Legal Power and Legal Competence Gonzalo Villa-Rosas, Torben Spaak, 2023-07-11 This volume explores the concepts of legal power and legal competence in fourteen original cutting edge chapters by leading legal theorists Legal power and legal competence are major topics in jurisprudence as they concern a range of practices common to all modern legal systems that empower individuals to bring about changes in the respective system by changing their own legal position or the legal positions of others This compilation covers five broad themes The chapters in the first section address open questions on the meaning of legal power and legal competence while those in the second tackle problems regarding their normativity The third section is devoted to specifically exploring the relationship between legal power and constitutive norms The fourth focuses on the analysis of legal officials and legal offices while the fifth and final section assesses various theories of legal power and legal competence

R.G. Collingwood An Introduction Peter Johnson, 1998-01-01 Why should modern philosophers read the works of R G Collingwood His ideas are often thought difficult to locate in the main lines of development taken by twentieth century philosophy Some have read Collingwood as anticipating the later Wittgenstein others have concentrated exclusively on the internal coherence of his thought This work aims to introduce Collingwood to contemporary students of philosophy through direct engagement with his arguments It is a conversation with Collingwood that takes as its subject matter the topics that interested him philosophy and method philosophy of mind language and logic the historical imagination art and expression action metaphysics and life and which still preoccupy us today the first introductory book on

this major modern philosopher includes critical investigation of his thought there is no similar work available Dictionary of Modern American Philosophers John R. Shook, 2005-01-01 The Dictionary of Modern American Philosophers includes both academic and non academic philosophers and a large number of female and minority thinkers whose work has been neglected It includes those intellectuals involved in the development of psychology pedagogy sociology anthropology education theology political science and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading While all the major post Civil War philosophers are present the most valuable feature of this dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought *Methodology for the Human Sciences* Donald E. Polkinghorne, 1984-06-30 Methodology for the Human Sciences addresses the growing need for a comprehensive textbook that surveys the emerging body of literature on human science research and clearly describes procedures and methods for carrying out new research strategies It provides an overview of developing methods describes their commonalities and variations and contains practical information on how to implement strategies in the field In it Donald Polkinghorne calls for a renewal of debate over which methods are appropriate for the study of human beings proposing that the results of the extensive changes in the philosophy of science since 1960 call for a reexamination of the original issues of this debate The book traces the history of the deliberations from Mill and Dilthey to Hempel and logical positivism examines recently developed systems of inquiry and their importance for the human sciences and relates these systems to the practical problems of doing research on topics related to human experience It discusses historical realism systems and structures phenomenology and hermeneutics action theory and the implications recent systems have for a revised human science methodology **Philosophy of Language and the Challenge to Scientific Realism** Christopher Norris, 2004-06-02 In this book Christopher Norris develops the case for scientific realism by tackling various adversary arguments from a range of anti realist positions Through a close critical reading he shows how they fail to make adequate sense on any rational consistent and scientifically informed survey of the evidence Along the way he incorporates a number of detailed case studies from the history and philosophy of science Norris devotes much of his discussion to some of the most prominent and widely influential source texts of anti realism Also included are the sophisticated versions of verificationism developed albeit in very different ways by thinkers such as Michael Dummett and Bas van Fraassen Central to Norris's argument is a prolonged engagement with the once highly influential but nowadays neglected work of Norwood Russell Hanson This book will be welcomed especially by readers who possess some knowledge of the background debate and who wish to deepen and extend

their understanding of these issues beyond an introductory level

Richard Kearney, 2003-12-23 Continental philosophy as it has emerged in the twentieth century is less a seamless fabric than a patchwork of diverse strands Phenomenology hermeneutics existentialism structuralism critical theory deconstruction these are some of the salient movements which have developed in continental Europe between 1900 and the 1990 s though their influence is by no means confined to geographic location Continental thought has proved highly exportable circulating far beyond the frontiers of Europe to provoke strong responses in the intellectual world at large The fifteen articles in this volume outline and assess some of the issues and experiments of continental philosophy The first five span the twin movements of phenomenology and existentialism running from Husserl and Heidegger to Sartre Merleau Ponty and Levinas Subsequent essays deal with specific currents of continental thought in such areas as science Marxism linguistics politics aesthetics feminism and hermeneutics A final chapter on postmodernism highlights the manner in which so many concerns of continental thought culminate in a radical anti foundationalism This volume provides a broad scholarly introduction to this period for students of philosophy and related disciplines as well as some original interpretations of these authors It includes a glossary of technical terms and a chronological tube of philosophical scientific and other cultural events

Francis Bacon's Skeptical Recipes for New Knowledge Jagdish Hattiangadi, 2024-03-30 The book sets an ambitious goal It devises a new account of scientific methodology that makes it possible to explain how scientists manage at least occasionally to find true models of reality The new methods may be contrasted with all those currently available that employ coherence theories of knowledge Under this designation are grouped positions that can seem very different such as those of Poincaré Duhem Popper Hempel Quine Kuhn and Feyerabend but are united by the idea that the most general statements of science are merely hypotheses They may be conjectures opinions conventions posits paradigms or even myths The most we can claim to know from such generalities is that they are internally consistent and coherent with empirical data Consistency is insufficient to establish the truth of a conceptual system because many different systems perhaps an infinite number can be logically consistent and cohere with recorded data Such is the well known

problem of the empirical underdetermination of theories Francis Bacon's Skeptical Recipes for New Knowledge suggests a new methodology that solves this fundamental problem of knowledge
