Regulating Danger:

Regulating Danger James Whiteside, 1990-01-01 From the 1880s to the 1980s more than eight thousand workers died in the coal mines of the Rocky Mountain states Sometimes they died by the dozens in fiery explosions but more often they died alone crushed by collapsing roofs or runaway mine cars Many old timers in coal mining communities and even some historians have blamed the high fatality rate on ruthless coal barons exploiting miners in the single minded pursuit of profit The coal industry preferred to blame careless miners James Whiteside looks beyond those charges in seeking to explain why the western coal mines were and to some degree still are dangerous and why territorial state and federal laws failed for so long to make them safer Regulating Danger is the first extended study of the coal mining industry in Colorado New Mexico Utah Wyoming and Montana It exceeds the scope of traditional labor history in focusing on working conditions and the problems of workers instead of unions and strikes After examining the inherent physical dangers of the work Whiteside shows how the interplay of economic social and technological forces created an environment of death in the western coal mines He goes on to discuss evolving industrial and political attitudes toward issues of responsibility for mine safety and government regulation and the fundamental changes in the industry that brought about safer working conditions

Regulating Risk Rebecca L. Perlman, 2023-03-30 When governments impose stringent regulations that impede domestic competition and international trade should we conclude that this is a deliberate attempt to protect industry or an honest effort to protect the population Regulating Risk offers a third possibility that these regulations reflect producers ability to exploit private information Combining extensive data and qualitative evidence from the pesticide pharmaceutical and chemical sectors the book demonstrates how companies have exploited product safety information to win stricter standards on less profitable products for which they offer a more profitable alternative Companies have additionally supported regulatory institutions that while intended to protect the public also help companies use information to eliminate less profitable products more systematically creating barriers to commerce that disproportionately disadvantage developing countries These dynamics play out not only domestically but also internationally under organizations charged with providing objective regulatory recommendations The result has been the global legitimization of biased regulatory rules **Governing**

Risks in Modern Britain Tom Crook, Mike Esbester, 2016-04-26 For more than 200 years everyday life in Britain has been beset by a variety of dangers from the mundane to the life threatening Governing Risks in Modern Britain focuses on the steps taken to manage these dangers and to prevent accidents since approximately 1800 It brings together cutting edge research to help us understand the multiple and contested ways in which dangers have been governed It demonstrates that the category of risk broadly defined provides a new means of historicising some key developments in British society Chapters explore road safety and policing environmental and technological dangers and occupational health and safety The book thus brings together practices and ideas previously treated in isolation situating them in a common context of risk related debates

dilemmas and difficulties Doing so it argues advances our understanding of how modern British society has been governed and helps to set our risk obsessed present in some much needed historical perspective *Risk Assessment and Risk Management* R E Hester,R M Harrison,2007-10-31 Risk assessment is considered by many analysts to be an objective scientific tool It is considered to be variously influenced by broader issues which in turn have important practical implications both for risk assessors and decision makers Risk Assessment and Risk Management examines a range of practical applications of risk assessment methods and risk management procedures in the broad context of environmental science and technology Written by acknowledged experts in the field the articles cover a variety of areas with reference to subjects as diverse as BSE the use of risk assessment in government using computer modelling as an aid to risk assessment in the case of accidental contamination of rivers and estuaries quantitative cancer risk assessment related to carcinogens in the environment landfilling of household wastes environmental risk assessment and management of chemicals and aquatic risk assessment and management of pesticides This book provides a detailed and wide ranging review of the many aspects of risk assessment and risk management which have excited so much debate and controversy in recent times It will be essential reading for all those involved in the assessment and management of risk particularly in the context of environmental science

Regulation and Risk Bridget M. Hutter,2001 This study examines the impact of a system of enforced self regulation on the corporate life of British Railways The book raises important questions about how workplace risks are managed and what influence the law can have **Regulating Risks in the European Union** Maria Weimer,Anniek de Ruijter,2017-10-05 A growing body of EU law and regulation is preoccupied with the protection of EU citizens from health and environmental risks Which chemicals are safe and should be allowed on the market How should the EU respond to public health emergencies such as Ebola and other infectious diseases Regulatory responses to these questions confront deep uncertainty limited knowledge and societal contestation In a time where the use of scientific expertise in EU policy making is particularly contested this book offers a timely contribution to both the academic and policy debate on the role of specialised expertise in EU public decision making on risk and technology as well as on its intertwinement with executive power It draws on insights from law governance political sciences and science and technology studies bringing together leading scholars in this field Contributions are drawn together by a shared theoretical perspective namely by their use of co production as an analytical lens to study the intricate interplay between techno scientific expertise and EU executive power By so doing this collection produces highly original insights into the development of the EU administrative state as well as into the role of regulatory science in its construction This book will be useful to scholars practitioners and policy makers working on risk regulation and the role of expertise in public decision making **Danger Signals Triggering Immune Response and Inflammation** Abdulraouf Ramadan,Walter G. Land,Sophie Paczesny,2017-09-18 The immune system detects danger through a series of what we call pathogen associated molecular patterns PAMPs or damage associated molecular pattern molecules DAMPs

working in concert with both positive and negative signals derived from other tissues PAMPs are molecules associated with groups of pathogens that are small molecular motifs conserved within a class of microbes They are recognized by Toll like receptors TLRs and other pattern recognition receptors A vast array of different types of molecules can serve as PAMPs including glycans and glycoconjugates Bacterial lipopolysaccharides LPSs endotoxins found on the cell membranes of Gram negative bacteria are considered to be the prototypical class of PAMPs LPSs are specifically recognized by TLR4 a recognition receptor of the innate immune system Other PAMPs include bacterial flagellin recognized by TLR5 lipoteichoic acid from Gram positive bacteria peptidoglycan and nucleic acid variants normally associated with viruses such as double stranded RNA recognized by TLR3 or unmethylated CpG motifs recognized by TLR9 DAMPs also known as alarmins are molecules released by stressed cells undergoing necrosis that act as endogenous danger signals to promote and exacerbate the immune and inflammatory response DAMPs vary greatly depending on the type of cell epithelial mesenchymal etc and injured tissue Some endogenous danger signals include heat shock proteins HMGB1 high mobility group box 1 reactive oxygen intermediates extracellular matrix breakdown products such as hyaluronan fragments neuromediators and cytokines like the interferons IFNs Non protein DAMPs include ATP uric acid heparin sulfate and DNA Furthermore accumulating evidence supports correlation between alarmins and changes in the microbiome Increased serum or plasma levels of these DAMPs have been associated with many inflammatory diseases including gastric and intestinal inflammatory diseases graft versus host disease GVHD sepsis and multiple organ failure allergies particularly in the lungs atherosclerosis age associated insulin resistance arthritis lupus neuro inflammation degeneration and more recently in tumors which is particularly interesting with the emergence of immunotherapies Therapeutic strategies are being developed to modulate the expression of these DAMPs for the treatment of these diseases A vast number of reviews have already been published in this area thus in an effort to not duplicate what has already been written we will focus on recent discoveries particularly in disease models that are epidemic in Western society intestinal chronic inflammatory diseases including GVHD and its relationship with the microbiome chronic infectious diseases allergies autoimmune diseases neuroinflammation and cancers We will also focus on the basic cellular roles of macrophages T cells and B cells This research topic brings together sixteen articles that provide novel insights into the mechanisms of action of DAMPS alarmins and their regulation and subsequent immunologically driven responses

Scientists and the Regulation of Risk David Demortain, 2011-10-01 Risks are increasingly regulated by international standards and scientists play a key role in standardisation This fascinating book exposes the action of invisible colleges of scientists loose groups of prominent scientific experts who combine practical experience of risk and control with advisory responsibility in the formulation of international standards Drawing upon the domains of medicines novel foods and food hygiene David Demortain investigates new regulatory concepts emerging from invisible colleges highlighting how they shape consensus and pave the way for international

Risk Regulation at Risk Sidney Shapiro, Robert

Glicksman,2002-09-25 In the 1960s and 1970s Congress enacted a vast body of legislation to protect the environment and individual health and safety Collectively this legislation is known as risk regulation because it addresses the risk of harm that technology creates for individuals and the environment In the last two decades this legislation has come under increasing attack by critics who employ utilitarian philosophy and cost benefit analysis The defenders of this body of risk regulation by contrast have lacked a similar unifying theory In this book the authors propose that the American tradition of philosophical pragmatism fills this vacuum They argue that pragmatism offers a better method for conceiving of and implementing risk regulation than the economic paradigm favored by its critics While pragmatism offers a methodology in support of risk regulation as it was originally conceived it also offers a perspective from which this legislation can be held up to critical appraisal The authors employ pragmatism to support risk regulation but pragmatism also leads them to agree with some of the criticisms against it and even to level new criticisms of their own In the end the authors reject the picture painted by risk regulation s critics of widely excessive and irrational regulation but the pragmatic perspective also leads them to propose a number of recommendations for useful reforms to risk regulation *Risk Regulation in the Internal Market* Maria

Weimer,2019-03-19 This book offers a topical inquiry into the legal and political limits of EU regulation in the field of risk and new technologies surrounded by techno scientific complexity uncertainty and societal contestation It uses agricultural biotechnology as a paradigmatic example to illustrate the complex intertwinement between environmental public health economic and social concerns in risk regulation Weimer analyses the drawbacks of the EU approach to agricultural biotechnology showing that its reductionism i e the narrow understanding of GMO risks as well as the exclusion of broader societal concerns related to environmental and social sustainability has undermined both the legitimacy and effectiveness of EU regulation in this area Resistance to this approach however has also triggered legal innovations prompting us to re think EU internal market law including the way in which it manages the tensions between unity and diversity and between social and economic concerns This text offers fresh and original insights into how far the EU can go in harmonizing regulatory approaches to risk At the same time it proposes new ways of re thinking EU risk regulation to make it more responsive to different perspectives on risk and technology A unique feature of this book is that it contributes to various strains of scholarship including risk regulation internal market law public administration and studies of governance and regulation as well as connecting these themes to broader debates about the legitimacy of European integration and new ways of differentiated integration As a result it assists in re imagining the EU internal market and its regulation as a site of diversity

Transnational Narratives and Regulation of GMO Risks Giulia Claudia Leonelli,2021-11-04 This book provides an innovative insight into the regulatory conundrum of genetically modified organisms GMOs deploying transnational legal analysis as a methodological framework to explore the most controversial area of risk governance The book deconstructs hegemonic and counter hegemonic transnational narratives on the governance of GMO risks cutting across US law EU law

the WTO Agreement on Sanitary and Phytosanitary Measures and hybrid standard setting regimes Should uncertain risks be run unless adverse effects have been conclusively established and should regulators only act where this is cost benefit effective Should risk managers make a convincing case that a product or process is safe enough for the relevant uncertain risks to be socially acceptable How can intractable transnational regulatory conflicts be solved The book complements a close analysis of regulatory frameworks and case law with a more encompassing perspective on the political socio economic and distributional implications of different approaches to the regulation of health and environmental risks at times of globalisation The GMO deadlock thus becomes a lens through which to investigate the underlying value systems goals and impacts of transnational discourses on risk governance Against this backdrop the normative strand of analysis points to the limited ability of science and procedural deliberation to generate authentic agreement and to identify normatively legitimate solutions in the absence of pre existing shared perspectives

Risk Regulation, Science, and Interests in Transatlantic Trade Conflicts D. Hornsby, 2013-10-16 When regions like Canada the US and the EU have disagreed over the legitimacy of risk perceptions they have placed science at the centre of international trade conflict By looking across cases disputed and informally resolved David Hornsby offers to deepen understanding of factors involved in risk based trade conflict

Better Business Regulation in a Risk Society Alberto Alemanno, Frank den Butter, André Nijssen, Jacopo Torriti, 2012-09-14 The premise of this volume is that business regulations are expected to grow in the near future as a consequence of the emergence of a world risk society Risks related to terrorism climate change and financial crises for example will penetrate all conditions of life Increasingly the decisions and actions of some bring about risks for many in this era of globalization Controlling these risks implies managing the world through high quality regulation with a particular emphasis on businesses and financial institutions Central to this approach is the argument that a major if not the primary aim of regulation is to internalize externalities or in a broader context to repair market failure Such repair can only be accomplished when the costs are smaller than the welfare gains Featuring contributions from researchers and policy analysts from the fields of economics management law sociology political science and environmental policy this book focuses on three major topics Social risks and business regulation Preconditions for better business regulation Theoretical issues related to better business regulation Collectively the authors demonstrate that the easier it is for regulated businesses to comply at the lowest costs possible without jeopardizing the related public goals the greater the degree of compliance When successful the net result is a balance of individual and collective net benefits and by further implication sustainable business practice and economic growth

Anticipating Risks and Organising Risk Regulation Bridget M. Hutter, 2010-08-05 Anticipating risks has become an obsession of the early twenty first century Private and public sector organisations increasingly devote resources to risk prevention and contingency planning to manage risk events should they occur This 2010 book shows how we can organise our social organisational and regulatory policy systems to cope better with the array of local and transnational risks we

regularly encounter Contributors from a range of disciplines including finance history law management political science social psychology sociology and disaster studies consider threats vulnerabilities and insecurities alongside social and organisational sources of resilience and security These issues are introduced and discussed through a fascinating and diverse set of topics including myxomatosis the 2012 Olympic Games gene therapy and the financial crisis This is an important book for academics and policy makers who wish to understand the dilemmas generated in the anticipation and management of risks

Risk Regulation and Administrative Constitutionalism Elizabeth Fisher, 2007-07-30 Over the last decade the regulatory evaluation of environmental and public health risks has been one of the most legally controversial areas of contemporary government activity Much of that debate has been understood as a conflict between those promoting scientific approaches to risk evaluation and those promoting democratic approaches This characterization of disputes has ignored the central roles of public administration and law in technological risk evaluation This is problematic because as shown in this book legal disputes over risk evaluation are disputes over administrative constitutionalism in that they are disputes over what role law should play in constituting and limiting the power of administrative risk regulators This is shown by five case studies taken from five different legal cultures an analysis of the bifurcated role of the Southwood Working Party in the UK BSE crisis the development of doctrines in relation to judicial review of risk evaluation in the US in the 1970s the interpretation of the precautionary principle by environmental courts and generalist tribunals carrying out merits review in Australia the interpretation of the WTO Sanitary and Phytosanitary Agreement as part of the WTO dispute settlement process and the interpretation of the precautionary principle in the EU context A strong argument is thus made for re orienting the focus of scholarship in this area

Risk Regulation in the United States and European Union A. Luedtke, L. Svedin, Thad E. Hall, 2010-06-07 Globalization and technology have altered public fears and changed expectations of how government should make people safer This book analyzes how Europeans and Americans perceive and regulate risk The authors show how public fears about risk are filtered through political systems to pressure governments to insure against risk

RISK21 - Coping with Risks due to Natural Hazards in the 21st Century Walter J. Ammann, Stefanie Dannenmann, Laurent Vulliet, 2006-08-17 Over the last two decades there has been an increase in the number of natural hazards which have culminated in catastrophic consequences severely impacting on people and livelihoods In response to this escalation the Swiss Natural Hazards Competence Centre CENAT organized a workshop entitled RISK21 at the Centro Stefano Franscini

Mon **Science and Risk Regulation in International Law** Jacqueline Peel, 2010-11-04 The regulation of risk is a preoccupation of contemporary global society and an increasingly important part of international law in areas ranging from environmental protection to international trade This book examines a key aspect of international risk regulation the way in which science and technical expertise are used in reaching decisions about how to assess and manage global risks An interdisciplinary analysis is employed to illuminate how science has been used in international legal processes and global

institutions such as the World Trade Organization Case studies of risk regulation in international law are drawn from diverse fields including environmental treaty law international trade law food safety regulation and standard setting biosafety and chemicals regulation The book also addresses the important question of the most appropriate balance between science and non scientific inputs in different areas of international risk regulation

OECD Reviews of Regulatory Reform Risk and Regulatory Policy Improving the Governance of Risk OECD,2010-04-09 This publication presents recent OECD papers on risk and regulatory policy They offer measures for developing or improving coherent risk governance policies

Managing Regulation Martin Lodge,Kai Wegrich,2012-06-29 Regulation has become a central aspect of contemporary governance as a result of public management reforms over recent decades Yet for all its ubiquity the ideas of regulation have become increasingly contested Key failures in the regulation of areas such as financial markets nuclear power and food safety have revealed limitations in strategies which were once praised as offering superior problem solving solutions This major new text introduces the issues which affect the design and operation of regulatory regimes and assesses the different regulatory strategies which can be used to deal with real world challenges In doing so it examines the most important areas in regulatory policy and reform including rule making and enforcement better regulation infrastructure regulation international regulation and risk regulation Throughout the book Martin Lodge and Kai Wegrich discuss a range of hypothetical and real world examples to illustrate key issues options and trade offs and to encourage readers to think critically and creatively about the regulatory options which are available Drawing on the most up to date research this text provides a clear and useful toolkit for thinking analytically about regulation
