Welcome to the proceedings of the 2nd International Symposium on Parallel and Distributed Processing and Applications ISPA 2004 which was held in Hong Kong China 13-15 December 2004 With the advance of computer networks and hardware technology parallel and distributed processing has become a key technology which plays an important part in determining future research and development activities in many academic and industrial branches It provides a means to solve computationally intensive

problems by improving processing speed It is also the only able approach to building highly reliable and inherently distributed applications ISPA2004 provided a forum for scientists and engineers in academia and industry to exchange and discuss their experiences new ideas research results and applications about all aspects of parallel and distributed computing There was a very large number of paper submissions 361 from 26 countries and regions including not only Asia and the Pacific but also Europe and North America All submissions were reviewed by at least three program or technical committee members or external reviewers It was extremely difficult to select the presentations for the conference because there were so many excellent and interesting submissions In order to allocate as many papers as possible and keep the high quality of the conference we finally decided to accept 78 regular papers and 38 short papers for oral technical presentations We believe that all of these papers and topics not only provide novel ideas new results work in progress and state of the art techniques in this field but also stimulate the future research activities in the area of parallel and distributed computing with applications

### **Grid Computing: The New Frontier of High Performance Computing**

Lucio Grandinetti, 2005-11-15 The book deals with the most recent technology of distributed computing As Internet continues to grow and provide practical connectivity between users of computers it has become possible to consider use of computing resources which are far apart and connected by Wide Area Networks Instead of using only local computing power it has become practical to access computing resources widely distributed In some cases between different countries in other cases between different continents This idea of using computer power is similar to the well known electric power utility technology Hence the name of this distributed computing technology is the Grid Computing Initially grid computing was used by technologically advanced scientific users They used grid computing to experiment with large scale problems which required high performance computing facilities and collaborative work In the next stage of development the grid computing technology has become effective and economically attractive for large and medium size commercial companies It is expected that eventually the grid computing style of providing computing power will become universal reaching every user in industry and business Written by academic and industrial experts who have developed or used grid computing Many proposed solutions have been tested in real life applications Covers most essential and technically relevant issues in grid computing
