**Federalism of Wetlands** Ryan W. Taylor, 2014-07-17 This book investigates the consequences of redundant state and federal environmental regulations in the United States Drawing on the most exhaustive statistical analysis of US federal wetland permits ever constructed the book uncovers the disjointed world of wetland regulation The author starts by examining the socioeconomic and environmental factors driving individuals to apply for environmental regulatory permits and the regional inconsistencies encountered in federal environmental regulatory program performance The book goes on to demonstrate that states have more power in federal relationships than scholars often believe and that individual state policies are important even in a time of strong federal governance Evidence shows that such intergovernmental redundancy serves to increase overall regulatory program effectiveness This book breaks new ground in the subjects of federalism and environmental regulation by rejecting the traditional approach of picking winners and losers in favour of a nuanced demonstration of how redundancy and collaboration between different levels of governance can make for more effective governmental programs The book is also innovative in its use of the perspectives of regulated citizens not as a point of judgment but as a means of introducing a constructive new way of thinking about political and administrative boundaries within a federalist system of governance The book provides relevant context to wider political debates about excessive and duplicative regulatory oversight and will be of interest to Environmental Policy students and administrators

Sustainability and the Rights of Nature Cameron La Follette, Chris Maser, 2017-06-01 Sustainability and the Rights of Nature An Introduction is a much needed guide that addresses the exciting and significant paradigm shift to the Rights of Nature as it is occurring both in the United States and internationally in the fields of environmental law and environmental sustainability This shift advocates building a relationship of integrity and reciprocity with the planet by placing Nature in the forefront of our rights based legal systems The authors discuss means of achieving this by laying out Nature's Laws of Reciprocity and providing a roadmap of the strategies and directions needed to create a Rights of Nature oriented legal system that will shape and maintain human activities in an environmentally sustainable manner This work is enriched with an array of unique and relevant points of reference such as the feudal notions of obligation principles of traditional indigenous cultivation the Pope Francis Encyclical on the

environment and the new Rights of Nature based legal systems of Ecuador and Bolivia that can serve as prototypes for the United States and other countries around the world to help ensure a future of environmental sustainability for all living systems      National Urban Recreation Study United States.
