scientific study of religion **The Architecture of Evolution** Marco Tamborini, 2022-12-20 In the final decades of the twentieth century the advent of evolutionary developmental biology evo devo offered a revolutionary new perspective that transformed the classical neo Darwinian gene centered study of evolution In The Architecture of Evolution Marco Tamborini demonstrates how this radical innovation was made possible by the largely forgotten study of morphology Despite the key role morphology played in the development of evolutionary biology since the 1940s the architecture of organisms was excluded from the Modern Evolutionary Synthesis And yet from the beginning of the twentieth century to the 1970s and 80s morphologists sought to understand how organisms were built and how organismal forms could be generated and controlled The generation of organic form was they believed essential to understanding the mechanisms of evolution Tamborini explores how the development of evo devo and the recent organismal turn in biology involved not only the work of morphologists but those outside the biological community with whom they exchanged their data knowledge and practices Together with architects and engineers they worked to establish a mathematical and theoretical basis for the study of organic form as a mode of construction developing and reinterpreting important notions that would play a central role in the development of evolutionary developmental biology in the late 1980s This book sheds light not only on the interdisciplinary basis for many of the key concepts in current developmental biology but also on contributions to the study of organic form outside the English speaking world Patterns and Processes in the History of Life D.M. Natural Selection George C. Williams, 1992-10-01 In this work George C Williams one of evolutionary biology's most distinguished scholars examines the mechanisms and meaning of natural selection in evolution Williams offers his own perspective on modern evolutionary theory including discussions of the gene as the unit of selection clade selection and macroevolution diversity within and among populations stasis and other timely and provocative topics In dealing with the levels of selection controversy he urges a pervasive form of the replicator vehicle distinction Natural selection he argues takes place in the separate domains of information and matter Levels of selection questions consequently require different theoretical devices depending on the domains being discussed In addressing these topics Williams presents a synthesis of his three decades of research and creative thought which have contributed greatly to evolutionary biology in this century

The Importance of Chemical “Speciation” in Environmental Processes M. Bernhard,F.E. Brinckman,P.J. Sadler,2012-12-06 Report the editors replaced the term speciation wherever it occurred by identification and quantification or description of abundance or reactivity or transformation of a chemical species according to whichever one of the four meanings the author had evidently meant to convey In line with the Dahlem Workshop Model this Report comprises the background papers written in advance of the meeting on the current status of problems in environmental research and on advanced analytical techniques for the identification and quantification of chemical species as well as the group reports summarizing the results of the discussions held during the meeting Each group report was prepared during the meeting by one rapporteur with the help of members of that group and finalized by the rapporteur listed as the first author of the group report after the meeting taking into account both verbal comments made during the presentation of the reports in the plenary session at the end of the workshop and written comments received afterwards

Evolutionary Biology: Contemporary and Historical Reflections Upon Core Theory Thomas E. Dickins,Benjamin J.A.

Dickins,2023-03-08 This book is reflecting upon core theories in evolutionary biology in a historical as well as contemporary context It exposes the main areas of interest for discussion but more importantly draws together hypotheses and future research directions The Modern Synthesis MS sometimes referred to as Standard Evolutionary Theory SET in evolutionary biology has been well documented and discussed but was also critically scrutinized over the last decade Researchers from diverse disciplinary backgrounds have claimed that there is a need for an extension to that theory and have called for an Extended Evolutionary Synthesis EES The book starts with an introductory chapter that summarizes the main points of the EES claim and indicates where those points receive treatment later in the book This introduction to the subjects can either serve as an initiation for readers new to the debate or as a guide for those looking to pursue particular lines of enquiry The

following chapters are organized around historical perspectives theoretical and philosophical approaches and the use of specific biological models to inspect core ideas Both empirical and theoretical contributions have been included The majority of chapters are addressing various aspects of the EES position and reflecting upon the MS Some of the chapters take historical perspectives analyzing various details of the MS and EES claims Others offer theoretical and philosophical analyses of the debate or take contemporary findings in biology and discuss those findings and their possible theoretical interpretations All of the chapters draw upon actual biology to make their points This book is written by practicing biologists and behavioral biologists historians and philosophers many of them working in interdisciplinary fields It is a valuable resource for historians and philosophers of biology as well as for biologists Chapters 8 20 22 and 33 are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com

The Tree Habit in Land Plants Volker Mosbrugger, 2006-04-10 The present study will help answer questions of tree type evolution function optimum and tree construction types using the approach of constructional morphology which to date has been widely neglected in palaeobotany and botany First the evolution pattern of the earliest Devonian trees is analyzed and explained including a brief introduction of tree biomechanics Then fossil and recent trees are studied from the viewpoint of constructional morphology with the main emphasis on the trunk as the most characteristic element of a tree The various trunk constructions are classified into functional construction types which are described and analyzed with respect to their biomechanical and biological properties This functional comparison shows that the basic trunk constructions all appear in the Devonian have specific advantages and disadvantages and constrain the possible growth habit of a tree This study based on modern and fossil trees not only leads to a description but also to a causal understanding of the evolution and biology of the various tree types

On the Origin of Autonomy Bernd Rosslenbroich, 2014-04-15 This volume describes features of autonomy and integrates them into the recent discussion of factors in evolution In recent years ideas about major transitions in evolution are undergoing a revolutionary change They include questions about the origin of evolutionary innovation their genetic and epigenetic background the role of the phenotype and of changes in ontogenetic pathways In the present book it is argued that it is likewise necessary to question the properties of these innovations and what was qualitatively generated during the macroevolutionary transitions The author states that a recurring central aspect of macroevolutionary innovations is an increase in individual organismal autonomy whereby it is emancipated from the environment with changes in its capacity for flexibility self regulation and self control of behavior The first chapters define the concept of autonomy and examine its history and its epistemological context Later chapters demonstrate how changes in autonomy took place during the major evolutionary transitions and investigate the generation of organs and physiological systems They synthesize material from various disciplines including zoology comparative physiology morphology molecular biology neurobiology and ethology It is argued that the concept is also relevant for understanding the relation of the biological evolution of man to his cultural
