Demonstrating Science with Soap Films Lovett, 2017-11-22 Many of us have been fascinated as children by soap bubbles and soap films Their shapes and colours are beautiful and they are great fun to play with With no less intensity scientists and mathematicians have been interested in the properties of bubbles and films throughout scientific history In this book David Lovett describes the properties of soap films and soap bubbles He then uses their properties to

illustrate and elucidate a wide range of physical principles and scientific phenomena in a way that unifies different concepts. The book will appeal not only to students and teachers at school and university but also to readers with a general scientific interest and to researchers studying soap films. For the most part simple school mathematics is used. Sections containing more advanced mathematics have been placed in boxes or appendices and can be omitted by readers without the appropriate mathematical background. The text is supported with Over 100 diagrams and photographs. Details of practical experiments that can be performed using simple household materials. Computer programs that draw some of the more complicated figures or animate sequences of soap film configurations. A bibliography for readers wishing to delve further into the subject. David Lovett is a lecturer in physics at the University of Essex. His research interests include Langmuir-Blodgett thin films and the use of models as teaching aids in physics. He has been interested in soap films since 1978 and has made a number of original contributions to the subject particularly in the use of models which change their dimensions and their analogy with phase transitions. He has published three other books including *Tensor Properties of Crystals* Institute of Physics Publishing 1989. John Tilley is also a lecturer in physics at the University of Essex with research interests in theoretical solid state physics and soap films. He is coauthor of *Superfluidity and Superc* **The Ancestry of Regional Spatial Planning** Louis C.

Wassenhoven, 2018-09-20. This book is not a historical or archaeological treatise but rather a study in which the author looks at the past not as a historian but as a planner who has the ambition to unravel the early manifestations of his discipline, a discipline which did not exist as such in remote periods but the ingredients of which were nevertheless present. The author has observed the past equipped with knowledge and understanding of what regional planning was in the second half of the twentieth century and still is. He stands in the period of the first decades after the Second World War which were the formative years of regional planning and looks back at bygone ages. He discusses ideas and literature from the immediate post-war period in order to examine the ancestry of regional planning through their lens. The book will attract a broad range of readers because of its approach and its wide coverage of historical periods and world regions. Although Europe is the main focus, the book contains material on all continents and all periods: the ancient world, the medieval age and the modern era. The history of Urban Planning is taught and researched widely but the history or pre-history before the twentieth century of Regional Spatial Planning is not. This book will fill that vacuum. *Minds and Machines* Michael R. W. Dawson, 2008-04-15.
